**Gaming Cultures and Place in Asia-Pacific** Larissa Hjorth, Dean Chan, 2009-06-24 This collection explores the relationship between digital gaming and its cultural context by focusing on the burgeoning Asia-Pacific region. Encompassing key locations for global gaming production and consumption such as Japan, China, and South Korea, as well as increasingly significant sites including Australia and Singapore, the region provides a wealth of divergent examples of the role of gaming as a socio-cultural phenomenon. Drawing from micro ethnographic studies of specific games and gaming locales to macro political economy analyses of techno-nationalisms and trans-cultural flows, this collection provides an interdisciplinary model for thinking through the politics of gaming production, representation, and consumption in the region.

**No Free Lunch** William A. Dembski, 2006-11 Darwin's greatest accomplishment was to show how life might be explained as the result of natural selection. But does Darwin's theory mean that life was unintended? William A. Dembski argues that it does not. As the leading proponent of intelligent design, Dembski reveals a designer capable of originating the complexity and specificity found throughout the cosmos. Scientists and theologians alike will find this book of interest as it brings the question of creation firmly into the realm of scientific debate. The paperback is updated with a new Preface by the author.

**Instructional Design on a Shoestring** Brian Washburn,2024-01-16 Design Effective Training Programs Despite Limited Resources Instructional Design on a Shoestring offers talent development professionals a process for developing effective training programs, even with limited resources. Expert instructional designer Brian Washburn applies the ADDIE model of instructional design and the Build-Borrow-Buy approach to provide guidance, quick tips, and shortcuts for designing a range of training modalities, including in-person, virtual and asynchronous, and self-guided e-learning. With this book, you will learn to build the structure of the instructional design process, effective formal and informal learning experiences, and an ecosystem that supports the learning initiatives. This crash-course of a book also guides you on working with subject matter experts, supervisors, and early testers and drawing learning design ideas from unfamiliar places. You'll learn how and when to make decisions for using tools and technologies, hiring external help, and purchasing off-the-shelf training programs to speed up the work. Even if you don't have a ton of time or access to a lot of money, you can still produce an effective learning experience based on sound educational theory and adult learning principles. About the On a Shoestring Series The Association for Talent Development's On

a Shoestring series helps professionals successfully execute core topics in training and talent development when facing limitations of time, money, staff, and other resources. Using the Build-Borrow-Buy approach to problem solving, this series is designed for practitioners who work as a department of one, for new or “accidental” trainers, instructional designers, and learning managers who need fast, inexpensive access to practical strategies that work, and for those who work for small organizations or in industries that have limited training and development resources.

**Frontiers of Multimedia Research** Shih-Fu Chang, 2018-01-03 The field of multimedia is unique in offering a rich and dynamic forum for researchers from “traditional” fields to collaborate and develop new solutions and knowledge that transcend the boundaries of individual disciplines. Despite the prolific research activities and outcomes, however, few efforts have been made to develop books that serve as an introduction to the rich spectrum of topics covered by this broad field. A few books are available that either focus on specific subfields or basic background in multimedia. Tutorial-style materials covering the active topics being pursued by the leading researchers at frontiers of the field are currently lacking. In 2015, ACM SIGMM, the special interest group on multimedia, launched a new initiative to address this void by selecting and inviting 12 rising-star speakers from different subfields of multimedia research to deliver plenary tutorial-style talks at the ACM Multimedia conference for 2015. Each speaker discussed the challenges and state-of-the-art developments of their prospective research areas in a general manner to the broad community. The covered topics were comprehensive, including multimedia content understanding, multimodal human-human and human-computer interaction, multimedia social media, and multimedia system architecture and deployment. Following the very positive responses to these talks, the speakers were invited to expand the content covered in their talks into chapters that can be used as reference material for researchers, students, and practitioners. Each chapter discusses the problems, technical challenges, state-of-the-art approaches and performances, open issues, and promising direction for future work. Collectively, the chapters provide an excellent sampling of major topics addressed by the community as a whole. This book, capturing some of the outcomes of such efforts, is well positioned to fill the aforementioned needs in providing tutorial-style reference materials for frontier topics in multimedia. At the same time, the speed and sophistication required of data processing have grown. In addition to simple queries, complex algorithms like machine learning and graph analysis are becoming common. And in addition to batch processing, streaming analysis of real-time data is required to let organizations take timely action. Future computing platforms will need to not only scale out traditional workloads, but support these new applications too. This book, a revised version of the 2014 ACM Dissertation Award winning dissertation, proposes an architecture for cluster computing systems that can tackle emerging data processing workloads at scale. Whereas early cluster computing systems, like MapReduce, handled batch processing, our architecture also enables streaming and interactive queries, while keeping MapReduce's scalability and fault tolerance. And whereas most deployed systems only support simple one-pass computations (e.g., SQL queries), ours also extends to the multi-pass algorithms required for complex analytics like machine learning. Finally, unlike the specialized systems proposed for some of these workloads, our architecture allows these computations to be combined, enabling rich new applications that intermix, for example, streaming and batch processing. We achieve these results through a simple extension to MapReduce that adds primitives for data sharing, called Resilient Distributed Datasets (RDDs). We show that this is enough to capture a wide range of workloads. We implement RDDs in the open source Spark system, which we evaluate using synthetic and real workloads. Spark matches or exceeds the performance of specialized systems in many domains, while offering stronger fault

