Advances in Information and Computer Security Tsuyoshi Takagi, Masahiro Mambo, 2009-10-15 The Fourth International Workshop on Security (IWSEC 2009) was held at Toyama International Conference Center, Toyama, Japan, October 28-30, 2009. The workshop was co-organized by CSEC, a special interest group on computer security of the IPSJ (Information Processing Society of Japan) and ISEC, a technical group on information security of IEICE (The Institute of Electronics, Information and Communication Engineers). The excellent Local Organizing Committee was led by the IWSEC 2009 General Co-chairs, Kazuo Takaragi and Hiroaki Kikuchi.

IWSEC2009 received 46 paper submissions from all over the world. We would like to thank all the authors who submitted papers. Each paper was reviewed by at least three reviewers. In addition to the Program Committee members, many external reviewers joined the review process in their particular areas of expertise. We were fortunate to have this energetic team of experts, and are grateful to all of them for their hard work. The hard work includes very active discussion; the discussion phase was almost as long as the initial individual reviewing. The review and discussion were supported by a very nice Web-based system, iChair. We thank its developers. Following the review phases, 13 papers were accepted for publication in this volume of *Advances in Information and Computer Security*. Together with the contributed papers, the workshop featured an invited talk and a hash function panel both of which were respectively given and chaired by eminent researcher, Bart Preneel (Katholieke Universiteit Leuven). An abstract of the talk, titled "The Future of Cryptographic Algorithms," is included in this volume. We deeply appreciate his contribution. Many people contributed to the success of IWSEC 2009. We wish to express our deep appreciation for their contribution to information and computer security.

Cybercrime Robert Moore, 2014-09-25 This innovative text provides an excellent introduction to technology-assisted crime and the basics of investigating such crime, from the criminal justice perspective. It presents clear, concise explanations for students and professionals, who need not be technically proficient to find the material easy-to-understand and practical. The book begins by identifying and defining the most prevalent and emerging high-technology crimes — and exploring their history, their original methods of commission, and their current methods of commission. Then it delineates the requisite procedural issues associated with investigating technology-assisted crime. In addition, the text provides a basic introduction to computer forensics, explores legal issues in the admission of digital evidence, and then examines the future of high-technology crime, including legal responses.
