Scouting in Hong Kong, 1910-2010 Paul Kua,2011 Scouting in Hong Kong, 1910-2010 covers the what, how, when, who, why and so what of the Hong Kong Scout Movement from 1910 to 2010, using a large volume of primary sources. It deals with the development of the youth movement both as a subject of enquiry and as an analytical tool which may shed light upon the broader history of Hong Kong. The author combines professed aim of Scouting (citizenship), the key motives for supporting it (governance, war, secular education and religious conversion) and the most relevant differentiating identities (race, class, gender and

age) to analyze the experience of young people involved in Hong Kong Scouting throughout the years, both colonial and post-colonial. The book is richly illustrated with interesting and instructive images and relied heavily on a doctoral dissertation by the author, though they are also significantly different in both structure and content. It is a critical study aimed at both general readers and readers with more specific interests, and should enrich their understanding of the histories of Scouting, youth, citizenship education, the colonies, the British Empire, decolonization, China and Hong Kong. By reconstructing the evolution of Scouting from a niche movement for a handful of British boys before the First World War to a fully indigenized and co-educational mass movement in the post-colonial Hong Kong society, it fills a gap in the historical studies of youth movements around the world. By analyzing how the movement and the (re)construction of its particular brand of citizenship training reflected the development of the community, it adds to our understanding of the political, cultural and social history of Hong Kong, often influenced by that of China. By demonstrating the uniqueness of its evolution in the colonial context, it provides useful comparative insights into the history of imperialism and colonial youth movements. By exploring the choices made by local

Scouting since Hong Kong's retrocession of sovereignty to China, it compliments other studies on decolonization and post-colonial citizenship.

Modern Manhood and the Boy Scouts of America Benjamin René Jordan, 2016-03-07 In this illuminating look at gender and Scouting in the United States, Benjamin Rene Jordan examines how in its founding and early rise, the Boy Scouts of America (BSA) integrated traditional Victorian manhood with modern, corporate-industrial values and skills. While showing how the BSA Americanized the original British Scouting program, Jordan finds that the organization's community-based activities signaled a shift in men's social norms, away from rugged agricultural individualism or martial primitivism and toward productive employment in offices and factories, stressing scientific cooperation and a pragmatic approach to the responsibilities of citizenship. By examining the BSA's national reach and influence, Jordan demonstrates surprising ethnic diversity and religious inclusiveness in the organization's founding decades. For example, Scouting officials' preferred urban Catholic and Jewish working-class immigrants and modernizable African Americans and Native Americans over rural

whites and other traditional farmers, who were seen as too backward to lead an increasingly urban-industrial society. In looking at the revered organization's past, Jordan finds that Scouting helped to broaden mainstream American manhood by modernizing traditional Victorian values to better suit a changing nation.

Object-Oriented Programming with SIMOTION Michael Braun, Wolfgang Horn, 2017-06-27 In mechanical engineering the trend towards increasingly flexible solutions is leading to changes in control systems. The growth of mechatronic systems and modular functional units is placing high demands on software and its design. In the coming years, automation technology will experience the same transition that has already taken place in the PC world: a transition to more advanced and reproducible software design, simpler modification, and increasing modularity. This can only be achieved through object-oriented programming. This book is aimed at those who want to familiarize themselves with this development in automation technology. Whether mechanical engineers, technicians, or experienced automation engineers, it can help readers to understand and use object-oriented programming. From version 4.5, SIMOTION provides the option to use OOP in accordance with IEC 61131-3 ED3, the standard for programmable

logic controllers. The book supports this way of thinking and programming and offers examples of various object-oriented techniques and their mechanisms. The examples are designed as a step-by-step process that produces a finished, ready-to-use machine module. Contents: Developments in the field of control engineering - General principles of object-oriented programming - Function blocks, methods, classes, interfaces - Modular software concepts - Object-oriented design, reusable and easy-to-maintain software, organizational and legal aspects, software tests - I/O references, namespaces, general references - Classes in SIMOTION, instantiation of classes and function blocks, compatible and efficient software - Introduction to SIMOTION and SIMOTION SCOUT.

NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives Steven J. Dick, National Aeronautics and Space Administration, 2010-07-07 On 29 July 1958, President Dwight D. Eisenhower signed the National Aeronautics and Space Act, creating the National Aeronautics and Space Administration (NASA), which became operational on 1 October of that year. Over the next 50 years, NASA achieved a set of spectacular feats, ranging from advancing the well-established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight. In the midst of the geopolitical context of the Cold War, 12 Americans walked on the Moon, arriving in peace “for all mankind.” Humans saw their home planet from a new perspective,

with unforgettable Apollo images of Earthrise and the “Blue Marble,” as well as the “pale blue dot” from the edge of the solar system. A flotilla of spacecraft has studied Earth, while other spacecraft have probed the depths of the solar system and the universe beyond. In the 1980s, the evolution of aeronautics gave us the first winged human spacecraft, the Space Shuttle, and the International Space Station stands as a symbol of human cooperation in space as well as a possible way station to the stars. With the Apollo fire and two Space Shuttle accidents, NASA has also seen the depths of tragedy. In this volume, a wide array of scholars turn a critical eye toward NASA’s first 50 years, probing an institution widely seen as the premier agency for exploration in the world, carrying on a long tradition of exploration by the United States and the human species in general. Fifty years after its founding, NASA finds itself at a crossroads that historical perspectives can only help to illuminate.
