FOREX Perfection In Manual, Automated And Predictive

Trading Mostafa Afshari,2018-08-31 From the very beginning and during writing this book one question was always in my mind: how much this book will benefit the reader? Finally I organized the book in three parts (Manual, Automated and Predictive Trading) to make sure at least one method solves the problem of Forex trading for the reader. In Manual Trading I have explained the best manual trading strategies and the most probable entry and exit signals. Automated Trading is the next part in which you will learn to develop your own trading ideas and strategies using a super easy, smart, advanced, free and all in one software in no time and make your trading 100% automated. Forex income on autopilot is not a dream anymore. In Predictive Trading, as it appears from the topic, you will learn top methods of next day price prediction. Just imagine how much difference will it make if you know prices of tomorrow in advance! This book is aimed to all retail traders (beginner or experienced), institutional traders, automated and algorithmic trading developers, Forex and financial markets researchers and all people who want to learn about some new possibilities in Forex trading.

Computational Intelligence in Data Mining – Volume 1 Lakhmi

C. Jain,Himansu Sekhar Behera,Jyotsna Kumar Mandal,Durga Prasad Mohapatra,2014-12-10 The contributed volume aims to explicate and address the difficulties and challenges for the seamless integration of two core disciplines of computer science, i.e., computational intelligence and data mining. Data Mining aims at the automatic discovery of underlying non-trivial knowledge from datasets by applying intelligent analysis techniques. The interest in this research area has experienced a considerable growth in the last years due to two key factors: (a) knowledge hidden in organizations' databases can be exploited to improve strategic and managerial decision-making; (b) the large volume of data managed by organizations makes it impossible to carry out a manual analysis. The book addresses different methods and techniques of integration for enhancing the overall goal of data mining. The book helps to disseminate the knowledge about some innovative, active research directions in the field of data mining, machine and computational intelligence, along with some current issues and applications of related topics.

Predicting Forex and Stock Market with Fractal Pattern Young

Ho Seo,2020-04-09 About this book This book provides you the powerful and brand new knowledge on predicting financial market that we have discovered in several years of our own research and development work. This book will help you to turn your intuition into the scientific prediction method. In the course of recognizing the price patterns in the chart of Forex and Stock market, you should be realized that it was your intuition working at the background for you. The geometric prediction devised in this book will show you the scientific way to predict the financial market using your intuition. Many of us made a mistake of viewing the financial market with

deterministic cycle. Even though we knew that market would not show us such a simple prediction pattern, we never stop using the concept of deterministic cycle to predict the financial market, for example, using Fourier transform, and other similar techniques.

Why is that so? The reason is simple. It is because no one presented an effective way of predicting stochastic cycle.

Stochastic cycle is the true face of the financial market because many variables in the market are suppressing the predictable cycle with fixed time interval. So how we predict the stochastic cycle present in the financial market? The key to answer is the Fractal Pattern and Fractal Wave. The geometric prediction on Fractal Wave solves the puzzles of the stochastic cycle modelling problem together. In another words, your intuition, more precisely your capability to recognize geometric shape, is more powerful than any other technical indicators available in the market. Hence, the geometric prediction, which comes from your intuition, would maximize your ability to trade in the financial market. In this book, Geometric prediction is described as the combined ability to recognize the geometric regularity and statistical regularity from the chart. We provide the examples of geometric regularity and statistical regularity. In addition, we will show you how these

regularities are related to your intuition. The chart patterns covered in this book include support, resistance, Fibonacci Price pattern, Harmonic Pattern, Falling Wedge pattern, Rising Wedge pattern, and Gann Angles with probability. We use these chart patterns to detect geometric regularity. Then, we use the turning point probability as the mean of detecting statistical regularity. In our trading, we combine both to improve the trading performance.

Forex Secret Trading Model Rich Finegan,2014-07-05 Do you know why flower stores buy roses near valentine's day? Yes, the market trend are roses and also good selling price in that period. Trend and price are the key factors in business and do not expect flower stores or any stores use technical analysis tools such as MACD, RSI, Stochastic, DMI, etc. to buy and sell products to customers, but why are we using technical analysis tools to buy or sell currency product in forex market? Market trend and price are the main tools in any business concept including forex trading. Technical analysis tools such as RSI, MACD, DMI, Stochastic, etc. are important but they are not the main tools, we are using them as second confirmation in forex trading. This book will present the combination of trend line, price and technical analysis tool which create a powerful trading model to catch more opportunities and

avoid unnecessary disaster in forex market. You will see the forex market differently once you know the concept and understanding the trading model.

