**Better Science Through Safety** Jack A. Gerlovich, Gary E. Downs, 1981 Following a brief description of the major components found effective in school safety programs (safety management, education, and services) and data on school accidents in Iowa, this book addresses various aspects of safety related to science instruction, emphasizing that responsibility for safety must be shared by both teacher and students. Areas discussed include: (1) legal liability (definition of pertinent terms, teacher responsibilities, and case studies); (2) eye protection; (3) safety issues and concerns in biology, chemistry and physics settings; (4) safety concerns, considerations, and measures related to field trips and associated activities, the physical plant, science facilities, student research projects, and handicapped students; and (5) accident/incident reporting systems. General and specific guidelines are provided for each of the major areas and related topics addressed. Appendices include checklists related to the areas, a chart of selected eye protectors, safety equipment (eye washes, safe pipettor, safe pipetting station, and a self-sterilizing inoculating loop), and general first-aid guidelines. **Flame-Retardant Polymeric Materials** Eli Pearce, 2012-12-06 Flammability has been recognized as an increasingly important social and scientific problem. Fire statistics in the United States (Report of the National Commission on Fire Prevention and Control. America Burning: 1973) emphasized the vast devastation to life and property--12,000 lives lost annually due to fire. and these deaths are usually caused by inhaling smoke or toxic gases: 300,000 fire injuries: 11.4 billion dollars in fire cost at which 2.7 billion dollars is related to property loss: a billion dollars to burn injury treatment: and 3.3 billion dollars in productivity loss. It is obvious that much human and economic misery can be attributed to fire situations. In relation to this, polymer flammability has been recognized as an increasingly important social and scientific problem. The development of flame-retardant polymeric materials is a current example where the initiative for major scientific and technological developments is motivated by sociological pressure and legislation. This is part of the important trend toward a safer environment and sets a pattern for future example. Flame retardancy deals with our basic everyday life situations-housing, work areas, transportation, clothing and so forth-the macroenvironment capsule within which homosapiens live. As a result, flame-retardant polymers are now emerging as a specific class of materials leading to new and diversified scientific and technological ventures.

**Physiology of Astroglia** Alexei Verkhratsky, Vladimir Parpura, 2015-03-01 Astrocytes can be defined as the glia inhabiting the nervous system with the main function in the maintenance of nervous tissue homeostasis. Classified into several types according to their morphological appearance, many of astrocytes form a reticular structure known as astroglial syncytium, owing to their coupling via intercellular channels organized into gap junctions. Not only do astrocytes establish such homocellular contacts, but they also engage in intimate heterocellular interactions with neurons, most notably at synaptic sites. As synaptic structures house the very core of information transfer and processing in the nervous system, astroglial perisynaptic positioning assures that these glial cells can nourish neurons and establish bidirectional communication with them, functions outlined in the concepts of the astrocytic cradle and multi-partite synapse, respectively. Astrocytes possess a rich assortment of ligand receptors, ion and water channels, and ion and ligand transporters, which collectively contribute to

astrocytic control of homeostasis and excitability. Astroglia control glutamate and adenosine homeostasis to exert modulatory actions affecting the real-time operation of synapses. Fluctuations of intracellular calcium can lead to the release of various chemical transmitters from astrocytes through a process termed gliotransmission. Sodium fluctuations are closely associated to those of calcium with both dynamic events interfacing signaling and metabolism. Astrocytes appear fully integrated into the brain cellular circuitry, being an indispensable part of neural networks.

**Tantra** Georg Feuerstein, Ph.D.,1998-07-28 A leading yoga researcher offers a clear and lively introduction to the history, philosophy, and practice of the Tantric spiritual tradition Tantra—often associated with Kundalini Yoga—is a fundamental dimension of Hinduism, emphasizing the cultivation of “divine power” (shakti) as a path to infinite bliss. Tantra has been widely misunderstood in the West, however, where its practices are often confused with eroticism and licentious morality. Tantra: The Path of Ecstasy dispels many common misconceptions, providing an accessible introduction to the history, philosophy, and practice of this extraordinary spiritual tradition. The Tantric teachings are geared toward the attainment of enlightenment as well as spiritual power and are present not only in Hinduism but also Jainism and Vajrayana Buddhism. In this book, Georg Feuerstein offers readers a clear understanding of authentic Tantra, as well as appropriate guidance for spiritual practice and the attainment of higher consciousness.

*Feasibility Study and Business Plan* Kathleen Peterson, 2020-05-12 Feasibility study and business plan Learn How to Present a Completed Feasibility Study A feasibility study is a thoroughly researched analysis of a plan or method. The purpose of a feasibility study is to determine and then communicate whether an action being considered is practical for a business or project. These studies usually contain detailed information about the financial structure for the plan and an analysis of the market with regards to the proposal (if needed). It also contains the suggested logistics for delivering a product or service, the resources you'll need, the personnel support and the organizational structure required. Presenting your feasibility study is just as important as the work you put into it. How to Assemble Your Feasibility Study How you present your final study is just as important as the information it contains. If you have a lot of material, organize it into a portfolio or binder. Finding information easily and quickly is important to executives, managers, lenders, and investors, so include tabs (type them if at all possible) to indicate each component in your study. Cover letters should not be generic but should be individualized depending upon with whom you are submitting the study. Before you submit your study, have someone else proofread it for you to check for content and errors. Typographical errors will make your study appear rushed or unprofessional, and if your descriptions and calculations do not make sense to the reader the action will be ruled unfeasible as presented. Although you write your conclusion last, it serves as a summary of the details in your study. You can place it at the end of your document (before any exhibits and attachments), but placing it after the table of contents sets the tone and highlights key issues for the reader to be aware of before they read the rest of the study.