tolerance properties and allowing these workloads to be combined. Finally, we examine the generality of RDDs from both a theoretical modeling perspective and a systems perspective. This version of the dissertation makes corrections throughout the text and adds a new section on the evolution of Apache Spark in industry since 2014. In addition, editing, formatting, and links for the references have been added.

*The Neuroscience and Neuropsychology of Gambling* Luke Clarke, Anna E.

Goudriaan, 2021-11-29 Gambling disorder is a behavioural addiction that represents the clinical extreme of a spectrum of gambling-related harm. What insights can neuroscientific and neuropsychological methods provide to help understand this condition and improve existing programs for treatment and prevention? This volume describes recent research using an array of contemporary tools including structural and functional brain imaging, and neurocognitive assessment. These analyses consider brain activity and psychological functioning in people with gambling disorder under resting conditions, due to tasks of reward processing and inhibitory control, and as a function of important sources of individual differences including depression and impulsivity. This volume also synthesizes contemporary research using animal models to examine decision-making under uncertainty from a behavioural neuroscience perspective, as well as synthesizing evidence from pharmacological treatments for gambling disorders. These findings complement research to understand substance use disorders and other emerging forms of behavioural addiction. This volume contains contributions from many of the leading research groups in this exciting field. The chapters in this book were originally published as a special issue of *International Gambling Studies*.

*Nest of Gold* Cursino Correia, 2024-02-02 We often ponder how some individuals,

starting at the lowest rung of life's ladder, reach their retirement years with happiness, contentment, and a vibrant lifestyle, equipped with essentials that even those who prospered in their earlier years find themselves lacking. Is there a secret formula that leads to such fulfilment? How can one ensure that their twilight years are filled with hope, contentment, and a genuine sense of personal achievement, especially in a world where many are preoccupied with financial concerns and yearn for a past that is forever gone? Nest of Gold offers answers to these questions. From the outset, it guides the reader, who might otherwise face a disappointing retirement, by outlining steps and techniques to follow. These strategies provide a well-trodden path to a secure and fulfilling later life. While the book primarily addresses the future planning of those in the lower-middle class, its principles are universal. The key is in adapting the advice to one's individual earnings and wealth. The overarching goal is inclusive: to leave no one behind and to contribute to the eradication of poverty. Nest of Gold is more than a guide; it's a manifesto for a brighter, more secure future for everyone.

*Never Let a Serious Crisis Go to Waste* Philip Mirowski, 2014-04-15 At the onset of the Great Recession, as house prices sank and joblessness soared, many commentators concluded that the economic convictions behind the disaster would now be consigned to history. Yet in the harsh light of a new day, attacks against government intervention and the global drive for austerity are as strong as ever. *Never Let a Serious Crisis Go to Waste* is the definitive account of the wreckage of what passes for economic thought, and how neoliberal ideas were used to solve the very crisis they had created. Now updated with a new afterword, Philip Mirowski's sharp and witty work provides a roadmap for those looking to escape today's misguided economic dogma.
