Inequality in America Stephen M. Caliendo, 2021-09-28 Why does inequality have such a hold on American society and public policy? And what can we, as citizens, do about it? Inequality in America takes an in-depth look at race, class, and gender-based inequality across a wide range of issues from housing and education to crime, employment, and health. Caliendo explores how individual attitudes can affect public opinion and lawmakers' policy solutions. He also illustrates how these policies result in systemic barriers to advancement that often then contribute to individual perceptions. This cycle of disadvantage and advantage can be difficult—though not impossible—to break. Representing and What Can I Do? feature boxes highlight key public figures who have worked to combat inequality and encourage students to do the same. The third edition has been thoroughly revised to include the most current data and cover recent issues and events such as Trump Administration policies, the #MeToo movement, and U.S. Supreme Court decisions affecting issues of racial representation and voting rights. Concise and accessible, Inequality in America paves the way for students to think critically about the attitudes, behaviors, and structures of inequality. New to the Third Edition New to the Third Edition Considers the heightened discussion of racial reckoning that has been occurring since the summer of 2020. Covers the disproportional effect to communities of color of the Covid-19 global pandemic and related recession Takes an early glimpse into Biden Administration priorities compared to Trump Administration policies on education, immigration, housing and urban development. Updates feature boxes, including a spotlight on U.S. Representative Alexandria Ocasio-Cortez and Bryan Stevenson of the Equal Justice Initiative. Discusses the January 6, 2021 riot at the U.S. Capitol, the #MeToo and #TimesUp Movements, and much more.

Pharmaceutical Supply Chains – Medicines Shortages Ana Paula Barbosa-Povoa, Helena Jenzer, João Luís de Miranda, 2019-06-01 This book provides an insight of relevant case studies and updated practices in “Pharmaceutical Supply Chains” (PharmSC) while addressing the most relevant topics within the COST Action “Medicines Shortages” (CA15105). The volume focuses on the most recent developments in the design, planning and scheduling of PharmSC, broadening from the suppliers' selection to the impact on patients and healthcare systems, addressing uncertainty and risk mitigation, and computational issues. It is directed at MSc/PhD

students and young researchers (Post-Docs) in Pharmaceutics/Pharmaceutical sciences, Engineering fields, Economics/Management, as well as pharmaceutical decision makers, managers, and practitioners, and advanced readers demanding a fresh approach to decision making for PharmSC. The contributed chapters are associated with the homonymous COST Training Schools (TS), and the book creates a better understanding of the Action “Medicines Shortages” challenges and opportunities.

2017 The State of Food Security and Nutrition in the World Food and Agriculture Organization of the United Nations, 2018-04-04 The international community is committed to ending hunger and all forms of malnutrition worldwide by 2030. While much progress has been made, conflict and human-induced and natural disasters are causing setbacks. This year’s *The State of Food Security and Nutrition in the World* warns that the long-term declining trend in undernourishment seems to have come to a halt and may have reversed, largely on account of the above-mentioned factors. Meanwhile, though progress continues to be made in reducing child malnutrition, rising overweight and obesity are a concern in most parts of the world. *The State of Food Security and Nutrition in the World* (formerly *The State of Food Insecurity in the World*). For the first time, this year is published by UNICEF and WHO now joining FAO, IFAD and WFP. Agenda for Sustainable Development and the UN Decade of Action on Nutrition. The assessment of both the traditional measure of the prevalence of undernourishment and the new indicator, the prevalence of severe food insecurity, based on the Food Insecurity Experience Scale. The report further looks at various forms of malnutrition, including trends and situations for child stunting, wasting and overweight and for adult obesity, breastfeeding and anemia in women. The thematic part of the world is affecting food security and nutrition. It also explores how, by improving food security and nutrition and by making rural livelihoods more resilient, it is possible to help prevent conflicts and sustain peace.

Agricultural Markets Instability Alberto Garrido, Bernhard Brümmer, Robert M'Barek, Miranda P. M. Meuwissen, Cristian Morales-Opazo, 2016-01-08 Since the financial and food price crises of 2007, market instability has been a topic of major concern to agricultural economists and policy professionals. This volume provides an overview of the key issues surrounding food prices volatility, focusing primarily on drivers, long-term implications of volatility and its impacts on food chains and consumers. The book explores which factors and drivers are volatility-increasing and which others are price level-increasing, and whether these two distinctive effects can be identified and measured. It considers the extent to which increasing instability affects agents in the value chain, as well as the actual impacts on the most vulnerable households in the EU and in selected developing countries. It also analyses which policies are more effective to avert and mitigate the effects of instability. Developed from the work of the European-based ULYSSES project, the book synthesises the most recent literature on the topic and presents the views of practitioners, businesses, NGOs and farmers' organizations. It draws policy responses and recommendations for policy makers at both European and on international levels.

