**Handbook of Data Structures and Applications** Dinesh P. Mehta,Sartaj Sahni,2004-10-28 Although there are many advanced and specialized texts and handbooks on algorithms, until now there was no book that focused exclusively on the wide variety of data structures that have been reported in the literature. The Handbook of Data Structures and Applications responds to the needs of students, professionals, and researchers who need a mainstream reference on data structures by providing a comprehensive survey of data structures of various types. Divided into seven parts, the text begins with a review of introductory material, followed by a discussion of well-known classes of data structures, Priority Queues, Dictionary Structures, and Multidimensional structures. The editors next analyze miscellaneous data structures, which are well-known structures that elude easy classification. The book then addresses mechanisms and tools that were developed to facilitate the use of data structures in real programs. It concludes with an examination of the applications of data structures. The Handbook is invaluable in suggesting new ideas for research in data structures, and for revealing application contexts in which they can be deployed. Practitioners devising algorithms will gain insight into organizing data, allowing them to solve algorithmic problems more efficiently.

Comparative Evaluation of XML Information Retrieval Systems Norbert Fuhr,Mounia Lalmas,Andrew Trotman,2007-08-19 This book constitutes the thoroughly refereed post-proceedings of the 5th International Workshop of the Initiative for the Evaluation of XML

Retrieval, INEX 2006, held at Dagstuhl Castle, Germany, in December 2006. The papers are organized in topical sections on methodology and seven additional tracks on ad-hoc, natural language processing, heterogeneous collection, multimedia, interactive, use case, as well as document mining.

**The Handbook of Financial Communication and Investor Relations** Alexander V. Laskin, 2017-09-07 The first book to offer a global look at the state-of-the-art thinking and practice in investor relations and financial communication Featuring contributions from leading scholars and practitioners in financial communication and related fields—including public relations, corporate communications, finance, and accounting— this volume in the critically acclaimed “Handbooks in Communication and Media” series provides readers with a comprehensive, up-to-date picture of investor relations and financial communications as they are practiced in North America and around the world. The Handbook of Financial Communication and Investor Relations provides an overview of the past, present, and future of investor relations and financial communications as a profession. It identifies the central issues of contemporary investor relations and financial communications practice, including financial information versus non-financial information, intangibles, risk, value, and growth. Authors address key topics of concern to contemporary practitioners, such as socially responsible investing, corporate governance, shareholder activism, ethics, and professionalism. In addition, the book arms readers with metrics and proven techniques for reliably measuring and evaluating the effectiveness of investor relations and financial communications. Bringing together the most up-to-date research on investor relations and financial communication and the insights and expertise

of an all-star team of practitioners, *The Handbook of Financial Communication and Investor Relations*: Explores how the profession is practiced in various regions of the globe, including North America, South America, Europe, the Middle East, India, Australia, and other areas Provides a unique look at financial communication as it is practiced beyond the corporate world, including in families, the medical profession, government, and the not-for-profit sector Addresses “big-picture” strategies as well as specific tactics for financial communication during crises, the use of social media, dealing with shareholder activism, integrated reporting and CSR, and more This book makes an ideal reference resource for undergrads and graduate students, scholars, and practitioners studying or researching investor relations and financial communication across schools of communication, journalism, business, and management. It also offers professionals an up-to-date, uniquely holistic look at best practices in financial communication investor relations worldwide.

**Metaphor and Cognition** B. Indurkha, 2013-03-09 Many metaphors go beyond pointing to the existing similarities between two objects -- they create the similarities. Such metaphors, which have been relegated to the back seat in most of the cognitive science research, are the focus of attention in this study, which addresses the creation of similarity within an elaborately laid out interactive framework of cognition. Starting from the constructivist views of Nelson Goodman and Jean Piaget, this framework resolves an apparent paradox in interactionism: how can reality not have a mind-independent ontology and structure, but still manage to constrain the possible worlds a cognitive agent can create in it? A comprehensive theory of metaphor is proposed in this framework that

explains how metaphors can create similarities, and why such metaphors are an invaluable asset to cognition. The framework is then applied to related issues of analogical reasoning, induction, and computational modeling of creative metaphors.

*Algorithmic Game Theory* Panagiotis Kanellopoulos, Maria Kyropoulou, Alexandros Voudouris, 2022-09-13 This book constitutes the proceedings of the 15th International Symposium on Algorithmic Game Theory, SAGT 2022, which took place in Colchester, UK, in September 2022. The 31 full papers included in this book were carefully reviewed and selected from 83 submissions. They were organized in topical sections as follows: Auctions, markets and mechanism design; computational aspects in games; congestion and network creation games; data sharing and learning; social choice and stable matchings.

**Recall of MPs** Great Britain. Parliament. House of Commons. Political and Constitutional Reform Committee, House of Commons, 2012-06-28 The Government published a draft Bill on the Recall of MPs, with the aim of restoring faith in the political process after the expenses scandal. But the restricted form of recall proposed could reduce public confidence in politics by creating expectations that are not fulfilled. Under the Government's proposals, constituents themselves would not be able to initiate a recall petition. Furthermore, the circumstances that the Government proposes would trigger a recall petition are so narrow that recall petitions would seldom, if ever, take place. The Committee believes that the new House of Commons Committee on Standards, which will include lay members, already has the sanctions it needs to deal with MPs who are guilty of misconduct, including recommending the ultimate sanction of expulsion from the House of

Commons in cases of serious wrongdoing. The Committee argues that the option of expulsion must be actively considered and that the House must be prepared to act. The Committee recommends: that the Government replace the requirement for a single designated location for signing the recall petition with a requirement for multiple locations; that people with an existing postal vote should automatically be sent a postal signature sheet in the event of a recall petition; that constituents in Northern Ireland should have the same options for signing a recall petition as constituents elsewhere in the UK, rather than being restricted to signing by post