Neural Information Processing Biao Luo, Long Cheng, Zheng-Guang Wu, Hongyi Li, Chaojie Li, 2023-11-13 The six-volume set LNCS 14447 until 14452 constitutes the refereed proceedings of the 30th International Conference on Neural Information Processing, ICONIP 2023, held in Changsha, China, in November 2023. The 652 papers presented in the proceedings set were carefully reviewed and selected from 1274 submissions. They focus on theory and algorithms, cognitive neurosciences; human centred computing; applications in neuroscience, neural networks, deep learning, and related fields.

New Trends in the Applications of Differential Equations in Sciences Angela Slavova, 2023-03-17 This book convenes peer-reviewed, selected papers presented at the Ninth International Conference New Trends in the Applications of Differential Equations in Sciences (NTADES) held in Sozopol, Bulgaria, June 17–20, 2022. The works are devoted to many applications of differential equations in different fields of science. A number of phenomena in nature (physics, chemistry, biology) and in society

(economics) result in problems leading to the study of linear and nonlinear differential equations, stochastic equations, statistics, analysis, numerical analysis, optimization, and more. The main topics are presented in the five parts of the book - applications in mathematical physics, mathematical biology, financial mathematics, neuroscience, and fractional analysis. In this volume, the reader will find a wide range of problems concerning recent achievements in both theoretical and applied mathematics. The main goal is to promote the exchange of new ideas and research between scientists, who develop and study differential equations, and researchers, who apply them for solving real-life problems. The book promotes basic research in mathematics leading to new methods and techniques useful for applications of differential equations. The NTADES 2022 conference was organized in cooperation with the Society of Industrial and Applied Mathematics (SIAM), the major international organization for Industrial and Applied Mathematics and for the promotion of interdisciplinary collaboration between applied mathematics and science, engineering, finance, and neuroscience.

Time-Series Prediction and Applications Amit Konar, Diptendu Bhattacharya, 2017-03-25 This book presents machine learning and

type-2 fuzzy sets for the prediction of time-series with a particular focus on business forecasting applications. It also proposes new uncertainty management techniques in an economic time-series using type-2 fuzzy sets for prediction of the time-series at a given time point from its preceding value in fluctuating business environments. It employs machine learning to determine repetitively occurring similar structural patterns in the time-series and uses stochastic automaton to predict the most probabilistic structure at a given partition of the time-series. Such predictions help in determining probabilistic moves in a stock index time-series. Primarily written for graduate students and researchers in computer science, the book is equally useful for researchers/professionals in business intelligence and stock index prediction. A background of undergraduate level mathematics is presumed, although not mandatory, for most of the sections. Exercises with tips are provided at the end of each chapter to the readers' ability and understanding of the topics covered.

Forex Trading with the Set it and Forget it Method J.

Thune, 2017-09-19 New futures traders also spend waaaay too much time on looking for the magical combination of indicators, settings and colors they think will show them something that is

going to help them make more money. There are no shortcuts or bells that go ding to tell you to enter the right position so stop looking right now and if you are using something like that and you're losing money perhaps that is why. All you need to see is right in front of you on the price chart which is price and time. Those are the only things that professionals care about and nothing else. You can certainly use your chart like a crystal ball to tell you where price will go with a high degree of certainty and Forex Trading with the Set it and Forget it Method tells you how. Forex Trading with the Set it and Forget it Method describes a method of trading that is used by all professionals in the financial market who are money makers. It is really nothing special and is the way the markets have worked since the beginning of time when there were markets and trading. Doesn't it make complete sense to you to learn a method of trading that the actual price of the market you want to work in is based on? To me it's a no brainer however most brand new traders make it very hard on themselves and their accounts in the beginning by learning all the wrong information from day one. When you are done reading Forex Trading with the Set it and Forget it Method you will have an excellent basic explanation of what and what not to do before you even study

anything or do any kind of formal education. The information in Forex Trading with the Set it and Forget it Method will put you on the fast track to becoming a successful self-directed financial market investor and trader with very little money invested. It will take you awhile to get your head around this set it and forget it mindset however once you do and you have learned the proper money management and other skills you need to be a successful consistently profitable trader you will never want to do it any other way trust me, you can take that to the bank!

