**Handbook of Terahertz Technologies** Ho-Jin Song, Tadao Nagatsuma, 2015-04-15 Terahertz waves, which lie in the frequency range of 0.1–10 THz, have long been investigated in a few limited fields, such as astronomy, because of a lack of devices for their generation and detection. Several technical breakthroughs made over the last couple of decades now allow us to radiate and detect terahertz waves more easily, which has triggered the search for new uses of terahertz waves in many fields, such as bioscience, security, and information and communications technology. The book covers some of the

technical breakthroughs in terms of device technologies. It discusses not only the theoretical details and typical features of the technology described, but also some issues and challenges related to it. In addition, it is shown what can actually be done with the terahertz-wave technologies by introducing several successful demonstrations, such as wireless communications, industrial uses, remote sensing, chemical analysis, and 2D/3D imaging.

The result is a sweeping tale that reveals how these astonishing performers were outsiders who used magic to escape class, challenge conventions, transform popular culture, explore the innermost workings of the human mind, and inspire scientific discovery. Their incredible stories are complemented by more than 100 never-before-seen photographs of artifacts from Copperfield's exclusive Museum of Magic, including a sixteenth-century manual on sleight-of-hand; Houdini's straitjackets, handcuffs, and water torture chamber; Dante's famous sawing-in-half apparatus; Alexander's high-tech turban that allowed him to read people's minds; and even some coins that may have magically passed through the hands of Abraham Lincoln. By the end of the book, you'll be sure to share Copperfield's passion for the power of magic. --
