Translation: The Basics Juliane House,2023-09-25 Translation: The Basics is an accessible and comprehensive introduction to the study of translation. This revised edition includes two new chapters on culturally embedded concepts and translation in global business. All references have been updated with additional references and new quotes added. Combining traditional text-based views with the context of translation in its widest sense, it presents an integrated approach to methodology in order to critically address influences such as power and gender, as well as cultural, ethical, political and ideological issues. This book answers such questions as: How can translations be approached? Do social issues and culture play a part in translations? How does a translation relate to the original work? What effect has globalization had on translation? What are the core concerns of professional translators? Key theoretical issues are explained with reference to a range of case studies, suggestions for further reading and a detailed glossary of terms, making this the essential guide for anyone studying translation and translation studies.

On Self-translation Simona Anselmi,2021-04-09T00:00:00+02:00 The book explores aspects of self-translation, an all but exceptional phenomenon which has been practised, albeit on the quiet, for nearly two thousand years and has recently grown exponentially due to the increasing internationalisation of English and the growing multilingualism of modern societies. Starting from the premise that self-translation is first and foremost a translational act, i.e. a form of rewriting subject to a number of constraints, the book utilises the most valuable methods and findings of translation studies to account for the variety of reasons underlying self-translation processes and the diversity of strategies used by self-translators. The cases studied, from Kundera to Ngugi, and addressing writers like Beckett, Huston, Tagore, Brink, Krog and many others, show that the translation methods employed by self-translators vary considerably depending on their teloi. Nonetheless, most self-translations display domesticating tendencies similar to those observed in allograph translations, which confirms the view that self-translators, just like normal translators, are never free from the linguistic and cultural constraints imposed by the recontextualising of their texts in a new language. Most interestingly, the study brings to light certain recurring features, e.g. a tendency of author-translators to revise their original during the self-translation process or after completing it, which make self-translators privileged authors who can revise their texts in the light of the insights gained while translating.

Cell-Free Translation Systems A.S. Spirin,2012-12-06 This is a unique book that describes the most recent achievements in the methodology of protein biosynthesis under cell-free conditions. Various versions of cell-free protein-synthesizing systems and their applications to production of individual proteins on a preparative scale are reviewed. The most recent, advanced methodologies, such as continuous-exchange and continuous-flow cell-free systems and novel effecting batch-format cell-free procedures, are considered. Special attention is drawn to the possibilities of structural (NMR; X-ray) analysis of various gene expression products with the use of a new generation of cell-free systems.

Translation as a Profession Daniel Gouadec,2007-06-06 Translation as a profession provides an in-depth analysis of the translating profession and the translation industry. The book starts with a presentation of the diversity of translations and an overview of the translation-localisation process. The second section describes the translation profession and the translators' markets. The third section considers the process of 'becoming' a translator, from the moment people find out whether they have the required qualities to the moment when they set up shop or find a job, with special emphasis on how to find and hold on to clients, avoiding basic mistakes. The fourth section concentrates on the vital professional issues of costs, rates, deadlines, time to market, productivity, ethics, standards, qualification, certification, and professional recognition. The fifth section is devoted to the developments that have provoked ongoing changes in the profession and industry, such as ICT, and the impact of industrialisation, internationalisation, and globalisation. The final section is devoted to the major issues involved in translator training. A glossary is provided, together with a list of Websites for further browsing.

Comparable Corpora and Computer-assisted Translation Estelle Maryline Delpech,2014-07-22 Computer-assisted translation (CAT) has always used translationmemories, which require the translator to have a corpus of previoustranslations that the CAT software can use to generate bilinguallexicons. This can be problematic when the translator does not havesuch a corpus, for instance, when the text belongs to an emergingfield. To solve this issue, CAT research has looked into theleveraging of comparable corpora, i.e. a set of texts, in two ormore languages, which deal with the same topic but are nottranslations of one another. This work had two primary objectives. The first is to assess theinput of lexicons extracted from comparable corpora in the contextof a specialized human translation task. The second objective is toidentify bilingual-lexicon-extraction methods which best match thetranslators' needs, determining the current limits of thesetechniques and suggesting improvements. The author focuses, inparticular, on the identification of fertile translations, themanagement of multiple morphological structures, and the ranking ofcandidate translations. The experiments are carried out on two language pairs(English-French and English-German) and on specializedtexts dealing with breast cancer. This research puts significantemphasis on applicability - methodological choices are guidedby the needs of the final users. This book is organized in twoparts: the first part presents the applicative and scientificcontext of the research, and the second part is given over toefforts to improve compositional translation. The research work presented in this book received the PhD Thesisaward 2014 from the French association for natural languageprocessing (ATALA).

