Historical Corpora Jost Gehrke, Ralf Gippert,2015-03-01 The volume contains 23 papers read at the international conference Historical Corpora 2012, which was hosted by the LOEWE Research Cluster Digital Humanities of the State of Hesse at the University of Frankfurt on December 6-8, 2012. The papers, which include three keynote speeches, have been duly updated for the present volume. The contributions take a broad variety of perspectives on historical corpora, including their structuring, their management, and various other facets. In addition to this, they cover a large amount of different languages, extending from German - in nearly all its historical facets - across the Romance languages into the Caucasus and from the recent past down into antiquity. Differences also concern the linguistic interests prevailing in the papers, which may focus on syntactic, semantic, pragmatic, lexicological or other phenomena.

Translator's Workbench Marianne Kugler,Khurshid Ahmad,Gregor Thurmair,2013-11-09 The Translator's Workbench Project was a European Community sponsored research and development project which dealt with issues in multi-lingual communication and documentation. This book presents an integrated toolset as a solution to problems in translation and documentation. Professional translators and teachers of translation were involved in the process of software development, starting with a detailed study of the user requirements and ending with several evaluation-and-improvement cycles of the resulting toolset. English, German, Greek, and Spanish are addressed in the contributions, however, some of the techniques are inherently language-independent and can thus be extended to cover other languages as well. Translation can be viewed broadly as the execution of three cognitive processes, and this book has

been structured along these lines: • First, the translation pre-process, understanding the target language text at a lexico semantic level on the one hand, and making sense of the source language document on the other hand. The tools for the pre-translation process include access to electronic networks, conversion of documents from one format to another, creation of terminology data banks and access to existing data banks, and terminology dictionaries. • Second, the translation process, rendering sentences in the source language into equivalent target sentences. The translation process refers to the potential of conventional machine translation systems, like METAL, and of the statistically oriented translation memory.

Using Online Dictionaries Carolin Müller-Spitzer, 2014-02-27 Until now, there has been very little research into the use of online dictionaries. In contrast, the market for online dictionaries is increasing both for academic lexicography and for commercial lexicography, with sales figures for printed reference works in continual decline. This has led to a demand for reliable empirical information on how online dictionaries are actually being used and how they could be made more user-friendly. The volume *Using Online Dictionaries* makes a substantial contribution to closing this research gap. It is divided into four parts: The first part contains articles on fundamental issues: a research review of the empirical studies on digital dictionaries which have already been carried out, and a brief methodological guideline for lexicographical researchers who are interested in conducting their own empirical research. The second part contains the results of two studies that focus on general questions about the use of online dictionaries. It presents empirical data on contexts of dictionary use, on expectations and demands regarding online dictionaries. Furthermore, innovative features, such as the use of multimedia elements or the option of a user-adaptive interface and questions of design were assessed empirically. The third part of this volume comprises more specific studies of online dictionaries: an eye-tracking study evaluating the new web design of the dictionary portal OWID and a log file study which tries to get to the bottom of the following question: Do dictionary users look up frequent words, or put differently, is there a connection between how often a word is looked up and how often it appears in a corpus? In the last chapter of this thematic section, the question of how users judge the combination of a written paraphrase and an additional illustration in illustrated online dictionaries is addressed. The last part focuses on the use of monolingual dictionaries, in particular the German online dictionary *lexiko*. In this context, two online questionnaire-based studies were carried out. The empirical studies were conducted in the form of online surveys combining questionnaires and experimental elements and in the form of laboratory studies using eye-tracking technology as well as using observational methods such as log file analyses. Regarding the comprehensive research framework, this volume can be relevant to lexicographers, metalexicographers and linguists who are interested in the use of (online) dictionaries and in the development and exploration of lexicographical data for the internet, as well as linguists interested in empirical methods. It addresses a broad expert audience by presenting an academic subject which is currently the focus of much discussion.
