Mobile Computing and Wireless Communications Amjad Umar, 2004 This book, suitable for IS/IT courses and self study, presents a comprehensive coverage of the technical as well as business/management aspects of mobile computing and wireless communications. Instead of one narrow topic, this classroom tested book covers the major building blocks (mobile applications, mobile computing platforms, wireless networks, architectures, security, and management) of mobile computing and wireless communications. Numerous real-life case studies and examples highlight the key points. The book starts with a discussion of m-business and m-government initiatives and examines mobile computing applications such as mobile messaging, m-commerce, M-CRM, M-portals, M-SCM, mobile agents, and sensor applications. The role of wireless Internet and Mobile IP is explained and the mobile computing platforms are analyzed with a discussion of wireless middleware, wireless gateways, mobile application servers, WAP, i-mode, J2ME, BREW, Mobile Internet Toolkit, and Mobile Web Services. The wireless networks are discussed at length with a review of wireless communication principles, wireless LANs with emphasis on 802.11 LANs, Bluetooth, wireless sensor networks, UWB (Ultra Wideband), cellular networks ranging from 1G to 5G, wireless local loops, FSO (Free Space Optics), satellites communications, and deep space networks. The book concludes with a review of the architectural, security, and management/support issues and their role in building, deploying and managing

wireless systems in modern settings.

Short Message Service (SMS) Friedhelm Hillebrand, 2010-01-21 Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, Short Message Service (SMS): The Creation of Personal Text Messaging, describes the development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS

evolution is put forward.

Mobile Design and Development Brian Fling, 2009-08-14 Mobile devices outnumber desktop and laptop computers three to one worldwide, yet little information is available for designing and developing mobile applications. Mobile Design and Development fills that void with practical guidelines, standards, techniques, and best practices for building mobile products from start to finish. With this book, you'll learn basic design and development principles for all mobile devices and platforms. You'll also explore the more advanced capabilities of the mobile web, including markup, advanced styling techniques, and mobile Ajax. If you're a web designer, web developer, information architect, product manager, usability professional, content publisher, or an entrepreneur new to the mobile web, Mobile Design and Development provides you with the knowledge you need to work with this rapidly developing technology. Mobile Design and Development will help you: Understand how the mobile ecosystem works, how it differs from other mediums, and how to design products for the mobile context Learn the pros and cons of building native applications sold through operators or app stores versus mobile websites or web apps Work with flows, prototypes, usability practices, and screen-size-independent visual designs Use and test cross-platform mobile web standards for older devices, as well as devices that may be available in the future Learn how to justify a mobile product by building it on a budget

SMS Uprising: Mobile Activism in Africa Sokari Ekine, 2010-01-30 Providing a

unique insight into how activists and social change advocates are addressing Africa's many challenges from within, this collection of essays by those engaged in using mobile phone technologies for social change provides an analysis of the socioeconomic, political, and media contexts faced by activists in Africa today. The articles address a broad range of issues--including inequalities in access to technology based on gender and rural and urban usage--and it offers practical examples of how activists are using mobile technology to organize and document their experiences. An overview of the lessons learned in making effective use of mobile phone technologies without any of the romanticism so often associated with the use of new technologies for social change is given. Examples are shared in a way that makes them easy to replicate, hoping to lead to greater reflection about the real potential and limitations of mobile technologies. Contributors include Ken Banks, Nathan Eagle, Anil Naidoo, Berna Ngolobe, and Juliana Rotich.

Mobile Tech Report 2015 John R. Roberts, 2015-02-23 If you read technology news, you'll notice it's not just a story of amazing new product introductions, or even that plus copycat product introductions. All the usual aspects of business are there: fierce competition, new contenders, old survivors, great ideas but business failures, mediocre ideas that somehow seem to succeed and prosper. As a reporter, commentator and blogger on mobile technology, I've collected what happened in the industry in 2014 and make predictions on what will and won't happen in 2015. You can read what did happen in the mobile technology in 2014. Often I deliver a comment with the news item and usually there is a link to the web page of the original announcement. This way you can dive into any detail level you desire, read my

news feed for the overview or follow the related web link to the longer article. History is moving so fast now that it is all recorded electronically, but I'm surprised no one else has collected it and presented it for consideration. Here is 2013 from the mobile technology industry for your consideration along with my own observations and opinions about where things are headed. It's often overlooked that the technology industry is an industry. By that I mean its main concerns are profit and growth. As consumers we love the new products and unique abilities we are gaining from technology, but it is a business akin to any other, trying to seduce us to pry money out of our wallets. So I cover the horse race aspect of the business, who's up, who's down. Is that changing? Is that likely to change? The longer implications of what the technology industry is doing are vast and social. We are moving to an always on, always connected society where we can communicate with someone instantly and find an answer to any question quickly. The entire database of human knowledge is now available in the palm of your hand whenever you desire it. Everything is there, the good, the bad, right and wrong, hate and love, music and noise. We are obsessed with technology, not in and of itself, but as a means to an end. Technology is the means to satisfy our curiosity or even our desire for self-expression. We are taking photos machine gun-style with our smartphones and choose the few to share. As humans we are gathering ever more data about ourselves and sharing more about ourselves than we probably thought possible. Bill Gates was once

