Learn while you sleep. Quickly, simply and effectively. Tony Gaschler, 2019-03-01 Everything that you want to or have to learn can be learned for the most part while you sleep, whether learning languages or any other kind of knowledge. Usually we allow ourselves eight hours' sleep a night. By the time you are celebrating your 60th birthday, you will have spent about 20 years in bed. Don't restrict your learning to the daytime - use the night for learning, too! Without damaging your health or your well-being, you can now use part of this time to deepen and strengthen your knowledge and skills considerably. There are no limits placed on your learning objectives, here are just a few examples: - learn foreign languages and vocabulary - improve your grammatical knowledge - prepare for exams - practise formulas - deepen your specialist knowledge Learning more, for example in the area of foreign languages, is also of great importance for advanced learners. You can perfect your language knowledge of style, expression, grammatical combinations and word order. When it is possible to store texts to be learnt in your subconscious while you are asleep, it is also possible to fix suggestions there. In a specific sleep sequence, receptivity for suggestions is particularly good. This sequence is optimally used to remove negative habits and inhibitory patterns of behaviour and to replace these with positive characteristics. The

possibilities here are also very varied, here are just some examples: - improving memory - weight loss in the case of overweight - strengthening self-confidence and self-awareness - improving performance and stamina - strength, relaxation and inner peace The text book *Learn while you sleep* provides you with the most useful examples of pre-defined sleep suggestions for your individual adaptation.

The Art of Mixing David Gibson, 2019-01-10 David Gibson uses 3D visual representations of sounds in a mix as a tool to explain the dynamics that can be created in a mix. This book provides an in-depth exploration into the aesthetics of what makes a great mix. Gibson's unique approach explains how to map sounds to visuals in order to create a visual framework that can be used to analyze what is going on in any mix. Once you have the framework down, Gibson then uses it to explain the traditions that have been developed over time by great recording engineers for different styles of music and songs. You will come to understand everything that can be done in a mix to create dynamics that affect people in really deep ways. Once you understand what engineers are doing to

create the great mixes they do, you can then use this framework to develop your own values as to what you feel is a good mix. Once you have a perspective on what all can be done, you have the power to be truly creative on your own – to create whole new mixing possibilities. It is all about creating art out of technology. This book goes beyond explaining what the equipment does – it explains what to do with the equipment to make the best possible mixes.

The Professor's Guide to Taming Technology

Kathleen P. King, Thomas D. Cox, 2011-01-01 This book is provided as a guide, encouragement and handbook for faculty to introduce digital media in language you can understand and provide strategies and activities you can quickly assimilate into your teaching. We are excited that more people will be able to benefit from the powerful help and guidance contained in this book. We are even more exhilarated as we anticipate how each of you will discover applications and new directions we would never anticipate, and look forward. We look forward to your innovations as you use the material you discover here. This book responds to the needs of our changing world and students by revealing innovative technology applications and how faculty are and can use digital media in teaching in higher education because faculty make

the quickest changes and learn how to do it best. It is a valuable resource for faculty from faculty, because it allows the sharing of successful teaching experiences with digital media with our worldwide colleagues so they may modify it, extend it, and improve it. Moreover, in our work with faculty across all disciplines, we also find that many struggle to think about teaching in ways in which they can incorporate technology meaningfully. While we might be experts in our discipline (chemistry, philosophy, music, etc) due to the curriculum of terminal degrees, we might not have strong preparation in instructional design. We have been fortunate to bring together faculty experts across different disciplines to specifically speak about how and why to use digital media in higher education settings. We realize we are asking you to think about your way of teaching with new ideas and strategies. Therefore, we try to illustrate them with clear examples. These different approaches include clear descriptions of what these activities look like, why to develop and implement them, and how to do so for your specific needs.
