*Reinforcement Learning, second edition* Richard S. Sutton, Andrew G. Barto, 2018-11-13 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence,

is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

The Complete Works of William Shakespeare (abridged) [revised] [again] Adam Long, 2023-10-15 Originally performed by its creators, this 1987 Edinburgh Fringe hit remains the second longest-running West End comedy in history and has been translated into over thirty languages. The Complete Works of William Shakespeare (abridged) is not so much a play as it is a vaudeville show in which three charismatic, wildly ambitious actors attempt to present all thirty-seven of Shakespeare's plays in a single performance. They have a rudimentary concept of the stories and

have imperfectly memorized a smattering of famous lines. Backstage there's a meager assortment of costumes and props. Thus armed, the three brazenly launch into their task with an earnest focus and breakneck enthusiasm.
