*Mosaic Puzzles* Clarity Media,2015-05-26 Mosaic is a wonderfully addictive picture-forming logic puzzle. The puzzle starts with a rectangular grid that has lots of empty squares, and some containing numbers. These numbers represent how many cells are to be coloured in, which include the cell itself and all its neighbours that touch it directly, including diagonally. So in the middle of a grid, if you see the number 9, then you know you can immediately colour in the square itself and its eight neighbours. At the edge of the grid, the highest possible number is 6, and in one of the corners, the number drops to 4. If you see a 0, then you immediately know the square itself and its neighbours are blank - you might like to mark these with a dot so you remember. Once you have completely worked out which filled cells surround each numbered cell such that the number of filled cells matches the number in those given cells, the puzzle is finished, and will reveal a simple piece of black and white artwork. Each puzzle has one solution, and you can always find it through logic alone - you'll never need to guess, although some logical moves can be tricky to spot and will require you to cross-reference

values in nearby squares. All puzzle books are printed on very high quality paper, allowing for lots of pen and pencil marks along the way! For other puzzle books and gift ideas, visit [www.puzzle-book.co.uk](http://www.puzzle-book.co.uk)

Mosaic Picture Puzzles Clarity Media,2019-04-05 Mosaic is a wonderfully addictive picture-forming logic puzzle. This book contains 50 brand-new mosaic picture-forming logic puzzles. The puzzles will require extensive cross-referencing between the values in neighboring squares, so the puzzles are suitable for experienced mosaic puzzle solvers looking for hard puzzles that will take time and patience to solve. These are not easy, quick to solve puzzles. The puzzle starts with a rectangular grid that has lots of empty squares, and some containing numbers. These numbers represent how many cells are to be coloured in, which include the cell itself and all its neighbours that touch it directly, including diagonally. So in the middle of a grid, if you see the number 9, then you know you can immediately

colour in the square itself and its eight neighbours. At the edge of the grid, the highest possible number is 6, and in one of the corners, the number drops to 4. If you see a 0, then you immediately know the square itself and its neighbours are blank - you might like to mark these with a dot so you remember. Once you have completely worked out which filled cells surround each numbered cell such that the number of filled cells matches the number in those given cells, the puzzle is finished, and will reveal a simple piece of black and white artwork. Each puzzle has one solution, and you can always find it through logic alone - you'll never need to guess to solve any of the puzzles in this book: the solving rules required can be tough but they are always fair. At times you will need to cross-reference between the numbers in neighbouring squares in order to reduce the options and make progress, but it is always possible to advance through logic alone. You may find progress hard to make at times and wonder if it possible to solve the puzzles without guessing, please be reassured that guessing is NOT required to solve these puzzles, you will simply need to carefully and persistently cross-reference the values in neighbouring squares to deduce which squares can or cannot be shaded. All puzzle books

are printed on very high quality paper, allowing for lots of pen and pencil marks along the way!
