Viable Project Business Clemens Dachs,2020-12-05 This book develops best practices for collaboration between teams within large organizations, and demonstrates how an optimal environment for teamwork can improve business processes. To do so, it analyzes the system dynamics of living organisms and applies the results to the business environment. The book employs a consistent approach, applying recent advances in molecular biology to the structure and design of large industrial organizations. These insights from molecular biology are used to define the requirements for a practicable business management system based on the ISO 9000 criteria. The outcome is a viable and feasible system that can be used to design large organizations, e.g. by manufacturers of industrial equipment. In addition, four case studies are used to show how such a biologically inspired system can be implemented to positively and significantly impact business.

Chances and Risks in Construction Management and Economics Christian Hofstadler,Markus Kummer,2021-06-20 The book outlines the processes of calculating and critically reviewing construction costs and times for clients and contractors in different project phases. Any project or structural analysis should yield accurate information on times, costs, and prices. The related database is more or less uncertain depending on project complexity and the circumstances of work performance. It is thus recommended to use ranges of key input parameters. This approach consistently considers uncertainties within a holistic project view, thus enhancing the plausibility and validity of specific values. Only the integration of probabilistic methods will allow for calculating and graphically representing the chance/risk ratio as a crucial project variable ultimately influencing the entire business. This book examines the systemic modeling and consideration of uncertainties when determining construction costs and times, and life-cycle costs. It contains detailed descriptions of other decision-making processes, including project preparation and planning (developer calculation, soil survey, cost estimate), work preparation (costing, pricing, construction time evaluation, resource identification, comparison of construction methods, bid analysis, contract award), and project execution (site logistics, construction method selection, construction process planning, work coordination, sourcing, determination of additional costs, trend analyses), as well as for project portfolio management as a tool relevant to all phases.

2020 Web Vision Robert D. Oberst,2001 At the dawn of a new millennium, faith in technology soared following the successful eradication of the potentially paralyzing Y2K bug. Young dot-coms with little experience and possessing few assets other than a concept, flourished boasting market values in the millions and even billions of dollars. Then reality settled in as the market crashed and over a hundred dot-coms perished. The highflying NASDAQ dropped over 60% and the longest economic expansion teetered on the brink of recession. Despite the disconcerting scenario, this was not the demise of the Web, but merely the conclusion of its innocent childhood or the first stage of meteoric growth. After all, the Web was only 10 years old. There were still trillions of dollars worth of opportunities, as the more rigorous applications waited to be accomplished. The Web is a revolutionary event, yet there is no evident vision of its future. This book projects the Web until the year 2020 and will interest anyone intrigued by the Web, but perplexed by its seemingly erratic course. The book clarifies the murky Web, showing how it will interconnect emerging digital technologies to revolutionize our home, work, and society. In short, 2020 Web Vision will relieve the future shock engendered by the Web. It will also be helpful to those interested in building new applications or investing in future technological enterprises.

The Act of Choosing Russell Foote Rhyne, 2003-09 Choosing: Selecting a path when reason cannot show which way to go Choosing pervades our lives, nourished by evolutionary roots that stretch back 4,000,000 years. It activates freedom and indexes social openness, and only the person who chooses can mature. One who chooses not to choose ignobly shuns responsibility and cannot honorably say, I. Choosing, central to initiative, sparks the economy that feeds earth's swollen population. Choosing works on policy issues that dispassionate reason cannot handle, and nothing less than good choosing will see us through these interesting times. However, the melding of reason with choosing gave our species its edge over all the other hominids Context matching theory helps us (voters, CEOs, legislators) choose well, by telling us the nature of the act of choosing. CM theory directly opposes DA's rational models, painting choosing as a swift, natural happening, basically intuitive and non-mystical. It exposes the prerequisites to good choosing. Theoretical = impractical? No way. There is nothing so practical as a good theory (Kurt Lewin), and Dr. Rhyne spends two thirds of this book exploring the many very practical, often revolutionary implications of his good theory. Do you want to choose better? Learn how you choose.

