Christopher Knight, Alan Butler

History of the Colony of New Haven Edward Rodolphus Lambert,1838

The Formations of Modernity Bram Gieben, Stuart Hall, 1993-01-04 Formations of Modernity is a major introductory textbook offering an account of the important historical processes, institutions and ideas that have shaped the development of modern societies. This challenging and innovative book 'maps' the evolution of those distinctive forms of political, economic, social and cultural life which characterize modern societies, from their origins in early modern Europe to the nineteenth century. It examines the roots of modern knowledge and the birth of the social sciences in the Enlightenment, and analyses the impact on the emerging identity of 'the West' of its encounters through exploration, trade, conquest and colonization, with 'other civilizations'. Designed as an introduction to modern societies and modern sociological analyses, this book is of value to students on a wide variety of social science courses in universities and colleges and also to readers with no prior knowledge of sociology. Selected readings from a broad range of classical writers (Weber, Durkheim, Marx, Freud, Adam Smith, Montesquieu, Hobbes, Locke, Rousseau) and contemporary thinkers (Michael Mann, E.P. Thompson, Edward Said) are integrated in each chapter, together with student questions and exercises.

The Elements of Non-Euclidean Geometry Julian Lowell Coolidge, 1909

Foods of Association Nina Lilian Etkin, 2009 "We should look for someone to eat and drink with before looking for something to eat and drink." — Epicurus This fascinating book examines the biology and culture of foods and beverages that are consumed in communal settings, with special attention to their health implications. Nina Etkin covers a wealth of topics, exploring human evolutionary history, the Slow Food movement, ritual and ceremonial foods, caffeinated beverages, spices, the street foods of Hawaii and northern Nigeria, and even bottled water. Her work is framed by a biocultural perspective that considers both the physiological implications of consumption and the cultural construction and circulation of foods. For Etkin, the foods and beverages we consume are simultaneously biodynamic substances and cultural objects. The book begins with a look at the social eating habits of our primate relatives and discusses our evolutionary adaptations. It then offers a history of social foods in the era of European expansion, with a focus on spices and caffeinated cordials. (Of course, there were some powerful physiological consequences of eating foods brought home by returning explorers, and those are considered too — along with consequences for native peoples.) From there, the book describes street food, which is always served in communal settings. Etkin then scrutinizes ceremonial foods and beverages, and considers their pharmacological effects as well. Her extensive examination concludes by assessing the biological and cultural implications of bottled water. While intended primarily for scholars, this enticing book

serves up a tantalizing smorgasbord of food for thought.

Stroke Genetics Hugh S. Markus, 2003 Stroke is a major cause of death and the major cause of adult neurological disability in most of the world. Despite its importance on a population basis, research into the genetics of stroke has lagged behind that of many other disorders. However, the situation is now changing. An increasing number of single gene disorders causing stroke are being described, and there is growing evidence that polygenic factors are important in the risk of apparently sporadic stroke. Stroke Genetics provides an up-to-date review of the area, suitable for clinicians treating stroke patients, and both clinical and non-clinical researchers in the field of cerebrovascular disease. The full range of monogenic stroke disorders causing cerebrovascular disease, including ischaemic stroke, intracerebral haemorrhage, aneurysms and arteriovenous malformations, are covered. For each, clinical features, diagnosis, and genetics are described. Increasing evidence suggests that genetic factors are also important for the much more common multifactorial stroke; this evidence is reviewed along with the results of genetic studies in this area. Optimal and

novel strategies for investigating multifactorial stroke, including the use of intermediate phenotypes such as intima-media thickness and MRI detected small vessel disease are reviewed. The book concludes by describing a practical approach to investigating patients with stroke for underlying genetic disorders. Also included is a list of useful websites.

Civilization One: The World is Not as You Thought it Was Christopher Knight, Alan

Butler,2014-01-30 ...one of the biggest breakthroughs of all times... this is the definitive proof that civilisation is thousands of years older than historians believe' -Colin Wilson 'A breakthrough book. The last four thousand years are never going to be the same again' - Graham Hancock This is the amazing story of how a quest to try to crack the mystery of the Megalithic Yard - an ancient unit of linear measurement - led to the discovery of compelling evidence pointing to the existence of an unknown, highly advanced culture which was the precursor to the earliest known civilizations such as the Sumerians and the Egyptians. There must have been a Civilization One. Knight and Butler reveal the secrets of an extraordinary integrated measuring system which might have been lost to the world for

ever. It was a system, far more advanced than anything used today, which forms the basis of both the Imperial and Metric measure systems! These ancient scientists understood the dimensions, motions and relationships of the Earth, Moon and Sun - they measured the solar system and even understood how the speed of light was integrated into the movements of our planet. Their conclusions fly in the face of everything that we thought we knew about the origins of the modern world - but the evidence is incontrovertible. And the implications of these revelations go far beyond the fascination of the discovery of a 'super-science' of prehistory; they indicate a grand plan which will have far reaching theological ramifications!

Task Design In Mathematics Education Anne Watson, Minoru Ohtani, 2015-10-26

THIS BOOK IS AVAILABLE AS OPEN ACCESS BOOK ON SPRINGERLINK This open access book is the product of ICMI Study 22 Task Design in Mathematics Education. The study offers a state-of-the-art summary of relevant research and goes beyond that to develop

new insights and new areas of knowledge and study about task design. The authors represent a wide range of countries and cultures and are leading researchers, teachers and designers. In particular, the authors develop explicit understandings of the opportunities and difficulties involved in designing and implementing tasks and of the interfaces between the teaching, researching and designing roles – recognising that these might be undertaken by the same person or by completely separate teams. Tasks generate the activity through which learners meet mathematical concepts, ideas, strategies and learn to use and develop mathematical thinking and modes of enquiry. Teaching includes the selection, modification, design, sequencing, installation, observation and evaluation of tasks. The book illustrates how task design is core to effective teaching, whether the task is a complex, extended, investigation or a small part of a lesson; whether it is part of a curriculum system, such as a textbook, or promotes free standing activity; whether the task comes from published source or is devised by the teacher or the student.

Late Effects of Childhood Cancer Daniel Green, Hamish Wallace, 2003-12-26 The treatment of childhood cancer has become increasingly successful over the last forty years, and during the last two decades in particular, and the overall cure rate is now 60-70%. This, in turn, has introduced new issues for the clinician as the number of long-term survivors has increased. Some of the therapies that have contributed most to the improvement in survival are now known to have serious consequences for the patient in later life, and many survivors will be affected by physical, educational and psychological disability to a lesser or greater degree. This definitive reference brings together all aspects of long-term effects of treatment for cancer during childhood in a single comprehensive volume. International in

perspective, the book is structured according to complication rather than original site of malignancy for ease of reference. Topics covered include problems in the neurological system and special senses of sight and sound, cardiovascular, respiratory, gastrointestinal, urological and musculoskeletal complications, effects on the endocrine system and, in particular, future fertility, and secondary cancers. The book also reviews in detail the important issues of quality of life, prevention initiatives and strategies for long-term follow up. Key point summaries are included throughout, and the references are annotated to guide the reader quickly to seminal primary papers and key review articles. With an accessible and consistent approach throughout, Late Effects of Childhood Cancer is an invaluable source of information and guidance for pediatric oncologists, who need to keep fully informed in order to advise patients and their parents appropriately, and also for pediatric and adult endocrinologists, adult oncologists and other physicians to whom the patient with late effects may initially present.
