Fleet Management and Logistics Teodor G. Crainic, Gilbert Laporte, 2012-12-06 TEODOR GABRIEL CRAINIC, DIRECTOR The Centre for Research on Transportation (C.R.T.) was founded in 1971 by the Universite de Montreal. From 1988 on, it is jointly managed by the Universite de Montreal and its affiliated schools, the Ecole des Hautes Etudes Commerciales and Ecole Poly technique. Professors, students and researchers from many institutions in the Montreal area join forces at the C.R.T. to analyze transportation, logistics and telecommunication systems from a multidisciplinary perspective. The C.R.T. pursues three major, complementary objectives: training of high-level specialists; the advancement of knowledge and technology; the transfer of technology towards industry and the public sector. Its main field of expertise is the development of quantitative and computer-based models and methods for the analysis of urban, regional and intercity transportation networks, as well as telecommunication systems. This applies to the study of passenger and commodity flows, as well as to the socioeconomic aspects of transportation: policy, regulation, economics. The twenty-fifth anniversary of the C.R.T. offered the opportunity to evaluate past accomplishments and to identify future trends and challenges. Five colloquia were thus organized on major research and application themes that also reflected our main research areas. They gathered together internationally renowned researchers who linked recent scientific and technological advances to modeling and methodological challenges waiting to be tackled, particularly concerning new problems and applications, and the increasingly widespread use of new technologies.

Federal Motor Vehicles U. S. Government Accountability Office (,2013-06 Pursuant to a congressional request, GAO reviewed the federal government's management of its motor vehicle fleet, focusing on: (1) obstacles to achieving cost-efficient fleet management; and (2) public and private fleet management practices that might be applicable to the federal fleet. GAO found that: (1) obstacles to cost-efficient federal fleet management include the lack of uniform guidance for conducting valid cost-comparison studies, insufficient vehicle information, unpredictable funding, and restrictive agency solicitations that limit private-sector competition; (2) in 1993, the Office of Management and Budget (OMB) issued uniform guidance for conducting valid cost-comparison studies in response to a task force recommendation; (3) most federal agencies continue to operate their fleets without complying with statutory requirements for cost-efficiency; (4) improving fleet management requires a cost-conscious culture; and (5) essential management practices for cost-effective fleet operation include assessing vehicle utilization to determine the appropriate size of the fleet, establishing a fleet operation baseline, having needed information and supporting management information systems to assess performance, comparing costs and performance with the best fleets, funding the fleet through a revolving fund, and centralizing fleet management responsibilities.

Guide to Calculating Ownership and Operating Costs of Department of Transportation Vehicles and Equipment Geoff Morrison,Elise Emil,Henry Canipe,Andy Burnham (Environmental scientist),2020 A central role of a state Department of Transportation (DOT) fleet manager is to maintain a clear understanding of the fleet's costs. This helps in tracking activities over time, comparing costs with other fleets, communicating with stakeholders, and effectively managing fleet assets. The TRB National Cooperative Highway Research Program's NCHRP Research Report 944: Guide to Calculating Ownership and Operating Costs of Department of Transportation Vehicles and Equipment: An Accounting Perspective provides a practical, logical, and transparent framework for conducting fleet cost accounting in state DOTs. The Guide focuses on the unique aspects of DOT fleets, although the principles in the Guide could be extended to any public fleet. Without a complete understanding of fleet costs, the fundamental functions of fleet managers--such as equipment replacement decisions, outsourcing decisions, and budget requests--are diminished. Ultimately, fleet managers need full confidence in their fleet cost numbers to have credibility with fleet stakeholders. The report is accompanied by a PowerPoint presentation summary.

Fleet Telematics Asvin Goel,2007-10-23 This book combines wireless telematics systems with dynamic vehicle routing algorithms and vehicle-positioning systems to produce a telematics-enabled information system that can be employed by commercial fleet operators for real-time monitoring, control, and planning. The book further presents a Messaging And Fleet Monitoring System and a Dynamic Planning System (DPS) that provides real-time decision support considering the current state of the transportation system.

Humanitarian Logistics R. Tomasini,L. Van Wassenhove,Luk Van Wassenhove,2009-02-19 Imagine planning an event like the Olympics. Now imagine planning the same event but not knowing when or where it will take place, or how many will attend. This is what humanitarian logisticians are up against. Oversights result in serious consequences for the victims of disasters. So they have to get it right, fast.
