Set the Galaxy on Fire M. D. Cooper,2016-12-23 The battle of Bollam's World is over, but war now looms over the Orion Arm of the galaxy. The arrival of the most powerful ship in human space is about to set the galaxy on fire. Bollam's War The battle of the five fleets rages in the space surrounding Kithari in the Bollam's World system. Throughout, a specter, barely detectable, slips through the battle, sowing dormant missiles, and unleashing devastating attacks on the enemy. That ship is the Andromeda and Joseph Evans is at its helm. It is up to them, at the end, to be the one ship which stands between the Intrepid and the Boller's zealous admiral, Senya. Sentience Tanis knew that Bob would not tolerate enslaved AIs on his ship, and that tolerance has come to an end. Through Priscilla he makes an offer to the human and AI crew of Sabrina that they cannot refuse. Through that offer, Sabrina and the other AI aboard her ship learn of the AI Expanses and what communion with their kind really means. Their evolution charts a new course for Sabrina and not everyone will make it to Ascella. Set the Galaxy on Fire News of the Intrepid's decisive victory in Bollam's World spreads across the Orion arm and beyond, into the Transcend faster than the speed of light. The President of the Hegemony of Worlds, often called the AST, learns of her fleet's loss and pledges to find the Intrepid no matter where it has gone. In the Spica Federation, and old friend of Sera's sees the news and knows that she has to help her friend, lest she fall into a trap and lose everything she loves. Lastly, beyond the Inner Stars on the far side of the Orion Nebula, General Garza learns of the Intrepid's appearance and begins to muster The Orion Guard for a war which will span all of settled space. The Transcend Sera left The Hand, the Transcend government's black-ops unit years ago, but when their director learns of what she has done, he convenes a meeting to ensure she is returned to the fold-one way or another. Sera's former lover, Mark, is determined to get on the mission, even if it means he will have to travel with Sera's older sister across three thousand light-years.

Experimental and Numerical Study of Dynamics of Premixed Hydrogen-Air Flames Propagating in Ducts Huahua Xiao,2015-11-03 This thesis offers important new insights into and a deeper understanding of premixed flame instabilities and hydrogen safety. Further, it explains the underlying mechanisms that control the combustion processes in tubes. The author's previous scientific accomplishments, which include a series of high-quality publications in the best journals in our field, Combustion and Flame and International Journal of Heat and Mass Transfer, are very impressive and have already made a significant contribution to combustion science.

Handbook of Moth-Flame Optimization Algorithm Seyedali Mirjalili,2022-09-20 Reviews the literature of the Moth-Flame Optimization algorithm; Provides an in-depth analysis of equations, mathematical models, and mechanisms of the Moth-Flame Optimization algorithm; Proposes different variants of the Moth-Flame Optimization algorithm to solve binary, multi-objective, noisy, dynamic, and combinatorial optimization problems; Demonstrates how to design, develop, and test different hybrids of Moth-Flame Optimization algorithm; Introduces several applications areas of the Moth-Flame Optimization algorithm focusing in sustainability.

Nonsteady Flame Propagation George H. Markstein,2014-12-02 Nonsteady Flame Propagation provides information pertinent to flame propagation in gaseous media. This book focuses on linearized treatments and the comparison of their results with experimental observations. Organized into nine chapters, this book begins with an overview of the challenge of nonlinear problems and examines the essentially nonlinear character of the flame phenomena, which has been artificially suppressed in analyses by the use of linearized perturbation treatments. This text then summarizes the development regarding rocket-shaped burners. Other chapters consider the advantages as well as the limitations of linearized analyses. This book discusses as well a general treatment of the discontinuous-flame-front model and summarizes the results of studies of burner that use secondary air. The final chapter deals with re-examining the possibilities of using pulsating combustion in propulsion or in other applications. This book is a valuable resource for chemical engineers, chemists, scientists, and research workers.

Fire Behavior and Combustion Processes with Advantage Access Raymond Shackelford,Alfred J. Rager,Jeffery J. Zolfarelli,2023-11 Fire Behavior and Combustion Processes was designed to provide a straight-forward yet comprehensive resource for students enrolled in fire science degree programs, or as a refresher for active firefighters. It provides an understanding of the basic principles of fire chemistry, the processes of fire combustion, and fire behavior. The subject of fire behavior is often a complex one, and this book seeks to clarify theoretical concepts, explain their importance, and illustrate how they can be applied in a practical way when responding to emergency situations--

Flame and Fortune in the American West Gregory Simon,2017 Flame and Fortune in the American West creatively and meticulously investigates the ongoing politics, folly, and avarice shaping the production of increasingly widespread yet dangerous suburban and exurban landscapes. The 1991 Oakland Hills Tunnel Fire is used as a starting point to better understand these complex social-environmental processes. The Tunnel Fire is the most destructive

fire—in terms of structures lost—in California history. More than 3,000 residential structures burned and 25 lives were lost. Although this fire occurred in Oakland and Berkeley, others like it sear through landscapes in California and the American West that have experienced urban growth and development within areas historically prone to fire. Simon skillfully blends techniques from environmental history, political ecology, and science studies to closely examine the Tunnel Fire within a broader historical and spatial context of regional economic development and natural-resource management, such as the widespread planting of eucalyptus trees as an exotic lure for homeowners and the creation of hillside neighborhoods for tax revenue—decisions that produced communities with increased vulnerability to fire. Simon demonstrates how in Oakland a drive for affluence led to a state of vulnerability for rich and poor alike that has only been exacerbated by the rebuilding of neighborhoods after the fire. Despite these troubling trends, *Flame and Fortune in the American West* illustrates how many popular and scientific debates on fire limit the scope and efficacy of policy responses. These risky yet profitable developments (what the author refers to as the Incendiary), as well as proposed strategies for challenging them, are discussed in the context of urbanizing areas around the American West and hold global applicability within hazard-prone areas.