The Five Horsemen of the Modern World Daniel Callahan, 2016-05-10 In recent decades, we have seen five perilous and interlocking trends dominate global discourse: irreversible climate change, extreme food and water shortages, rising chronic illnesses, and rampant obesity. Why can't we make any progress in counteracting these problems despite vast expenditures of intellectual, institutional, and social capital? What makes these global emergencies the wicked problems that resist our best efforts and only grow more daunting? Daniel Callahan, noted author and the nation's preeminent scholar in bioethics, examines these global problems and shines a light on the institutions, practices, and actors that block major change. We see partisan political and ideological forces, old-fashioned hucksters, and trumped-up scientific disagreements but also the problem of modern progress itself. Obesity, anthropogenic climate change, degenerative diseases, ecological degradation, and global famine are often the unintended consequences of unchecked industrial growth, insatiable eating habits, and technologically extended life spans. Only through well-crafted political, regulatory, industrial, and cultural counterstrategies can we change enough minds to check these threats. With big thinking on issues that are usually evaluated separately, this book is sure to scramble partisan divides and provoke unusual, heated debate.

How to Obtain a Phd (Penalty for Hardworking Dummies) in the United States: Inside Out Pearson Nurse, 2011-04-01 In the event of effacing the American Dream that has motivated both American born and immigrants for more than two hundred years, the author offers answers to mind-boggling questions why this is happening. The policy of unhealthy diet, irresponsible debts, and overmedicating Americans, promoted by the government, is the triple betrayal that devalues the famous traditional American belief in hard work leading to success. The author warns that America is replacing the values of high work ethic and free competition with crony capitalism, that favors chosen elite companies allowing them to socialize their loss and privatize their gain. Because of her multi-cultural background, Tamara Hammond has an original perspective of the United States and sees America from both the inside and the outside. Through the prism of these opposite views the author offers the unique angle of her perception and alerts the reader about some hurtful policies that are ruining the greatest country in the world. The insiders-outsiders outlooks are suggested in light of key events from recent American history that led to the current critical situation in the U.S.A. The author presents her ideas, observations, and analysis based on her thorough research and personal experience.

Environmental Advertising in China and the USA Xinghua Li, 2016-05-05 Since the late 1980s, green consumerism has been hailed in the West as an efficient solution to environmental problems. However, Chinese consumers have been slow to warm up to eco-friendly products. Consumers prefer SUVs to hybrid cars, health supplements and snake oil medicines to organic foods and eco-fashion is still secluded in high-end designer studios. These choices contradict the findings of many sustainable lifestyle surveys that claim to register a rising desire for green products among the Chinese. This book examines the psycho-cultural differences that disrupt the translation of eco-friendly appeals to China by analyzing environmental advertising. It explores the different notions of green, the structures of desire that underlies the advertisements, and how they are shaped by ideological, cultural, and historical differences. Rather than arguing the superiority of the American or Chinese version of green consumerism, the book interrogates the role of advertising in the global spread of Western ideologies and explores the possibilities for consumers to resist transnational corporate hegemony in the green movement. This book fills an important gap in the critical scholarship on green marketing and should be of interest to students and scholars of environment studies, green advertising and marketing, environmental communication and media studies, China studies and environmental sociology, ethics and cultural studies.

Environmental Technologies, Intellectual Property and Climate Change Abbe E. L. Brown, 2013-01-01 Many disciplines are relevant to combating climate change. This challenging book draws together legal, regulatory, geographic, industrial and professional perspectives and explores the role of technologies in addressing climate change through mitigation, adaptation and information gathering. It explores some key issues. Is intellectual property part of the solution, an obstacle to change or peripheral? Are there more important questions? Do they receive the attention they deserve? And from whom? This innovative book will play an important role in stimulating holistic discussion and action on an issue of key importance to society. *Environmental Technologies, Intellectual Property and Climate Change* will appeal strongly to scholars researching IP and climate change, as well as to a range of professionals including venture capitalists, practising lawyers working in IP, environmental and corporate finance law, activists within both climate change and human rights, and policymakers.

Food Sovereignty in International Context Amy Trauger, 2015-02-11 Food sovereignty is an emerging discourse of empowerment and autonomy in the food system with the development of associated practices in rural and some urban spaces. While literature on food sovereignty has proliferated since the first usage of the term in 1996 at the Rome Food Summit, most has been descriptive rather than explanatory in nature, and often confuses food sovereignty with other movements and objectives such as alternative food networks, food justice, or food self-sufficiency. This book is a collection of empirically rich and theoretically engaged papers across a broad geographical spectrum reflecting on what constitutes the politics and practices of food sovereignty. They contribute to a theoretical gap in the food sovereignty literature as well as a relative shortage of empirical work on food sovereignty in the global North, much previous work having focussed on Latin America. Specific case studies are included from Canada, Norway, Switzerland, southern Europe, UK and USA, as well as Africa, India and Ecuador. The book presents new research on the emergence of food sovereignties. It offers a wide variety of empirical examples and a theoretically engaged framework for explaining the aims of actors and organizations working toward autonomy and democracy in the food system.