Financial Performance Rory Knight, Marc Bertoneche, 2000-11-28 Financial Performance presents the foundation concepts underlying the Senior Executive Programmes the Authors have taught together and separately over the last 15 years in Europe, Asia and North America. These programmes include The Oxford Advanced Management Programme The Oxford Senior Executive Finance Programme The INSEAD Advanced Management Programme The IMI, Geneva, Advanced Management Programme The Harvard Advanced Management Programme The Oxford International Executive Programme, Singapore The IMI International Finance Programme, Singapore The book is intended as a reference manual as well as a textbook and will be of value to anyone with an interest in financial performance - particularly senior executives. The developments in modern finance over the last two decades have considerable implications for the way senior executives think about the finance discipline. It is no longer enough to have a rudimentary knowledge of basic finance and a heavy reliance on financial specialists. CEOs of course need excellent financial professionals - however they need to go beyond this and provide strategic leadership. This requires a conceptual framework for dealing with financial matters. This book provides a description of the underlying ideas and will be of value to anyone with an interest in financial performance -

particularly senior executives. This book revolves around the concept of value and it is organised into two parts. Part I Performance Measurement Consists of three chapters, all of which focus on the real and fairly complex set of financial statements of DaimlerChrysler AG. The first two chapters provide a detailed guided tour of the financial statements which deconstruct the complexity and then reconstruct the financials to provide a clearer base for analysis. These chapters have been arranged to deal with each line item of financial statements which have been highlighted in such a way to allow the reader to treat the materials as a reference as well as a sequential read. Chapter three presents a framework for evaluating financial health and introduces a cash flow based model for understanding the short and medium term constraints on a firm's growth. This exposition revolves around the concept of sustainable growth. Part 2 Valuation In the second part of the book chapter 4 introduces the cost of capital concept followed by chapter 5 which provides a general source of reference for valuation and a variety of difference applications. Chapter 6 concludes the book with a review of concept of shareholder value from a European perspective. Rory Knight MA(Oxon), MCom, PhD, CA Dean (Emeritus), Templeton College, University of Oxford For the last five years Rory has been Dean of Templeton College, the University of Oxford's business college. During this time he led the Oxford Advanced Management Programme and he created the Oxford Senior Executive Finance Programme. He has considerable experience in business and management development. He is actively involved in briefing the senior executives of leading companies on issues in Finance and Strategy. Prior to coming to Oxford Dr Knight was the deputy director of a foundation within the Swiss National Bank (SNB) and previously a Professor in Finance at IMI, Geneva & IMD, Lausanne. Marc Bertoneche MA, MBA, DBA, Phd Visiting Professor, Harvard Business School Marc is a Professor in Business Administration at the University of Bordeaux and has been on the faculty at INSEAD, the European Institute of Business Administration in Fontainebleau France for more than twenty years. His areas of interest include corporate and financial strategy, mergers and acquisitions, venture capital, financial markets, corporate ownership and governance, risk management and international finance. Net zero energy buildings Karsten Voss, Eike Musall, 2012-12-10 Net zero energy buildings, equilibrium buildings or carbon neutral cities – depending on location and the reasons for making the calculation, the numbers are run differently. The variety of terms in use indicates that a scientific method is still lacking – which is a problem not just in regard to international communication, but also with respect to planning processes as a response to energy challenges. The clarification and meaning of the most important terms in use is extremely important for their implementation. Since October 2008, a panel of experts from an international energy agency has concerned itself with these topics as part of a project entitled “Towards Net Zero Energy Solar Buildings”. The objective is to analyse exemplary buildings that are near a zero-energy balance in order to develop methods and tools for the planning, design and operation of such buildings. The results are documented in this publication: In addition to the presentation of selected projects, it is not just architectural showcase projects that are shown – the focus is on relaying knowledge and experience gained by planners and builders. Even if many questions remain unanswered: Project examples that have already been implemented prove on a practical basis that the objective of a zero energy balance is already possible today.