New Theory of the Holy Qur'an Translation: A Textbook for Advanced University Students of Linguistics and Translation Ali Alhaj,2015-06 Translation strategies are the procedures employed by the translator to attempt a solution to the multifarious baffling problems with which translation is indubitably replete. Malone (1988, p.78) defines translation The steps, selected from a consciously known range of potential procedures, taken to solve a translation problem, which has been consciously detected and resulting in a consciously applied solution. While some strategies are helpful, others turn out to be of little avail. It follows, then, that the translator has to sort out the wheat from the chaff in pursuit of a good translation. Here, the translator may utilize particular strategies in accordance with the method anticipated in the course of translation, i.e. target- orientedness or source- orientedness., Faced with differences in the extralinguistic reality of the two cultures or ist lexical mapping, the translator tries to reconcile them by relying on the following procedures: borrowing, definition, literal translation, substitution, lexical creation, omission, and addition. Three comments that need to be made by the researcher in connection with this list: First, not all of the procedures achieve cultural transfer in the sense of filling the gap, but they all serve the purpose of achieving communicative equivalence in translation. For instance, substitution and omission certainly do not help to make members of the target culture aware of anything that their culture does not already possess, and lexical creation is no more enlightening than the use of the sources - language expression unless accompanied by some other procedure that will make the particular extra-linguistic feature part of their experiences. Second, combinations of procedures rather than single procedures are required for optimum transmission of cultural information (e.g., borrowing -and- definition, borrowing-and- substitution, lexical creation-and- definition,) Third, in planning his/her translation strategy, the translator does not make a one-time decision on how he/she will treat unmatched elements of culture; rather, even if the translator has established an overall order of preferences, he/she usually makes a new decision for each element and for ist each use in an act of communication, rather, even if he has established an overall order of preferences, he usually makes a new decision for each such element and for each use in an act of communication .(Cohen,1990,p.78)

The Routledge Handbook of Translation and Ethics Kaisa Koskinen,Nike K. Pokorn,2020-12-16 The Routledge Handbook of Translation and Ethics offers a comprehensive overview of issues surrounding ethics in translating and interpreting. The chapters chart the philosophical and theoretical underpinnings of ethical thinking in Translation Studies and analyze the ethical dilemmas of various translatorial actors, including translation trainers and researchers. Authored by leading scholars and new voices in the field, the 31 chapters present a wide coverage of emerging issues such as increasing technologization of translation, posthumanism, volunteering and activism, accessibility and linguistic human rights. Many chapters provide the first extensive overview of the topic or present new takes on established areas. The book is divided into four parts, with the first covering the most influential ethical theories. Part II takes the perspective of agents in different contexts and the ethical dilemmas they face, while Part III takes a critical look at central institutions structuring and controlling ethical behaviour. Finally, Part IV focuses on special issues and new challenges, and signals new directions for further study. This handbook is an indispensable resource for all students and researchers of translation and ethics within translation and interpreting studies, multilingualism and comparative literature.

Reading in Asian Languages Kenneth S. Goodman,Shaomei Wang,Mieko Iventosch,Yetta M. Goodman,2012-04-23 Reading in Asian Languages is rich with information about how literacy works in the non-alphabetic writing systems (Chinese, Japanese, Korean) used by hundreds of millions of people and refutes the common Western belief that such systems are hard to learn or to use. The contributors share a comprehensive view of reading as construction of meaning which they show is fully applicable to character-based reading. The book explains how and why non-alphabetic writing works well for its users; provides explanations for why it is no more difficult for children to learn than are alphabetic writing systems where they are used; and demonstrates in a number of ways that there is a single process of making sense of written language regardless of the orthography. Unique in its perspective and offering practical theory-based methodology for the teaching of literacy in Chinese, Japanese, and Korean to first and second language learners, it is a useful resource for teachers of increasingly popular courses in these languages in North America as well as for teachers and researchers in Asia. It will stimulate innovation in both research and instruction.
