Flash Math Creativity Jared Tarbell, Mary Ann Tan, Fay Rhodes, Keith Peters, Kip Parker, Connor McDonald, Ty Lettau, Brandon Williams, Paul Prudence, Ken Jokol, Pavel Kaluzhny, JD Hooge, David Hirmes, Gabriel Mulzer, 2013-12-16 It all revolves around Flash and math. It's what you do in your spare time: just take little ideas and mess around with them. This is a book of inspiration, beautiful enough to leave on the coffee table, but addictive enough to keep by your computer and sneak out while no-one's looking so you can go back to that movie that you were tinkering with 'til three o'clock this morning. It's a fun book. It's a book of iterative experiments, generative design. Each author does four experiments. Each experiment takes up four pages. We give you the code and explain the essence, then you take away your inspiration and run with it. The purpose of the book is to learn through experimentation because you are inspired to do so, not because someone is telling you to do so. Follow the [fmc](#) site link for more information.

The European Arc Flash Guide Mike Frain CEng FIET MCMI, 2021-09-20 This book is essential reading for anyone responsible for designing or putting workers to task on, or near, large power electrical systems. This is especially relevant where local health and safety law uses a risk-based approach to electrical safety such as in Europe. It is based upon a bedrock of risk management methodology using the 4Ps of Predict, Prevent, Process and Protect to ensure that arc flash hazards are systematically identified, analysed, and prevented from causing harm. Each of the 4Ps are described in detail starting with a quantitative prediction of harm from the arc flash hazard and then a separate chapter on prevention based upon practical measures avoid or minimise harm set against a hierarchy of risk control measures. The chapter on process, policy and procedures gives advice on a methodical approach to creating rules and ensuring competence. Finally, the chapter on protection describes, as a last resort, how personal protective equipment can be selected, used, and maintained. This book is packed with the fruits of the author's vast experience and there is a chapter dedicated to myths and mysteries as well as separate chapters for electrical utilities, duty holders, service providers, contractors, legislation, and data collection.

Flash MX Application And Interface Design Connor McDonald, Paul Prudence, Gerald YardFace, Peter Aylward, Fay Rhodes, Robbie Shepherd, Ken Jokol, 2013-11-27 The days of Flash as a creative luxury are long gone. After months of downsizing, Flash creativity has been on a huge rationalization program. It is no longer enough to present animation in millions of colors and a hundred transparencies. It is no longer sufficient to provide interactivity and dynamism for their own sake. The purpose of this collection is to show how designers have taken Flash and made it work for its supper. What we discover is a series of creations that place Flash at the hub of cutting edge web content. The end result is a snapshot of Flash as the ideal medium. In these amazing examples, we see the software pushed to its limits to create unbeatable applications—a collapsible family tree, an interactive video learning system, and a drawing tool, capable of running online! Beyond this, we dip into the back-end capabilities to look at how to improve Flash still further. Some staple XML and PHP routines are brought in to add a bit of spice, while Flash's mysterious sharedObject command is hunted down and tamed to create a hybrid Tamagotchi houseplant—perfectly suited to lure surfers back to your website!

Flash Ironmaking H. Y. Sohn, 2023-03-08 This book addresses the two major issues faced by the modern steel industry: CO₂ emissions and energy consumption. The steel industry accounts for 6.7% of the anthropogenic CO₂ emissions and consumes 6% of the total energy consumed in manufacturing. In response to these critical issues, a new technology called flash ironmaking has been developed, aimed at producing iron directly from iron ore concentrate using gaseous reductants/fuels such as natural gas or hydrogen. This ironmaking technology takes advantage of the rapid reaction rate of fine particles and bypasses the palletization process. This book discusses the principles of flash ironmaking, laboratory experiments, and design and operation of a prototype flash reactor. Provides theories and principles of ironmaking and a novel ironmaking technology Includes laboratory experiments to establish the kinetic feasibility of flash ironmaking Covers the design and operation of a prototype flash reactor as well as the design of industrial-size flash ironmaking reactors Describes various cases of flow sheet development, which forms the basis for process analysis and simulation Presents economic analysis case studies Presenting a novel technology that addresses contemporary issues facing one of the largest manufacturing industries, this book is aimed at professionals and researchers in metallurgy, materials engineering, manufacturing engineering, and related disciplines.

Interfacial Mechanics Jane Wang, Dong Zhu, 2019-12-06 Understanding the characteristics of material contact and lubrication at tribological interfaces is of great importance to engineering researchers and machine designers. Traditionally, contact and lubrication are separately studied due to technical difficulties, although they often coexist in reality and they are actually on the same physical ground. Fast research advancements in recent years have enabled the development and application of unified models and numerical approaches to simulate contact and lubrication, merging their studies into the domain of Interfacial Mechanics. This book provides updated information based on recent research progresses in related areas, which includes new concepts, theories, methods, and results for contact and lubrication problems involving elastic or inelastic materials, homogeneous or inhomogeneous contacting bodies, using stochastic or deterministic models for dealing with rough surfaces. It also contains unified models and numerical methods for mixed lubrication studies, analyses of interfacial frictional and thermal behaviors, as well as theories for studying the effects of multiple fields on interfacial characteristics. The book intends to reflect the recent trends of research by focusing on numerical simulation and problem solving techniques for practical interfaces of engineered surfaces and materials. This book is written primarily for graduate and senior undergraduate students, engineers, and researchers in the fields of tribology, lubrication, surface engineering, materials science and engineering, and mechanical engineering.
