Through real-world scenarios, the book explores typical tasks technical document creators perform daily. The KBMT Project Kenneth Goodman,Sergei Nirenburg,1991-09-25 Machine translation of natural languages is one of the most complex and comprehensive applications of computational linguistics and artificial intelligence. This is especially true of knowledge-based machine translation (KBMT) systems, which require many knowledge resources and processing modules to carry out the necessary levels of analysis, representation and generation of meaning and form. The number of real-world problems, tasks, and solutions involved in developing any realistic-size knowledge-based machine translation system is enormous. It is thus difficult for researchers in the field to learn what a system really does. This book fills that need with a detailed case study of a KBMT system implemented at the Center for Machine Translation at Carnegie Mellon University. The research consists in part of the creation of a system for translation between English and Japanese. The corpora used in the project were manuals for installing and maintaining IBM personal computers (sponsorship by IBM, through its Tokyo Research Laboratory) Individual chapters describe the interlingua texts used in knowledge-based machine translation, the grammar formalism embodied in the system, the grammars and lexicons and their roles in the translation process, the process of source language analysis, an augmentation module that interactively and automatically resolves ambiguities remaining after source language analysis, and the generator, which produces target language sentences. Detailed appendices illustrate the process from analysis through generation. This book is intended for developers, researchers and advanced students in natural language processing and computational linguistics, including all those who have an interest in machine translation and machine-aided translation.

Frames in the Toxicity Controversy Arnold Tukker,2012-12-06 Preface When you write a book like this after ten years' working as an environmental specialist, you end up with something that reflects your career. Of course, when I started working at the Ministry of the Environment in the Netherlands, I could not foresee that I would now be at TNO, nor that I would have performed research into chlorine, PVC, waste, etc. , that would come to form the basis for this book. But step by step, with some coincidence and with the support of several people - who were probably unaware of the crucial role that, with hindsight, they played - I arrived at a position where I could start to consider this enterprise. At this point I shall try something dangerous - thanking a few of those people who gave that support. At the same time, it is obvious that I cannot mention them all. I hope that those whom I do not mention will forgive me. A first, crucial moment in this sequence of events came quite soon after I joined TNO in 1990. Just a few weeks later, all the senior staff in my section decided to leave in order to set up their own company. I decided to stay at TNO. As a consequence, I had to manage it on my own.