Animal Oppression and Human Violence David Nibert, 2013-04-30 By comparing practices of animal exploitation for food and resources in different societies over time, David A. Nibert finds in the domestication of animals, which he renames domesecration, a perversion of human ethics, the development of large-scale acts of violence, disastrous patterns of destruction, and epidemics of infectious disease.

The Economics and Politics of China's Energy Security Transition Hongtu Zhao, 2018-09-05 The Economics and Politics of China's Energy Security Transition clarifies China's energy and foreign policies through a comprehensive examination of energy sources, providing an insider's unique perspective for assessing China's energy policies. China's historic decline in coal consumption since 2013-2014 and a plateauing of its carbon dioxide emissions have given China an unprecedented opportunity to decarbonize while growing its economy. In response to global questions about China's institutional, administrative, and political challenges and risks, this book provides the answers that everyone is asking. Provides a rare assessment of China's energy policies and reveals insights into the Chinese government Devotes attention to issues of global energy governance and energy sanctions Includes data and reference content suitable for researchers in economics, sustainability, energy policy, geopolitics and political science

Food and Poverty Leslie Hossfeld, E. Brooke Kelly, Julia Waity, 2021-04-30 Food insecurity rates, which skyrocketed with the Great Recession, have yet to fall to pre-recession levels. Food pantries are stretched thin, and states are imposing new restrictions on programs like SNAP that are preventing people from getting crucial government assistance. At the same time, we see an increase in obesity that results from lack of access to healthy foods. The poor face a daily choice between paying bills and paying for food.

Global Land Grabs Marc Edelman, Carlos Oya, Saturnino M. Borrás Jr., 2016-03-22 Since the 2008 world food crisis a surge of land grabbing swept Africa, Asia and Latin America and even some regions of Europe and North America. Investors have uprooted rural communities for massive agricultural, biofuels, mining, industrial and urbanisation projects. 'Water grabbing' and 'green grabbing' have further exacerbated social tensions. Early

analyses of land grabbing focused on foreign actors, the biofuels boom and Africa, and pointed to catastrophic consequences for the rural poor. Subsequently scholars carried out local case studies in diverse world regions. The contributors to this volume advance the discussion to a new stage, critically scrutinizing alarmist claims of the first wave of research, probing the historical antecedents of today's land grabbing, examining large-scale land acquisitions in light of international human rights and investment law, and considering anew longstanding questions in agrarian political economy about forms of dispossession and accumulation and grassroots resistance. Readers of this collection will learn about the impacts of land and water grabbing; the relevance of key theorists, including Marx, Polanyi and Harvey; the realities of China's involvement in Africa; how contemporary land grabbing differs from earlier plantation agriculture; and how social movements—and rural people in general—are responding to this new threat. This book was published as a special issue of Third World Quarterly.

America the Possible James Gustave Speth, 2012-09-25 In this third volume of his award-winning American Crisis series, James Gustave Speth makes his boldest and most ambitious contribution yet. He looks unsparingly at the sea of troubles in which the United States now finds itself, charts a course through the discouragement and despair commonly felt today, and envisions what he calls America the Possible, an attractive and plausible future that we can still realize. The book identifies a dozen features of the American political economy--the country's basic operating system--where transformative change is essential. It spells out the specific changes that are needed to move toward a new political economy--one in which the true priority is to sustain people and planet. Supported by a compelling theory of change that explains how system change can come to America, the book also presents a vision of political, social, and economic life in a renewed America. Speth envisions a future that will be well worth fighting for. In short, this is a book about the American future and the strong possibility that we yet have it in ourselves to use our freedom and our democracy in powerful ways to create something fine, a reborn America, for our children and grandchildren.

The End of Development Andrew Brooks, 2017-05-15 Why did some countries grow rich while others remained poor? Human history unfolded differently across the globe. The world is separated in to places of poverty and prosperity. Tracing the long arc of human history from hunter gatherer societies to the early twenty first century in an argument grounded in a deep understanding of geography, Andrew Brooks rejects popular explanations for the divergence of nations. This accessible and illuminating volume shows how the wealth of 'the West' and poverty of 'the rest' stem not from environmental factors or some unique European cultural, social or technological qualities, but from the expansion of colonialism and the rise of America. Brooks puts the case that international inequality was moulded by capitalist development over the last 500 years. After the Second World War, international aid projects failed to close the gap between 'developed' and 'developing' nations and millions remain impoverished. Rather than address the root causes of inequality, overseas development assistance exacerbate the problems of an uneven world by imposing crippling debts and destructive neoliberal policies on poor countries. But this flawed form of development is now coming to an end, as the emerging economies of Asia and Africa begin to assert themselves on the world stage. The End of Development provides a compelling account of how human history unfolded differently in varied regions of the world. Brooks argues that we must now seize the opportunity afforded by today's changing economic geography to transform attitudes towards inequality and to develop radical new approaches to addressing global poverty, as the alternative is to accept that impoverishment is somehow part of the natural order of things.
