Computer Security and the Internet Paul C. van Oorschot,2020-04-04 This book provides a concise yet comprehensive overview of computer and Internet security, suitable for a one-term introductory course for junior/senior undergrad or first-year graduate students. It is also suitable for self-study by anyone seeking a solid footing in security – including software developers and computing professionals, technical managers and government staff. An overriding focus is on brevity, without sacrificing breadth of core topics or technical detail within them. The aim is to enable a broad understanding in roughly 350 pages. Further prioritization is supported by designating as optional selected content within this. Fundamental academic concepts are reinforced by specifics and examples, and related to applied problems and real-world incidents. The first chapter provides a gentle overview and 20 design principles for security. The ten chapters that follow provide a framework for understanding computer and Internet security. They regularly refer back to the principles, with supporting examples. These principles are the conceptual counterparts of security-related error patterns that have been recurring in software and system designs for over 50 years. The book is “elementary” in that it assumes no background in security, but unlike “soft” high-level texts it does not avoid low-level details, instead it selectively dives into fine points for exemplary topics to concretely illustrate concepts and principles. The book is rigorous in the sense of being technically sound, but avoids both mathematical proofs and lengthy source-code examples that typically make books inaccessible to general audiences. Knowledge of elementary operating system and networking concepts is helpful, but review sections summarize the essential background. For graduate students, inline exercises and supplemental references provided in per-chapter endnotes provide a bridge to further topics and a springboard to the research literature; for those in industry and government, pointers are provided to helpful surveys and relevant standards, e.g., documents from the Internet Engineering Task Force (IETF), and the U.S. National Institute of Standards and Technology.

Economics of Information Security and Privacy III Bruce Schneier,2012-09-26 The Workshop on the Economics of Information Security (WEIS) is the leading forum for interdisciplinary scholarship on information security, combining expertise from the fields of economics, social science, business, law, policy and computer science. Prior workshops have explored the role of incentives between attackers and defenders, identified market failures dogging Internet security, and assessed investments in cyber-defense. Current contributions build on past efforts using empirical and analytic tools to not only understand threats, but also strengthen security through novel evaluations of available solutions. Economics of Information Security and Privacy III addresses the following questions: how should information risk be modeled given the constraints of rare incidence and high interdependence; how do individuals' and organizations' perceptions of privacy and security color their decision making; how can we move towards a more secure information infrastructure and code base while accounting for the incentives of stakeholders?

As we move away from traditional disk-based analysis into the interconnectivity of the cloud, Sherri and Jonathan have created a framework and roadmap that will act as a seminal work in this developing field.” – Dr. Craig S. Wright (GSE), Asia Pacific Director at Global Institute for Cyber Security + Research. “It’s like a symphony meeting an encyclopedia meeting a spy novel.” –Michael Ford, Corero Network Security On the Internet, every action leaves a mark—in routers, firewalls, web proxies, and within network traffic itself. They need clear guidance on safe coding practices, and that's exactly what this book delivers. The book does not delve deep into theory, or rant about the politics of security. Instead, it clearly and simply lays out the most common threats that programmers need to defend against. It then shows programmers how to make their defense. The book takes a broad focus, ranging over SQL injection, worms and buffer overflows, password security, and more. It sets programmers on the path towards successfully defending against the entire gamut of security threats that they might face.

Indian Classical Music and the Gramophone, 1900–1930 Vikram Sampath,2022-06-30 In 1902 The Gramophone Company in London sent out recording experts on expeditions across the world to record voices from different cultures and backgrounds. All over India, it was women who embraced the challenge of overcoming numerous social taboos and aesthetic handicaps that came along with this nascent technology. Women who took the plunge and recorded largely belonged to the courtesan community, called tawaifs and devadasis, in North and South India, respectively. Recording brought with it great fame, brand recognition, freedom from exploitative patrons, and monetary benefits to the women singers. They were to become pioneers of the music industry in the Indian sub-continent. However, despite the pioneering role played by these women, their stories have largely been forgotten. Contemporaneous with the courtesan women adapting to recording technology was the anti-nautch campaign that sought to abolish these women from the performing space and brand them as common prostitutes. A vigorous renaissance and arts revival movement followed, leading to the creation of a new classical paradigm in both North Indian (Hindustani) and South Indian (Carnatic) classical music. This resulted in the standardization, universalization, and institutionalization of Indian classical music. This newly created classical paradigm impacted future recordings of The Gramophone Company in terms of a shift in genres and styles. Vikram Sampath sheds light on the role and impact of The Gramophone Company's early recording expeditions on Indian classical music by examining the phenomenon through a sociocultural, historical and musical lens. The book features the indefatigable stories of the women and their experiences in adapting to recording technology. The artists from across India featured are: Gauhar Jaan of Calcutta, Janki Bai of Allahabad, Zohra Bai of Agra, Malka Jaan of Agra, Salem Godavari, Bangalore Nagarathnamma, Coimbatore Thayi, Dhanakoti of Kanchipuram, Bai Sundarabai of Pune, and Husna Jaan of Banaras.
