z/OS Distributed File Service zSeries File System Implementation z/OS V1R13 Paul Rogers, Robert Hering, IBM Redbooks, 2012-10-18 The z/OS® Distributed File Service zSeries® File System (zFS) is a z/OS UNIX® file system that can be used like the Hierarchical File System (HFS). zFS file systems contain files and directories, including Access Control Lists (ACLs), that can be accessed with the z/OS HFS application programming interfaces (APIs). zFS file systems can be mounted into the z/OS UNIX hierarchy along with other local or remote file system types (for example, HFS, TFS, AUTOMNT, NFS, and so on). zFS does not

replace HFS, but it is the z/OS UNIX strategic file system and IBM® recommends migrating HFS file systems to zFS. Beginning with z/OS V1R7, there are no restrictions for file system structures that should be kept as HFS instead of zFS. This IBM Redbooks® publication helps you to install, tailor, and configure new zFS file systems. This information can be used by system administrators who work with the zFS component of the IBM z/OS Distributed File Service base element. The book provides a broad description of the new architecture of the zFS file system for all releases up to zFS V1R13. You can use it as a reference when converting HFS file systems to zFS file systems. It will help you to create a solution for migrating to zFS file systems, and to understand the performance differences between HFS file systems and zFS file systems.

Circulating Nucleic Acids in Plasma Or Serum Philippe Anker, Maurice Stroun, 2000 Free DNA present in both healthy and diseased human plasma has been found to express specific point mutations that may serve as diagnostic signposts - perhaps to reliable, non-invasive tests for breast and lung cancer, haematopoietic malignancies, colorectal or pancreatic carcinoma, and other tumours. In another research area, foetal DNA has been detected in maternal serum which presents an early-horizon alternative in utero test for gender. A parallel discovery of rearranged immunoglobulin heavy-chain DNA in the plasma of patients with Hodgkin's disease or acute B cell leukaemia has also emerged. These fast-emerging indicators suggest that it is time to standardize research techniques and develop protocols that can take a measure of circulating DNA's usefulness as a diagnostic tool. This volume, taken from the proceedings of a conference in August 1999, discusses such issues.

Emerging Technologies for Heart Diseases Udi Nussinovitch, 2020-08-19 The increasing pace of

advances in cardiology throughout the last few decades has fundamentally altered the natural course of heart patients. In the last few years, available therapies have been revolutionized completely by new transcatheter therapeutic approaches, novel ventricular assist devices, and new drugs. Also, molecular biology and genetics have a rapidly growing impact on cardiovascular diseases, enabling the field of regenerative medicine to become increasingly closer to routine clinical implementation. Emerging Technologies for Heart Diseases was conceived to cover the recent extensive literature on current and novel therapeutic options for cardiac patients. The first volume is dedicated to heart failure and valvular disorders, and the second covers myocardial ischemia and arrhythmias. The clinical topic is addressed in several chapters divided according to the therapeutic approach (mechanical or electrical device-based, or cell and gene-based). Each of the 46 chapters focuses on clinically available solutions, new therapies currently under evaluation in clinical trials, promising preclinical technologies, and emerging concepts and innovations that have not yet been tested in a preclinical model. Also, the book discusses future challenges and opportunities for clinical implementation. Lessons learned from abandoned experimental practices are also covered, giving the readers the widest possible perspective of current therapeutic dilemmas. Overall, this textbook was designed for physicians who want to stay up-to-date with current therapies and those of the future, for biomedical companies, and for those who wish to broaden their knowledge of new cardiovascular therapeutic options. Provides a comprehensive review of the latest therapeutic developments for heart failure, valvular disorders, myocardial ischemia and arrhythmias, and their clinical implications Written by both specialists in the field and established researchers, it delivers a review of

emerging medical technologies and presents insight into their therapeutic promise Chapters are arranged according to disease pathogeneses and relevance and include coverage of the mechanical, electrophysiological, and biological approaches for the management of patients with myocardial ischemia and arrhythmias

Introduction to Space Physics Margaret G. Kivelson, Christopher T. Russell, 1995-04-28 All aspects of space plasmas in the Solar System are introduced and explored in this text for senior undergraduate and graduate students. *Introduction to Space Physics* provides a broad, yet selective, treatment of the complex interactions of the ionized gases of the solar terrestrial environment. The book includes extensive discussion of the Sun and solar wind, the magnetized and unmagnetized planets, and the fundamental processes of space plasmas including shocks, plasma waves, ULF waves, wave particle interactions, and auroral processes. The text devotes particular attention to space plasma observations and integrates these with phenomenological and theoretical interpretations. Highly coordinated chapters, written by experts in their fields, combine to provide a comprehensive introduction to space physics. Microbial Ecology of Biofilms Bruce E. Rittmann,1999 Biofilms are ubiquitous, yet until recently scientists and engineers involved in biofilm research or application had a severely limited insight into the structure and functioning of biofilms on a microbial level. However the past decade has seen an explosion of new techniques to elucidate the structure and functions of biofilms, e.g. molecular probes, microsensors, scanning electron microscopy, and a new generation of mathematical models. The 35 contributions selected for these proceedings after peer review reflect these developments with papers grouped into the following themes: nutrient removal systems; anaerobic systems; biofilm physical structure and aerobic water treatment; multidimensional modelling; detoxification of hazardous chemicals; and transport processes in and to the biofilm. The proceedings provide a unique panorama of the latest scientific tools, the emerging new concepts and the widespread applications that are making microbial ecology of biofilms such an exciting field. These genuinely state-of-the-art papers lay foundations for great progress in the next

century.
