Flash Ironmaking H. Y. Sohn,2023-03-08 This book addresses the two major issues faced by the modern steel industry: CO₂ emissions and energy consumption. The steel industry accounts for 6.7% of the anthropogenic CO₂ emissions and consumes 6% of the total energy consumed in manufacturing. In response to these critical issues, a new technology called flash ironmaking has been developed, aimed at producing iron directly from iron ore concentrate using gaseous reductants/fuels such as natural gas or hydrogen. This ironmaking technology takes advantage of the rapid reaction rate of fine particles and bypasses the pelletization process. This book discusses the principles of flash ironmaking, laboratory experiments, and design and operation of a prototype flash reactor. Provides theories and principles of ironmaking and a novel ironmaking technology Includes laboratory experiments to establish the kinetic feasibility of flash ironmaking Covers the design and operation of a prototype flash reactor as well as the design of industrial-size flash ironmaking reactors Describes various cases of flow sheet development, which forms the basis for process analysis and simulation Presents economic analysis case studies Presenting a novel technology that addresses contemporary issues facing one of the largest manufacturing industries, this book is aimed at professionals and researchers in metallurgy, materials engineering, manufacturing engineering, and related disciplines.

Learning Flash Media Server 2 William Sanders, 2007-06-28 This unique PDF-only book is the ideal primer for web developers just getting started with Flash Media Server 2 (FMS2) and Adobe's Real-Time Messaging Protocol (RTMP) for streaming media, and for anyone doing administrative work with Flash-related content. It's not a reference, but a step-by-step guide for using Flash Media Server 2, with chapters that focus on specific aspects of the server and how they work. What makes Flash Media Server 2 so different? You'll discover that, in contrast to conventional web servers, FMS2 includes open-socket server technology that stays connected to stream audio, video, and text in real time. Connect to this server using RTMP, and build applications using three flavors of ActionScript: ActionScript 2.0, Client side ActionScript, and Server side ActionScript. Don't worry. With Learning Flash Media Server 2 and a little Flash and ActionScript experience, you'll be up to speed in no time. The first chapter takes you through the installation procedures on Windows and Linux, explains how to organize your development environment using Apache web server, how to test your FMS2 connections, and how to use the management console. Then you'll dive right into the whys and hows of: Recording and playing back streaming audio and video Camera and microphone settings Non-persistent client-side remote shared objects Two-way audio-video communications Broadcasting and server-side bandwidth control Working with server-side files: the file class Server-side shared objects Server-side audio and video streaming Server-side loadvars, xml and working with configuration files At the heart of every chapter is a core set of code that shows the minimum requirements needed for different procedures. IBM zEnterprise EC12 Technical Guide Octavian Lascu,Ivan Dobos,Wolfgang Fries,Hua Bin Chu,Luiz Fadel,Martijn Raave,Fernando Nogal, Frank Packheiser,Vicente Ranieri,Ewerson Palacio,Andre Spahni,Chen Zhu,Parwez Hamid,IBM Redbooks,2015-03-04 The popularity of the Internet and the affordability of IT hardware and software have resulted in an explosion of applications, architectures, and platforms. Workloads have changed. Many applications, including mission-critical ones, are deployed on various platforms, and the IBM® System z® design has adapted to this change. It takes into account a wide range of factors, including compatibility and investment protection, to match the IT requirements of an enterprise. This IBM Redbooks® publication addresses the new IBM zEnterprise® System. This system consists of the IBM zEnterprise EC12 (zEC12), an updated IBM zEnterprise Unified Resource Manager, and the IBM zEnterprise BladeCenter® Extension (zBX) Model 003. The zEC12 is designed with improved scalability, performance, security, resiliency, availability, and virtualization. The superscalar design allows the zEC12 to deliver a record level of capacity over the prior System z servers. It is powered by 120 of the world's most powerful microprocessors. These microprocessors run at 5.5 GHz and are capable of running more than 75,000 millions of instructions per second (MIPS). The zEC12 Model HA1 is estimated to provide up to 50% more total system capacity than the IBM zEnterprise 196 (z196) Model M80. The zBX Model 003 infrastructure works with the zEC12 to enhance System z virtualization and management. It does so through an integrated hardware platform that spans mainframe, IBM POWER7®, and IBM System x® technologies. Through the Unified Resource Manager, the zEnterprise System is managed as a single pool of resources, integrating system and workload management across the environment. This book provides information about the zEnterprise System and its functions, features, and associated software support. Greater detail is offered in areas relevant to technical planning. It is intended for systems engineers, consultants, planners, and anyone who wants to understand the zEnterprise System functions and plan for their usage. It is not intended as an introduction to mainframes. Readers are expected to be generally familiar with existing IBM System z® technology and terminology.
