The Mathematical Development of the End-point Method S. Frankel, S. Goldberg, 1949 The end-point method is mathematically developed and its application to the Milne kernel studied in detail. The general solution of the Wiener-Hopf integral equation is first obtained. The Milne kernel appears in applying this method to the integral equation describing the diffusion and multiplication of neutrons in multiplying and scattering media. The neutrons are treated as monochromatic, isotropically scattered and of the same total mean free path in all materials involved. Only problems with spherical symmetry are treated, these being reducible to equivalent infinite slab problems. Solutions are obtained for tamped and untamped spheres; in the former case both growing and decaying exponential asymptotic solutions in the tamper are treated in detail. Appendix I treats the effects of the approximations inherent in the end-point method (cf. LADC - 79). Appendix II gives the solution of the inhomogeneous Wiener-Hopf equation. (AN)

Separation of a Gas Mixture Flowing Through a Long Tube at Low Pressure Richard David Present, 1949 The separation of a binary gas mixture by diffusion through a capillary of radius r depends on the fact that the molecules have different masses m_i and mean speeds v_i . When the inlet pressure is so low that the mean free path λ is much greater than r , the flow is diffusive and the separation factor (at zero outlet pressure) has its maximum value $(m_1/m_2)^{1/2}$. At high pressures (λ less than or equal to r) no separation occurs. This paper treats the intermediate case ($\lambda \approx r$) where the transfer of forward momentum from light to heavy molecules in unlike collisions equalizes the transport velocities and decreases the separation factor. As the inlet pressure rises, this effect makes the flow nonseparative before it becomes viscous. Flow equations are derived by equating the momentum acquired by the light component from the pressure gradient to the momentum lost to the wall plus that transferred to the other component. The viscous effects are treated as a small additive perturbation on the flow. The integrated flow equations express the separation factor as a function of the inlet and outlet pressures.

Free Boundaries in Rock Mechanics Anvarbek Meirmanov, Oleg V. Galtsev, Reshat N. Zimin, 2017-09-11 This monograph is concerned with free-boundary problems of partial differential equations arising in the physical sciences and in engineering. The existence and uniqueness of solutions to the Hele-Shaw problem are derived and techniques to deal with the Muskat problem are discussed. Based on these, mathematical models for the dynamics of cracks in underground rocks and in-situ leaching are developed. Contents Introduction The Hele-Shaw problem A joint motion of two immiscible viscous fluids Mathematical models of in-situ leaching Dynamics of cracks in rocks Elements of continuum mechanics

The Overthinking Trap: How to Break Free from the Chains of Excessive Analysis and Live Fully Martín Arellano, In today's dynamic and often overwhelming world, The Overthinking Trap emerges as an essential guide for those who find themselves caught in the maze of excessive thinking. This book not only unravels the enigma of over-analysis but also offers practical and accessible strategies to overcome this paralyzing habit and achieve a fuller, more satisfying life. From the first page, the reader is introduced to a journey of self-discovery and transformation. The book begins by exploring the roots of overthinking, differentiating between healthy reflection and destructive rumination. Throughout its chapters, the author unfolds a masterful blend of psychological theory and real-life experiences, making the content not only informative but also deeply relatable. As we progress through the book, we confront the multidimensional impacts of overthinking in our lives: from analysis paralysis to the emotional and physical consequences, not to mention how it affects our relationships. This thorough analysis is complemented by a series of practical tools to combat excessive thinking. Mindfulness techniques, cognitive strategies, and the importance of self-care are presented not just as theories but as applicable practices in daily life. The author does not just stop at the problem but also guides the reader towards reconnecting with the present, highlighting the power of now and providing exercises to live in the moment and cultivate gratitude. The transition from reflection to action, and how small steps can lead to significant changes, is a central theme that resonates throughout the book, culminating in a reconstruction of our mental processes towards a growth mindset. The Overthinking Trap is not just a book; it is a companion on the journey towards the balance between thought and action. With advanced strategies for mental liberation, the book positions itself as an indispensable resource for those seeking to build mental resilience and live beyond excessive analysis. The book concludes with a powerful and hopeful message, inviting readers to embrace a balanced life, centered in the present, freeing themselves from the chains of overthinking.

Insertion Devices for Synchrotron Radiation and Free Electron Laser F Ciocci, G Dattoli, A Torre, A Renieri, 2000-06-27 This book describes the basic properties of charged beam transport and the theory of accelerators with radiative damping. The characteristics of the third generation synchrotron radiation sources are analyzed and compared to those of the first and second generations. This is followed by the conceptual and technological problems associated with the discovery of the fourth generation sources. Within this framework, the role played by free electron laser devices is discussed and relevant theoretical and technological aspects of storage-ring and Linac-based sources are analyzed. Plastic-Free Beth Terry,2015-04-21 “Guides readers toward the road less consumptive, offering practical advice and moral support while making a convincing case that individual actions . . . do matter.” —Elizabeth Royte, author, *Garbage Land* and *Bottlemania* Like many people, Beth Terry didn’t think an individual could have much impact on the environment. But while laid up after surgery, she read an article about the staggering amount of plastic polluting the oceans, and decided then and there to kick her plastic habit. In *Plastic-Free*, she shows you how you can too, providing personal anecdotes, stats about the environmental and health problems related to plastic, and individual solutions and tips on how to limit your plastic footprint. Presenting both beginner and advanced steps, Terry includes handy checklists and tables for easy reference, ways to get involved in larger community actions, and profiles of individuals—*Plastic-Free Heroes*—who have gone beyond personal solutions to create change on a larger scale. Fully updated for the paperback edition, *Plastic-Free* also includes sections on letting go of eco-guilt, strategies for coping with overwhelming problems, and ways to relate to other people who aren’t as far along on the plastic-free path. Both a practical guide and the story of a personal journey from helplessness to empowerment, *Plastic-Free* is a must-read for those concerned about the ongoing health and happiness of themselves, their children, and the planet.

Performance of Imaging Laser Radar in Rain and Fog Kathleen M. Campbell,Air Force Institute of Technology (U.S.),1998-03-01 The Air Force is currently developing imaging laser radar systems (ladar) for use on precision guided munitions and other imaging systems. Scientists at Eglin Air Force Base, in conjunction with Wright Laboratories, are testing a 1.06-um wavelength ladar system and need to understand the weather effects on the ladar images. As the laser beam propagates through the atmosphere, fog droplets and raindrops can cause image degradation, and these image degradations are manifested as either dropouts or false returns. An analysis of the dropouts and false returns helped to quantify the performance of the system in adverse weather conditions. Statistical analysis of the images showed non-linear relationships existed between variables, plus graphical analysis demonstrated the behavior of the dropouts and false returns with changing weather conditions. Statistical control charts identified the weather as a significant influence on the quality of the ladar images. By focusing on the false return data, a study of mean free path and the survival equation was accomplished. The mean free path was derived from the rainfall rate, and this mean free path was used in the survival equation to calculate an expected number of false returns for an image. This work led to the hypothesis that raindrops with a diameter of 3.0 mm and larger were causing the false returns seen in the images. However, further analysis revealed that a 3.0-mm raindrop was not capable of scattering enough energy to be detected by the system. It was then hypothesized that the system detector was also picking up solar spectrum energy scattered by raindrops, and that this detector was unable to distinguish between solar energy and laser energy scattered by raindrops.
