Digital Healing Marc Ringel,2018-06-14 Medical practice and research are inconceivable today without electronic computing and communication tools. Digital machines do many tasks orders-of-magnitude better, faster and more accurately than humans. Still, there are functions critical to the healthcare endeavor that people do much better than machines, things like: understanding and using natural language; perceiving what is unexpressed; taking into account values, culture, ethics, and human relationships; touching and healing. For the foreseeable future, the smartest computers will be no match for human beings when it comes to performing these most anthropic functions. American healthcare is at a critical juncture. Providers and patients are increasingly frustrated by degradation of the human relationships that lie at the core of the medical practice. Technologies, such as the computerized medical record, get much of the blame for intrusion into the patient-provider relationship. However, it is not technology itself that is to blame. The fault lies with how systems are conceived, designed, and deployed. This book analyzes how to organize the work of healthcare in a way that uses machines to do what they do best, thereby freeing humans to do what we do best. Smart use of electronic technology is crucial to the success of any bid to fulfill the Institute for Healthcare Improvement's triple aim

to make healthcare more effective, efficient, and humane.

Within the Frame David duChemin,2009-05-01 Within the Frame is a book about finding and expressing your photographic vision, specifically where people, places, and cultures are concerned. A personal book full of real-world wisdom and incredible images, author David duChemin (of pixelatedimage.com) shows you both the how and the why

of finding, chasing, and expressing your vision with a camera to your eye. Vision leads to passion, and passion is a cornerstone of great photography. With it, photographs draw the eye in and create an emotional experience. Without it, a photograph is often not worth—and can't capture—a viewer's attention. Both instructional and inspirational, *Within the Frame* helps you on your photographic journey to make better images of the places and people you love, whether they are around the world or in your own backyard. duChemin covers how to tell stories, and the technology and tools we have at our disposal in order to tell those narratives. Most importantly, he stresses the crucial theme of vision when it comes to photographing people, places, and cultures—and he helps you cultivate and find your own vision, and then fit it within the frame.

Photographically Speaking David

duChemin, 2011-10-11 When looking at a photograph, too often a conversation starts—and, unfortunately, ends—with a statement such as, “I like it.” The logical next question, “Why?”, often goes unasked and unanswered. As photographers, we frequently have difficulty speaking about images because, frankly, we don't know how to think about them. And if we don't know how to think about a photograph and its “visual language”—how an image is constructed, how it works, and why it works—then, when we're behind the camera, are we really making images that best communicate our vision, our original intent? Vision—crucial as it is—is not the ultimate goal of photography; expression is the goal. And to best express ourselves, it is necessary to learn and use the grammar and vocabulary of the visual language. *Photographically Speaking* is about learning photography's visual language to better speak to why and how a photograph succeeds, and in turn to consciously use that visual language in the

creation of our own photographs, making us stronger photographers who are able to fully express and communicate our vision. By breaking up the visual language into two main components—"elements" make up its vocabulary, and "decisions" are its grammar—David duChemin transforms what has traditionally been esoteric and difficult subject matter into an accessible and practical discussion that photographers can immediately use to improve their craft. Elements are the "words" of the image, what we place within the frame—lines, curves, light, color, contrast. Decisions are the choices we make in assembling those elements to best express and communicate our vision—the use of framing, perspective, point of view, balance, focus, exposure. All content within the frame has meaning, and duChemin establishes that photographers must consciously and deliberately choose the elements that go within their frame and make the decisions about how that frame is constructed and presented. In the second half of the book, duChemin applies this methodology to his own craft, as he explores the visual language in 20 of his own images, discussing how the intentional choices of elements and decisions that went into their creation contribute to their success.

Degunking Linux Roderick W. Smith, 2005 Linux has grown in popularity and is increasingly being adopted by home users and others who laud this nearly un-crashable, free operating system. But setting up a Linux OS can be tricky and time consuming. And managing a Linux system can be even more difficult if you don't have the right knowledge. *Degunking Linux* expertly shows readers how to save time (and money) by performing a number of important degunking tasks. With *Degunking Linux*'s easy 12-step program, users will learn what Linux gunk is, how to keep their Linux desktop clean and organized, how to better

manage personal and system-related files, how to make applications run their best, how to get gunky and incompatible drivers and hardware to run smoothly, how to protect their precious data from dangerous viruses and hackers, how to clean up and improve Linux's security features, and much more. Linux users will learn the causes of sluggish performance and how to apply smart solutions to improve overall system performance.

Collier's Guide to Night Photography in the Great Outdoors - 2nd Edition Grant Collier, 2020-08-25 The night sky may be the most awe-inspiring spectacle that any of us will ever see. It can, however, be difficult to capture in a

photograph, as it requires specialized techniques that are rarely used when shooting images during the day. Renowned photographer Grant Collier sheds light on how to capture these otherworldly images by sharing secrets he has learned over the past 14 years. He explains how to take photos of the Milky Way, northern lights, meteors, eclipses, lightning, and much more. Grant begins by reviewing equipment and supplies that are helpful when photographing at night. He then discusses many software programs, web sites, and mobile apps that will help you plan your shots. Finally, he offers extensive advice on how to capture and process images at night. He goes beyond the basics and teaches how to blend multiple exposures and create huge stitched images to capture incredibly detailed photos that you never before thought possible! The 2nd Edition has been completely updated and includes 50 new images. The sections on cameras and lenses have been rewritten and now includes tables to make it easier see all of the recommended gear. All of the web links have been updated, and include many new websites you can use to plan your photos. All information on post-processing has been updated for use with Photoshop and Lightroom CC 2020. This includes some powerful new techniques for blending multiple exposures taken at night. There is also new information on Photoshop plug-ins and other software that is useful for night photography.

The classic thriller about a hostile foreign power infiltrating American politics: “Brilliant . . . wild and exhilarating.” —The New Yorker A war hero and the recipient of the Congressional Medal of Honor, Sgt. Raymond Shaw is keeping a deadly secret—even from himself. During his time as a prisoner of war in North Korea, he was brainwashed by his Communist captors and transformed into a deadly weapon—a sleeper assassin, programmed to kill without question or mercy at his captors’ signal. Now he’s been returned to the United States with a covert mission: to kill a candidate running for US president . . .
