Heat Pipe Design and Technology Bahman Zohuri,2016-04-28 This book provides a practical study of modern heat pipe engineering, discussing how it can be optimized for use on a wider scale. An introduction to operational and design principles, this book offers a review of heat and mass transfer theory relevant to performance, leading into and exploration of the use of heat pipes, particularly in high-heat flux applications and in situations in which there is any combination of non-uniform heat loading, limited airflow over the heat generating components, and space or weight constraints. Key implementation challenges are tackled, including load-balancing, materials characteristics, operating temperature ranges, thermal resistance, and operating orientation. With its presentation of mathematical models to calculate heat transfer limitations and temperature gradient of both high- and low-temperature heat pipes, the book compares calculated results with the available experimental data. It also includes a series of computer programs developed by the author to support presented data, aid design, and predict performance.

Temporal Networks Petter Holme,Jari Saramäki,2013-05-23 The concept of temporal networks is an extension of complex networks as a modeling framework to include information on when interactions between nodes happen. Many studies of the last decade examine how the static network structure affect dynamic systems on the network. In this traditional approach the temporal aspects are pre-encoded in the dynamic system model. Temporal-network methods, on the other hand, lift the temporal information from the level of system dynamics to the mathematical representation of the contact network itself. This framework becomes particularly useful for cases where there is a lot of structure and heterogeneity both in the timings of interaction events and the network topology. The advantage compared to common static network approaches is the ability to design more accurate models in order to explain and predict large-scale dynamic phenomena (such as, e.g., epidemic outbreaks and other spreading phenomena). On the other hand, temporal network methods are mathematically and conceptually more challenging. This book is intended as a first introduction and state-of-the art overview of this rapidly emerging field.

Technological Advances in Improved and Alternative Sources of Lipids B. S. Kamel,2012-12-06 Lipids are very important both as components of human nutrition and in applications such as the chemical, cosmetics and food industries. At present the world oil supply depends on conventional sources and changes in the political and economical map of the world may mean consumer demand will surpass supplies. In developed nations consumer preferences due to nutrition and health factors have also created a need to produce new types of oil. Many nations lack the power to purchase fats ,and oil due to shortages in hard currency. These nations have a vast number of plants that can be developed and used in extracting oil for home use and for sale as cash crops. Also, a vast amount of waste from food processing, such as tomatoes, peaches, plums and grapes, can be utilized to extract valuable amounts of usable oil. Biotechnology, genetic engineering, enzyme tech nologies and new processes are all being utilized in lipids research to develop new and modified types of oil for different applications; such developments include the high oleic acid, sunflower and rapeseed oils. The development of cocoa butter substitute is another example. This highly practical book reviews the methods of improving oil charac teristics from existing sources, and the technology and economics of developing under-utilized sources. It is written for lipid chemists, chemical engineers, food technologists, cosmetologists and nutritionists. Graduate and undergraduate students will find value in the data. B.S.K.

Data Mining with Computational Intelligence Lipo Wang,Xiuju Fu,2005-12-08 Finding information hidden in data is as theoretically difficult as it is practically important. With the objective of discovering unknown patterns from data, the methodologies of data mining were derived from statistics, machine learning, and artificial intelligence, and are being used successfully in application areas such as bioinformatics, banking, retail, and many others. Wang and Fu present in detail the state of the art on how to utilize fuzzy neural networks, multilayer perceptron neural networks, radial basis function neural networks, genetic algorithms, and support vector machines in such applications. They focus on three main data mining tasks: data dimensionality reduction, classification, and rule extraction. The book is targeted at researchers in both academia and industry, while graduate students and developers of data mining systems will also profit from the detailed algorithmic descriptions.

Jews Who Rock Guy Oseary,2016-09-27 Foreword by Ben Stiller Afterword by Perry Farrell Jewish achievement in the sciences? Celebrated. Jews in literature? Lionized. But until now, there's been no record of the massive contributions of Jews in Rock n' Roll. Jews Who Rock features 100 top Jewish rockers, from Bob Dylan to Adam Horowitz, Courtney Love (yes, she's half Jewish) to John Zorn, with a concise page of essential data and a biography of each one. Includes the complete lyrics to The Chanukah Song by Adam Sandler

Rural Household Vulnerability and Insurance Against Commodity Risks Luc J. Christiaensen,Alexander Sarris,2007 This report has two objectives. It assesses the nature and the extent of vulnerability among rural households in Tanzania with a particular focus on smallholder cash crop growers though exploring all risks, including the decline in commodity prices. It further explores the potential role for market based insurance schemes such as commodity price and weather based insurance to mitigate household vulnerability. The empirical analysis is based on two rounds of specifically designed representative surveys of farm households in Kilimanjaro and Ruvuma, two cash crop growing regions in the United Republic of Tanzania in 2003 and 2004. The contrasting experiences of a richer (Kilimanjaro) and a poorer (Ruvuma) region substantially enriches the policy guidance emerging from the report. The report applies descriptive, econometric and contingent valuation techniques to achieve its objectives.

