Get the Picture Dan Richards,The Editors of Popular Photography,2016-10-18 This illustrated handbook from the experts at Popular Photography covers everything you need to know about your new digital camera. Today's technology has made DSLR/ILC cameras more powerful (and more reasonably priced) than ever. Getting the perfect shot has never been easier—if you know how to get the most out of your machine. *Get the Picture* walks you through all the functions, modes, buttons, and dials on the latest standard models, providing solid technical advice in handy tips paired with beautiful imagery that demonstrates each tactic. You'll find sections on: DSLR Fundamentals Your go-to guide for basic camera functionality, including exposure, (aperture, ISO, and shutter speed, focus), and white balance. Next-Level Settings Once you've mastered the essentials, take a tour through your camera's various shooting modes (aperture-priority, shutter-priority, portrait, macro, and more) and experiment with its on-camera flash, bracketing functions, and shooting RAW. Explore your lens's zoom, image stabilization, and other capabilities, too. Bonus Gear If you're looking to build a photography kit beyond your basic camera body, study up on accessory flash units, lenses, release triggers, and simple, inexpensive lighting modifiers.

Cellular Function and Metabolism Yoshio Yazaki,Seibu Mochizuki,2012-12-06 A variety of metabolic processes are known to be intimately involved in the maintenance of cellular structure and function. It has also become clear that metabolic events involved in the synthesis and hydrolysis of ATP as well as for the synthesis of proteins and phospholipids are essential for cellular health. The regulation of cell function is generally achieved through participation of a wide variety of hormones and different signal transduction mechanisms for the activation/deactivation of some specific metabolic processes. In this regard cyclic AMP and calcium seem to play a crucial role. Various hormones are also known to affect the genetic machinery of all the cell; however, the exact signals for genetic control of cellular function are not well defined. In particular, the sequence of events concerned with remodelling of different types of cells under various pathological situations is poorly understood. In this book we have therefore dealt with some of these issues from biochemical, molecular biological, physiological, and pharmacological viewpoints. Special emphasis has been laid on understanding heart function and metabolism in health and disease in general, and cardiac hypertrophy, heart failure, and ischemic heart disease in particular. It is hoped that this multidisciplinary information will be of value to basic scientists and clinical investigators.
