Russian Nuclear Weapons Dr Stephen J Blank, PH D,Stephen Blank,2014-05-18 While the Cold War is long past, the importance of arms control in Russo-American relations and the related issue of nuclear weapons for Russia remain vital concerns. Indeed, without an appreciation of the multiple dimensions of the latter, progress in the former domain is inconceivable. With this in mind, following essays explore many, if not all, of the issues connected with Russia's relatively greater reliance on nuclear weapons for its security. As such, they constitute an important contribution to the analysis of the Obama administration's reset policy, Russo-American relations, Russian foreign and defense policy, and international security in both Europe and Asia. Additionally, questions concerning the approach taken by other nuclear power nations in reference to the arms control agenda provide a crucial backdrop for the progress toward curbing the proliferation of nuclear weapons, a long-standing central goal of U.S. security policy.

Up-to-date information is supplied on the relevance of PET/CT to diagnosis, treatment planning, and therapy, including the emerging role of PET/CT with PSMA. Readers will also find clear explanation of the relation of the clinical and pathological background to imaging and the value of PET/CT compared with conventional radiological imaging. Decommissioning of Underground Structures, Systems and Components International Atomic Energy Agency,2006 Underground nuclear facilities require special consideration. Firstly, due to their poor accessibility, there are significant difficulties in physical and radiological characterization, deployment of decontamination techniques, and physical disassembly and removal. Secondly, these types of components are present in a large number of nuclear installations. However, early nuclear design and construction practices often did not consider or incorporate eventual decommissioning requirements in their design considerations and these requirements were not commonly enforced in the early nuclear era. This is also true for those facilities situated in countries that do not have sufficient experience/expertise in performing decommissioning. Thirdly, a comprehensive assessment of the literature on nuclear decommissioning of underground components shows that this subject has not yet received any systematic coverage, despite the technical difficulties that have been encountered in actual projects to date. In fact, the literature on this subject is comprised of rather sporadic case histories. This report is intended to draw attention to a neglected field and to collate/condense sporadic information into an overview of important factors and practical guidance

Life Cycle Assessment Aiduan Borrion,Mairi J Black,Onesmus Mwabonje,2021-03-19 Life cycle assessment (LCA) is an established methodology used to quantify the environmental impacts of products, processes and services. Circular economy (CE) thinking is conceptual way of considering the impacts of consuming resources. By taking a closed loop approach, CE provides a framework for influencing behaviours and practices to minimise this impact. Development of the circular economy is a crucial component in the progression towards future sustainability. This book provides a robust systematic approach to the circular economy concept, using the established methodology of LCA. Including chapters on circular economic thinking, the use of LCA as a metric and linking LCA to the wider circular economy, this book utilises case studies to illustrate the approaches to LCA. With contributions from researchers worldwide, Life Cycle Assessment provides a practical, global guide for those who wish to use LCA as a research tool or to inform policy, process, and product improvement.

Sustainable Intensification Jules N. Pretty,Stella Williams,Camilla Toulmin,2012-06-25 Continued population growth, rapidly changing consumption patterns and the

impacts of climate change and environmental degradation are driving limited resources of food, energy, water and materials towards critical thresholds worldwide. These pressures are likely to be substantial across Africa, where countries will have to find innovative ways to boost crop and livestock production to avoid becoming more reliant on imports and food aid. Sustainable agricultural intensification - producing more output from the same area of land while reducing the negative environmental impacts - represents a solution for millions of African farmers. This volume presents the lessons learned from 40 sustainable agricultural intensification programmes in 20 countries across Africa, commissioned as part of the UK Government's Foresight project. Through detailed case studies, the authors of each chapter examine how to develop productive and sustainable agricultural systems and how to scale up these systems to reach many more millions of people in the future. Themes covered include crop improvements, agroforestry and soil conservation, conservation agriculture, integrated pest management, horticulture, livestock and fodder crops, aquaculture, and novel policies and partnerships.

Nausea and Vomiting: Mechanisms and Treatment Christopher J. Davis,Gerry V. Lake-Bakaar,David G. Grahame-Smith,2012-12-06 The following papers were presented at an international symposium on the mechanisms and treatment of nausea and vomiting in man held in Oxford in 1984. I believe that this meeting was the first occasion on which representatives from such a wide variety of scientific and clinical specialities had come together to review and debate the spectrum of the vomiting phenomenon. An attempt was made to put before an invited international audience all the pertinent facts on the different facets of the topic and then to encourage extensive discussion of the contentious issues. The first day of the meeting was devoted to the basic science approach to the problem and the second day to the more clinical aspects. This format has been broadly retained in the layout of the book, with the addition of summary chapters reviewing each day's contributions and focusing upon areas of particular importance. Acknowledgement must here be made to the enormous input from the many participants who either spoke in the debate or rose and themselves gave small presentations in addition to those of the invited speakers. The meeting occurred at a time of increasing interest in the problem of nausea and vomiting, especially because of its importance in cancer chemotherapy and radiation therapy, and even in space travel.