**Combinatorics of Genome Rearrangements** Guillaume Fertin, 2009 A comprehensive survey of a rapidly expanding field of combinatorial optimization, mathematically oriented but offering biological explanations when required. From one cell to another, from one individual to another, and from one species to another, the content of DNA molecules is often similar. The organization of these molecules, however, differs dramatically, and the mutations that affect this organization are known as genome rearrangements. Combinatorial methods are used to reconstruct putative rearrangement scenarios in order to explain the evolutionary history of a set of species, often formalizing the evolutionary events that can explain the multiple combinations of observed genomes as combinatorial optimization problems. This book offers the first comprehensive survey of this rapidly expanding application of combinatorial optimization. It can be used as a reference for experienced researchers or as an introductory text for a broader audience. Genome rearrangement problems have proved so interesting from a combinatorial point of view that the field now belongs as much to mathematics as to biology. This book takes a

mathematically oriented approach, but provides biological background when necessary. It presents a series of models, beginning with the simplest (which is progressively extended by dropping restrictions), each constructing a genome rearrangement problem. The book also discusses an important generalization of the basic problem known as the median problem, surveys attempts to reconstruct the relationships between genomes with phylogenetic trees, and offers a collection of summaries and appendixes with useful additional information.

**Multi-source, Multilingual Information Extraction and Summarization** Thierry Poibeau, Horacio Saggion, Jakub Piskorski, Roman Yangarber, 2012-08-14 Information extraction (IE) and text summarization (TS) are powerful technologies for finding relevant pieces of information in text and presenting them to the user in condensed form. The ongoing information explosion makes IE and TS critical for successful functioning within the information society. These technologies face particular challenges due to the inherent multi-source nature of the information explosion. The technologies must now handle not isolated texts or individual narratives, but rather large-scale repositories and streams---in general, in multiple languages---containing a multiplicity of perspectives, opinions, or commentaries on particular topics, entities or events. There is thus a need to adapt existing techniques and develop new ones to deal with these challenges. This volume contains a selection of papers that present a variety of methodologies for content identification and extraction, as well as for content fusion and regeneration. The chapters cover various aspects of the challenges, depending on the nature of the information sought---names vs. events,--- and the nature of the sources---news streams vs. image

captions vs. scientific research papers, etc. This volume aims to offer a broad and representative sample of studies from this very active research field.

*Stable Probability Measures on Euclidean Spaces and on Locally Compact Groups*  
Wilfried Hazod, Eberhard Siebert, 2013-03-14

Generalising classical concepts of probability theory, the investigation of operator (semi)-stable laws as possible limit distributions of operator-normalized sums of i.i.d. random variable on finite-dimensional vector space started in 1969. Currently, this theory is still in progress and promises interesting applications. Parallel to this, similar stability concepts for probabilities on groups were developed during recent decades. It turns out that the existence of suitable limit distributions has a strong impact on the structure of both the normalizing automorphisms and the underlying group. Indeed, investigations in limit laws led to contractable groups and - at least within the class of connected groups - to homogeneous groups, in particular to groups that are topologically isomorphic to a vector space. Moreover, it has been shown that (semi)-stable measures on groups have a vector space counterpart and vice versa. The purpose of this book is to describe the structure of limit laws and the limit behaviour of normalized i.i.d. random variables on groups and on finite-dimensional vector spaces from a common point of view. This will also shed a new light on the classical situation. Chapter 1 provides an introduction to stability problems on vector spaces. Chapter II is concerned with parallel investigations for homogeneous groups and in Chapter III the situation beyond homogeneous Lie groups is treated. Throughout, emphasis is laid on the description of features common to the group- and vector space situation. Chapter I can be understood by graduate students with some background knowledge in infinite divisibility.

Readers of Chapters II and III are assumed to be familiar with basic techniques from probability theory on locally compact groups.

**Metaphor in Use** Fiona MacArthur, José Luis Oncins-Martínez, Manuel Sánchez-García, Ana María Piquer-Píriz, 2012-10-17 Metaphor is a fascinating phenomenon, but it is also complex and multi-faceted, varying in how it is manifested in different modes of expression, languages, cultures, or time-scales. How then can we reliably identify metaphors in different contexts? How does the language or culture of speakers and hearers affect the way metaphors are produced or interpreted? Are the methods employed to explore metaphors in one context applicable in others? The sixteen chapters that make up this volume offer not only detailed studies of the situated use of metaphor in language, gesture, and visuals around the world – providing important insights into the different factors that produce variation – but also careful explication and discussion of the methodological issues that arise when researchers approach metaphor in diverse ‘real world’ contexts. The book constitutes an important contribution to applied metaphor studies, and will prove an invaluable resource for the novice and experienced metaphor researcher alike.

**The Discrepancy Method** Bernard Chazelle, 2000 The discrepancy method is the glue that binds randomness and complexity. It is the bridge between randomized computation and discrepancy theory, the area of mathematics concerned with irregularities in distributions. The discrepancy method has played a major role in complexity theory; in particular, it has caused a mini-revolution of sorts in computational geometry. This book tells the story of the discrepancy method in a few short independent vignettes. It is a

varied tale which includes such topics as communication complexity, pseudo-randomness, rapidly mixing Markov chains, points on the sphere and modular forms, derandomization, convex hulls, Voronoi diagrams, linear programming and extensions, geometric sampling, VC-dimension theory, minimum spanning trees, linear circuit complexity, and multidimensional searching. The mathematical treatment is thorough and self-contained. In particular, background material in discrepancy theory is supplied as needed. Thus the book should appeal to students and researchers in computer science, operations research, pure and applied mathematics, and engineering.
