Design and Simulation of Heavy Haul Locomotives and Trains Maksym Spiryagin, Peter Wolfs, Colin Cole, Valentyn Spiryagin, Yan Quan Sun, Tim McSweeney, 2016-10-03 With the increasing demands for safer freight trains operating with higher speed and higher loads, it is necessary to implement methods for controlling longer, heavier trains. This requires a full understanding of the factors that affect their dynamic performance. Simulation techniques allow proposed innovations to be optimised before introducing them into the operational railway environment. Coverage is given to the various types of locomotives used with heavy haul freight trains, along with the various possible configurations of those trains. This book serves as an introductory text for college students, and as a reference for engineers practicing in heavy haul rail network design,

Dynamics of Vehicles on Roads and Tracks Vol 2 Maksym Spiryagin, Timothy Gordon, Colin Cole, Tim McSweeney, 2017-12-06 The International Symposium on Dynamics of Vehicles on Roads and Tracks is the leading international gathering of scientists and engineers from academia and industry in the field of ground vehicle dynamics to present and exchange their latest innovations and breakthroughs. Established in Vienna in 1977, the International Association of Vehicle System Dynamics (IAVSD) has since held its biennial symposia throughout Europe and in the USA, Canada, Japan, South Africa and China. The main objectives of IAVSD are to promote the development of the science of vehicle dynamics and to encourage engineering applications of this field of science, to inform scientists and engineers on the current state-of-the-art in the field of vehicle dynamics and to broaden contacts among persons and organisations of the various countries engaged in scientific research and development in the field of vehicle dynamics and related areas. IAVSD 2017, the 25th Symposium of the International Association of Vehicle System Dynamics was hosted by the Centre for Railway Engineering at Central Queensland University, Rockhampton, Australia in August 2017. The symposium focused on the following topics related to road and rail vehicles and trains: dynamics and stability; vibration and comfort; suspension; steering; traction and braking; active safety systems; advanced driver assistance systems; autonomous road and rail vehicles; adhesion and friction; wheel-rail contact; tyre-road interaction; aerodynamics and crosswind; pantograph-catenary dynamics; modelling and simulation; driver-vehicle interaction; field and laboratory testing; vehicle control and mechatronics; performance and optimization; instrumentation and condition monitoring; and environmental considerations. Providing a comprehensive review of the latest innovative developments and practical applications in road and rail vehicle dynamics, the 213 papers now published in these proceedings will contribute greatly to a better understanding of related problems and will serve as a

reference for researchers and engineers active in this specialised field. Volume 2 contains 135 papers under the subject heading Rail.

David Ratcliffe,2012-12-01 Covering the operation of freight trains since the end of main-line steam in 1968, this title is a largely pictorial examination of the considerable variety of traffic and the vast array of different types of wagon - including both air - and vacuum-braked - that have been utilised by the railways over the past 40 years.

Guidebook for Implementing Passenger Rail Service on Shared Passenger and Freight Corridors Alan J. Bing,2010 This Guidebook will aid states in developing public-private partnerships with private freight railroads to permit operation of passenger services over shared-use rail corridors. The Guidebook should encourage the broad acceptance of improved principles, processes, and methods to support agreements on access, allocation of operation and maintenance costs, capacity allocation, operational issues, future responsibilities for infrastructure improvements, and other fundamental issues that will affect the ultimate success of shared-use passenger and freight agreements between public and private railroad stakeholders.

Freight Train Operation for the Railway Modeller Bob Essery,R. J. Essery,2006 The origins of the railway industry lay in the need to carry the products of Britain's industries from source to market. Freight was the bedrock of the railways' prosperity. Useful for railway historians and modellers alike, this book describes the nature of freight operation in the steam era.

Representing Freight in Air Quality and Greenhouse Gas Models Louis Harold Browning,2010 This report presents an evaluation of the current methods used to generate air emissions information from all freight transportation activities and discusses their suitability for purposes such as health and climate risk assessments, prioritization of emission reduction activities (e.g., through State Implementation Plans), and public education. The report is especially valuable for (1) its identification of the state of the practice, gaps, and strengths and limitations of current emissions data estimates and methods and (2) its conceptual model

that offers a comprehensive representation of freight activity by all transportation modes and relationships between modes. This report will better inform the near-term needs of public and private stakeholders regarding the quality of emissions data and guide future research that links freight activities with air emissions.--pub. desc.

Freight Train Cars Mike Schafer,Mike McBride,1999 In the world of railway enthusiasts and modelers, freight carriers are every bit as technically involved and evocative as engines and cabooses. This color gallery pictures and describes, well, a trainload of rolling stock -- boxcars, flatcars, hoppers, gondolas, tank cars, auto-rack transports and others -- representing a variety of railways in action around the nation. Engines may provide the power and cabooses the sentimental value, but without that which comes in between, both are moot.