Advances in Engineering Research and Application Kai-Uwe Sattler,Duy Cuong Nguyen,Ngoc Pi Vu,Banh Tien Long,Horst Puta,2019-11-30 This proceedings volume gathers the outcomes of the International Conference on Engineering Research and Applications (ICERA 2019), which was held at Thai Nguyen University of Technology, Vietnam, on December 1–2, 2019 and provided an international forum for disseminating the latest theories and practices in engineering research and applications. The conference focused on original research work in a broad range of areas, including Mechanical Engineering, Materials and Mechanics of Materials, Mechatronics and Micromechatronics, Automotive Engineering, Electrical and Electronics Engineering, and

Information and Communication Technology. By sharing the latest advances in these fields, the book will help academics and professionals alike to revisit their thinking on sustainable development.

How to Trade Forex with Zero Fear Christo Ricardo, It is huge step when you make the decision to become a Forex trader. Most brand new Forex traders are getting into this business because they think they can make quick money and become rich beyond their dreams. While that may be true, it is not as easy as one thinks and certainly will not happen as soon as one thinks. There are only two groups of people who are doing business in the markets, the professionals and the retail investors and traders, which do you want to be? By buying this book you are taking the first step needed to end up in the group that achieves consistent low risk profits on a daily basis, the professionals and the smart money. If you are not ready to take that step yet then you may be a part of the group called the sheeple of the herd that provides those profits. While that may seem like a harsh statement, I think it's important to point out the a few of the harshest realities of how the markets work right up front, so you know what's at stake when your hard-earned money is at risk in the live market. Now with the

advent of YouTube anyone with a video camera can record a video, plop it up on the internet and brand new unknowledgeable traders who are looking for information and seeing this and going “oh this must be right”. Beware of this type of marketing as it can and will get you and your account into a lot of trouble very quickly. It is not about how much you know in this business but about the quality of what you know. Instead of learning it the simple way and keeping things very simple brand new traders tend to over complicate their learning curve, don’t be that trader. You can use this book and the references, suggestions and tips in it to go further into your educational studies of the markets and there dynamics. Knowing market dynamics is going to be critical for you to have the winning edge you will need to be a successful market participant. By studying what this book suggests you will not become one of the 97% of the sheeple of the herd.

Second International Conference on Sustainable Technologies for Computational Intelligence Ashish Kumar Luhach, Ramesh Chandra Poonia, Xiao-Zhi Gao, Dharm Singh Jat, 2021-10-18 This book gathers high-quality papers presented at the Second International Conference on Sustainable Technologies for Computational Intelligence (ICTSCI 2021) held at Graphic Era

University, Dehradun, India, during May 22–23, 2021. It covers emerging topics in computational intelligence and effective strategies for its implementation in engineering applications.

Intelligent Data Engineering and Automated Learning – IDEAL 2015 Konrad Jackowski, Robert Burduk, Krzysztof Walkowiak, Michał Wozniak, Hujun Yin, 2015-10-13 This book constitutes the refereed proceedings of the 16th International Conference on Intelligent Data Engineering and Automated Learning, IDEAL 2015, held in Wrocław, Poland, in October 2015. The 64 revised full papers presented were carefully reviewed and selected from 127 submissions. These papers provided a valuable collection of recent research outcomes in data engineering and automated learning, from methodologies, frameworks, and techniques to applications. In addition to various topics such as evolutionary algorithms, neural networks, probabilistic modeling, swarm intelligent, multi-objective optimization, and practical applications in regression, classification, clustering, biological data processing, text processing, video analysis, IDEAL 2015 also featured a number of special sessions on several emerging topics such as computational intelligence for optimization of communication networks, discovering knowledge from data,

simulation-driven DES-like modeling and performance evaluation, and intelligent applications in real-world problems.

Engineering Applications of Neural Networks Lazaros S.

Iliadis,Harris Papadopoulos,Chrisina Jayne,2013-09-25 The two volumes set, CCIS 383 and 384, constitutes the refereed proceedings of the 14th International Conference on Engineering Applications of Neural Networks, EANN 2013, held on Halkidiki, Greece, in September 2013. The 91 revised full papers presented were carefully reviewed and selected from numerous submissions. The papers describe the applications of artificial neural networks and other soft computing approaches to various fields such as pattern recognition-predictors, soft computing applications, medical applications of AI, fuzzy inference, evolutionary algorithms, classification, learning and data mining, control techniques-aspects of AI evolution, image and video analysis, classification, pattern recognition, social media and community based governance, medical applications of AI-bioinformatics and learning.