Evaluation Utilization John A. McLaughlin,Larry J. Weber,Robert W. Covert,Robert B. Ingle,1988-10-11 This volume of New Directions for Program Evaluation serves as a vehicle to report the observations and practices of evaluators from a number of perspectives regarding the utilization of evaluations. Topical interest groups from the American Evaluation Association are represented in these chapters as well as authors engaged in research on evaluation. The sourcebook represents a review of factors that promote or inhibit utilization and a compAndium of new directions in examining utilization. It provides a forum for the continued examination of the issues and practices associated with the utilization of program evaluationsincluding a review of old concepts as well as new and

emergent ideas about utilization. This is the 39th issue of New directions for Program Evaluation. For more infromation on the series, please see the Journals and Periodicals page.

Agents and Multi-Agent Systems: Technologies and Applications 2020 G. Jezic,J. Chen-Burger,M. Kusek,R. Sperka,Robert J. Howlett,Lakhmi C. Jain,2021-05-22 The book highlights new trends and challenges in research on agents and the new digital and knowledge economy. It includes papers on business process management, agent-based modeling and simulation and anthropic-oriented computing that were originally presented at the 14th International KES Conference on Agents and Multi-Agent Systems: Technologies and Applications (KES-AMSTA 2020), being held as a Virtual Conference in June 17–19, 2020. The respective papers cover topics such as software agents, multi-agent systems, agent modeling, mobile and cloud computing, big data analysis, business intelligence, artificial intelligence, social systems, computer embedded systems and nature inspired manufacturing, all of which contribute to the modern digital economy.

Asian Economic Integration Report 2018 Asian Development Bank,2018-10 This report documents Asia's progress in regional cooperation and integration. This publication documents Asia's progress in regional cooperation and integration. It covers the 48 regional members of the Asian Development Bank and analyzes regional as well as global economic linkages. The 2018 report's special chapter Toward Optimal Provision of Regional Public Goods in Asia and the Pacific examines how collective action among countries can help find solutions to growing transnational development challenges. The special chapter also discusses how to best provide regional public goods that transcend the so-called collective action problem which occurs when individual interests are too weak on their own to drive cooperation on common issues.

Private Religion at Amarna Anna Stevens,2006 In this study the author approaches the realm of 'private religion' in Egypt some 3,300 years ago. The two broad research questions that frame this study are: What was the structure of the private religious landscape at Amarna (Central Egypt, on the Nile), and what were the ideas that shaped this landscape? The starting point is a corpus of objects and structures from settlement remains at one site, Amarna, the location of Egypt's capital for a brief period (c.350 - 330 BCE) towards the end of the Eighteenth Dynasty. At the height of its occupation, Amarna was the administrative, political and religious centre of Egypt. (Estimates of the city 's population at this time range between 20,000 and 50,000 people.) This publication is divided into three parts.Part I places the study in context. The history of the Amarna period, the layout of the site and its excavation history are summarized. Part 2 explores the issue of how to define private religion and identify its material remnants: the inventory of the material evidence - objects, architectural emplacements and buildings. It is hoped that the dissemination of this material will assist others researching similar topics, making available unpublished evidence from most of the main phases of excavation at the site. Part 3 explores the design, manufacture and acquisition of the material components of religion, and considers the forms of the conduct in which they were used. Also examined are the transcendental forces involved: the royal family and Aten, and 'traditional ' deities and spirits, including private ancestors. Part 3 also considers the shape of the religious cityscape, and the questions of who was participating in religion, and what was done with the material when it was no longer in use. The study concludes with a discussion of the motivating factors that underlay religious conduct, and which open a small window onto the ideas that shaped the religious landscape more broadly.

Understanding the Process of Economic Change in Turkey Tamer Çetin,2010 The institutional endowment of a country determines government's regulatory choices, the public policies, incentives, and the direction of economic activities in the country and the level of the economic efficiency. The authors use this conceptual framework introduced by Levy and Spiller (1996) to examine how institutional endowment in Turkey influence economic and political structure. In this context, most elements of institutional endowments in Turkey are common to all sectors and reforms, (namely,

legislative and executive institutions, nature of the judicial system, bureaucratic structure). They also observe the political economy of the change in Turkey. For that reason, they observe similarities and differences in the contests among groups with divergent interests for the different policy changes and reforms processes. Thus, they introduce a crucial guide for scholars, researchers, and investors around the world about the political and economic structure in Turkey