asked why the computer industry had generated so much improvement in its products over a relatively few years. He gave some boring answer about Moore's Law, but the real answer is that computers are in their teenage years. They are growing and growing. They will not always do so. So too the technology industry is in a state of rapid change. I see the shift to smaller devices as a new paradigm, smashing some businesses and growing others into giants. Their stories are here in the news. In short here are predictions for what won't and will happen in 2015 for the mobile technology industry, breakdowns of marketshare figures on the horse race aspect of the business, chapters on Apple, Samsung, Google, Microsoft, Nokia, Blackberry, Amazon, Yahoo, news about social media giants Facebook, Twitter, Google+, LinkedIn, Foursquare, SnapChat and the carriers themselves Verizon, AT&T, Sprint and T-Mobile. You can also review my 2014 mobile predictions and see my track record on predictions. Finally there are some essays on how all this mobile tech is figuring into our lives. I've divided the news into the subjects it covers, but also put in the appendix all the news as it came out in chronological ordering. You can read the firehose of events in the appendix, or just read about one topic at a time in the earlier chapters.

Governance of Communication Networks Brigitte Preissl, Jürgen

Müller,2007-01-30 Few would doubt the potential of information technology to connect individuals, firms and organisations. Whether this will actually lead to the integration of markets and societies is a different issue. The articles collected in this book shed light on crucial considerations for the success of global communication networks. These include frameworks for regulation, inclusion of customers in defining product and service strategies, access to advanced technology and networks for all groups, and more.

Personalized Context-Aware Mobile Notification System Sternly K`

Simon, 2013-12-21 This book presents an overview of the components, approaches and techniques which are used to build a mobile phone application that uses short messaging service (SMS) text messages to improve interaction, information distribution and communication of stakeholders in a university setting. The proposed application is built upon a multiple compatible mobile phone menu-based subscription management application that is also customizable. Since SMS has the potential to fill significant connectivity and service gaps, this application can provide support for them to become more ubiquitous. Event-based approach towards context-aware personalized notification service is adopted, i.e. user will receive relevant immediate SMS to his/her mobile phone based on his/her subscription for preferred notifications. A trigger enables event management system to send out (semi-) automated personalized notification. Notification services that understand the context within which their users operate, i.e. identity, activity and time are derived based on a set of predetermined rules. This will benefit the stakeholders in terms of getting up-to-date notifications.

3G Marketing Tomi T. Ahonen, Timo Kasper, Sara Melkko, 2005-07-08 Next generation wireless is not about technology, it is all about marketing.... It provides a perfect and invaluable introduction for anybody entering mobile telecoms or companies faced with the need to partner with operators as crucially, it explains how services and applications can be brought to the market in the fiercely competitive 3G marketplace.

Mobile Telecommunication Customer Loyalty in Nigeria: Determining Factors
Olayiwola Bello, 2012-11 With the increasing competition on the market, customer loyalty has become a decisive factor for long-term business profits. At its high, customer loyalty connotes the high entry barriers the competitor faces when entering the market, and it contributes significantly to a reduction of marketing costs. To attract new customers, companies are required to invest a lot of time and money which can result in uncertainties and risks over longer periods of time. The number of loyal customers as a sign of market share is more significant than the total number of customers. More loyal customers translate to high profits. Loyal customers will continue to purchase or receive the product or service from the same enterprises, and they will be willing to pay higher prices for the quality products and first-class services, thereby increasing sales revenue. Consequently, the focus of many enterprise managers at this point is on marketing management aspects to improve customer loyalty in order to gain the competitive advantage in the face of fierce competition. The importance of customer loyalty has been identified by many researchers and academics in the past years. This importance is also predominant in the telecommunication industry and, consequently, the Nigerian telecom industry. This book attempts to assess and analyze the variables that influence a mobile phone subscriber's loyalty and how Nigerian service providers can enhance this loyalty. The study is based

on a survey that uses the quantitative approach. A structured questionnaire was developed and personally administered to a sample of University of Ilorin students across four major GSM operators in the country. Four hundred (400) respondents were sampled through a stratified random sampling. Out of this, three hundred and forty-eight (348) copies of the questionnaire, constituting an 87% response rate, could be used for the analysis. Of the eleven (11) operational factors that were used to assess loyalty of customers in the Nigeria Mobile Telecoms industry, all variables except Brand Image and Service Centre Quality were found to be capable of influencing customer loyalty and also considered as the most important loyalty variables in the industry. The unavailability of Mobile Number Portability was found to be a prominent factor in tying consumers down to service providers, while the generally low satisfaction with the present state of service delivery in the industry also plays a role. Therefore, the retention which the service providers were able to enjoy can be described as circumstantial. The given recommendations include that the service providers embark upon drives that will reduce dropped calls to a bare minimum, that they improve call quality, and that they develop SMS delivery standards.
