Cotton Wool Kids Stella O'Malley, 2015-02-13 What has happened to Irish childhood? Parents are keeping their children indoors for fear of predators lurking around every corner and children are spending their days in front of screens or in supervised activities,

over-controlled and growing steadily fatter and more unhappy. But it doesn't have to be like this. Commercial interests ensure parents feel anxious and filled with fear simply to sell them more stuff, when in fact childhood has never been safer; the rates of child mortality, injury and sexual abuse are lower today than at any time since records began. Cotton Wool Kids exposes the truth behind the scary stories and gives parents the information and the confidence to free themselves from the treadmill of after-school activities and over-supervision that has become common today. The author provides parents with strategies to learn how to handle the relentless pressure from society and the media to provide a 'perfect' childhood and instead to raise their children with a more relaxed and joyful approach, more in touch with the outdoors and the community around them.

Rosenfeld, 2015-01-15 Digital Online Culture, Identity and Schooling in the Twenty-First Century provides a cultural, ideological critique of identity construction in the context of virtualization. Kimberly Rosenfeld explores the growing number of people who no longer reside in one physical reality but live, work, and play in multiple realities. Rosenfeld's critique of neo-liberal practices in the digital environment brings to light the on-going hegemonic and counter-hegemonic battles over control of education in the digital age. Rosenfeld draws conclusions for empowering the population through schooling, and how it should understand, respond to, and help individuals live out the information revolution.

Avatar Emergency Gregory L. Ulmer, 2012-08-15 A new experience of identity is emerging within the digital apparatus under the rubric of "avatar." This study develops "concept avatar" as an opportunity to invent a practice of citizenship native to the Internet that simulates the functionality of measure dramatized in the traditions of "descent" ("avatar") or "incarnation," including the original usage in the Bhagavad Gita, and the Western evolution of the virtue of prudence from the Ancient daimon, through genius and character, to the contemporary sinthome.

American Avatar Barry A. Sanders, 2011 Since September 11, 2001, the extensive literature on the United States's image abroad, by popular pundits and academics alike, leaves the reader with a false impression that foreigners' views of America are normally negative and impervious to change. In fact they are complex, emotional, frequently internally contradictory, and often change quickly. Barry A. Sanders corrects this misimpression with a rigorous and insightful textual analysis of the roots of people's views of the United States and what can be done to alter them. According to Sanders, the attitudes a person expresses about the United States consist of two separate components: the person's memory bank of images (informed by American geography, people, philosophy, history, and foreign policy) and a predisposition or bias that influences which images are called forth from memory. Opinion surveys, such as the Pew Global Attitude Survey, only record the spoken result of this twostep process in their tabulation of favorable or unfavorable comments. They necessarily fail to see the underlying complexity. Examining the biases or predispositions that guide people in selecting among the myriad stored images to express an opinion on a given day, Sanders analyzes both anti-American and pro-American biases but focuses on the former, explaining which criticisms should be heeded when crafting foreign policy and communicating national objectives to friends and foes alike.

Synthetic Worlds Andreas Hebbel-Seeger,Torsten Reiners,Dennis Schäffer,2013-08-13 Synthetic Worlds, Virtual Worlds, and Alternate Realities are all terms used to describe the phenomenon of computer-based, simulated environments in which users inhabit and interact via avatars. The best-known commercial applications are in the form of electronic gaming, and particularly in massively-multiplayer online role-playing games like World of Warcraft or Second Life. Less known, but possibly more important, is the rapid adoption of platforms in education and business, where Serious Games are being used for training purposes, and even Second Life is being used in many situations that formerly required travel. The editors of this book captures the state of research in the field intended to reflect the rapidly growing yet relatively young market in education and business. The general focus is set on the scientific community but integrates the practical applications for businesses, with papers on information systems, business models, and economics. In six parts, international authors – all experts in their field – discuss the current state-of-the-art of virtual worlds/alternate realities and how the field will develop over the next years. Chapters discuss the influences and impacts in and around virtual worlds. Part four is about education, with a focus on learning environments and experiences, pedagogical models, and the effects on the different roles in the educational sector. The book looks at business models and how companies can participate in virtual worlds while receiving a return on investment, and includes cases and scenarios of integration, from design, implementation to application.
