Salami Gerhard Feiner, 2016-07-26 Salami: Practical Science and Processing Technology is a one-of-a-kind reference that covers all types of salami products from around the world, including all aspects of salami, such as microbiology, food safety, and research development trends. It provides the latest scientific findings and developments used to describe the production and manufacturing processes that lead to products that are produced efficiently and safe to eat. The book is a comprehensive resource that combines a scientific and hands-on approach that is useful not only to those in the industry, but also students of meat science. The purpose of the book is to give clear and helpful guidelines to professionals within the meat-processing industry, such as technical, production, operations, process improvement, quality control, and research and development managers. Provides food safety summaries at the end of each chapter Includes detailed information on the composition and function of raw meat, additives, and technologies Presents recipes on how salami is produced by linking theory and science with the process of making salami Describes how to avoid faulty products and control food safety, etc.

**Operations in Food Refrigeration** Rodolfo H. Mascheroni, 2012-06-06 The final quality of a food product is impacted heavily by preservation technologies, such as chilling, freezing, and freeze-drying, as well as the numerous pretreatments that are routinely applied to foods. Adequate design and implementation of each of these treatments are critical to ensuring the integrity of the final food product, the productivity of the equipment, and reduced operation costs. Operations in Food Refrigeration explores the fundamental issues involved in heat and mass transfer in food refrigeration and examines aspects of other operations applied to chilled or frozen foods. Following an overview of basic concepts and general calculation procedures involved in cooling, freezing, thawing, and freeze-drying, the book discusses: Sizing, peeling, cutting, sorting, and blanching fruits

and vegetables Pretreatments for meats, including tenderization, electrical stimulation, portioning, curing, and smoking Pretreatments for fish and other seafood Processing of poultry Air and osmotic partial dehydration, infusion of special nutrients, and the concentration of juices Traditional chilling and freezing methods Special precooling and freezing techniques The effects of thawing on food, factors that influence the choice and design of thawing processes, and various thawing methods Freeze-drying equipment Each chapter is written by a recognized specialist and can serve as a stand-alone resource for the particular topic. Several chapters present case studies that can be used for developing processes or in teaching applications. Processors, researchers, and educators in the food industry will find this volume to be an invaluable reference for a host of food operations.

**Handbook of Food Engineering Practice** Kenneth J. Valentas, Enrique Rotstein, R. Paul

Singh,1997-07-23 Food engineering has become increasingly important in the food industry over the years, as food engineers play a key role in developing new food products and improved manufacturing processes. While other textbooks have covered some aspects of this emerging field, this is the first applications-oriented handbook to cover food engineering processes and manufacturing techniques. A major portion of Handbook of Food Engineering Practice is devoted to defining and explaining essential food operations such as pumping systems, food preservation, and sterilization, as well as freezing and drying. Membranes and evaporator systems and packaging materials and their properties are examined as well. The handbook provides information on how to design accelerated storage studies and determine the temperature tolerance of foods, both of which are important in predicting shelf life. The book also examines the importance of physical and rheological properties of foods, with a special look at the rheology of dough and the design of processing systems for the manufacture of dough. The final third of the book provides useful supporting material that applies to all of the previously discussed unit operations, including cost/profit analysis methods, simulation procedures, sanitary guidelines, and process controller design. The book also includes a survey of food chemistry, a critical area of science for food engineers.

Recipes include: Cajun Spiced Pork Tenderloin, Filet Mignon with Red Wine, Roast Beef with Horseradish Sauce, Pappardelle with Pesto, Pasta with Roasted Asparagus, Stir-Fried Shrimp with Snow Peas, Chicken Pot Pie with Phyllo, Biscuit and Hamburger Pie, and more.

**Backyard Farming on an Acre (More or Less)** Angela England,2012-12-04 As food prices continue to rise, more and more people have discovered that they can create their own food supply, right on their own property, and at a fraction of the price of conventional farm food that's been shipped to their local grocery from locations unknown. By raising and harvesting their own fruits,

vegetables, chickens, bees, milk-bearing animals, and more, people are growing locally, sustainably, and at a fraction of the cost. However, poor planning for needs, proper use of available space, and a lack of preparedness for preserving or selling the harvest can quickly lead to wasted time and sweat. Backyard Farming on an Acre (More or Less) is written by people who have planned and run a successful small-scale backyard farm. The authors guide readers through the essentials of planning a small-scale farm from a 1/4 acre all the way up to an acre and beyond. Readers will learn how to decide how large (or small) their farm should be, what they should plant or raise based on their individual wants and needs (and available space), and how they can prevent their efforts from being wasted. Proven, sustainable techniques will be presented to readers so they can yield the maximum benefit of their harvest through proven best practices. Readers will also learn how to raise small animals such as chickens and goats for milk, eggs, and meat, and will learn the critical practices for successfully parenting bees, growing fruit trees, and much more.
