Euro-Par 2009, Parallel Processing – Workshops Hai-Xiang Lin, Michael Alexander, Martti

Forsell, Andreas Knüpfer, Radu Prodan, Leonel Sousa, Achim Streit, 2010-06-17 This book constitutes the workshops of the 15th International Conference on Parallel Computing, Euro-Par 2009, held in Delft, The Netherlands, in August 2009. These focus on advanced specialized topics in parallel and distributed computing and reflect new scientific and technological developments.

Future Generation Grids Vladimir Getov, Domenico Laforenza, Alexander Reinefeld, 2006-10-12 The

CoreGRID Network of Excellence (NoE) project began in September 2004. Two months later, in November 2004, the first CoreGRID Integration Workshop was held within the framework of the prestigious international Dagstuhl seminars. CoreGRID aims at strengthening and advancing long-term research, knowledge transfer and integration in the area of Grid and Peer-to-Peer technologies. CoreGRID is a Network of Excellence - a new type of project within the European 6th Framework Programme, to ensure progressive evolution and durable integration of the European Grid research

community. To achieve this objective, CoreGRID brings together a critical mass of well-established researchers and doctoral students from forty-two institutions that have constructed an ambitious joint programme of activities. Although excellence is a goal to which CoreGRID is committed, durable integration is our main concern. It means that CoreGRID has to carry out activities to improve the effectiveness of European research in Grid by coordinating and adapting the participants' activities in Grid research, to share resources such as Grid testbeds, to encourage exchange of research staff and students, and to ensure close collaboration and wide dissemination of its results to the international community. Organising CoreGRID Integration Workshops is one of the activities that aims at identifying and promoting durable collaboration between partners involved in the network.

Workflows for e-Science Ian J. Taylor,Ewa Deelman,Dennis B. Gannon,Matthew

Shields,2007-12-31 This is a timely book presenting an overview of the current state-of-the-art within established projects, presenting many different aspects of workflow from users to tool builders. It provides an overview of active research, from a number of different perspectives. It includes theoretical aspects of workflow and deals with workflow for e-Science as opposed to e-Commerce. The topics covered will be of interest to a wide range of practitioners.

Curse of the Narrows Laura M. Mac Donald, 2009-05-26 In 1917, the port of Halifax, Nova Scotia, was crowded with ships leaving for war-torn Europe. On December 6th, two of them—the Mont Blanc and the Imo—collided in the Narrows, a hard-to-navigate stretch of the harbor. Ablaze, and with explosions on her deck filling the sky, the Mont Blanc grounded against the city's docks. As thousands rushed to their windows and into the streets to watch, she exploded with such force that the 3,121 tons of her iron hull vaporized in a cloud that shot up more than 2,000 feet; the explosion was so unusual that Robert Oppenheimer would study its effects to predict the devastation of an atomic bomb. The blast caused a giant wave that swept over parts of the city, followed by a slick, black rain that fell for ten minutes. Much of the city was flattened, and not one in 12,000 buildings within a 16-mile radius left undamaged. More than 1,600 Halifaxians were killed and 6,000 injured; and within twenty-four hours, a blizzard had isolated Halifax from the world. Set vividly against the background of World War I, *Curse of the Narrows* is the first major account of the world's largest pre-atomic explosion, the epic relief mission from Boston, and the riveting trial of the Mont Blanc's captain and pilot. Laura M. Mac

Donald is as adept at describing the dynamics of a chain reaction explosion as she is at chronicling unforgettable human dramas of miraculous survival, unfathomable loss, and the medical breakthroughs in pediatrics and eye surgery that followed the disaster . Using primary sources--many of which haven't been read in decades and--with a wonderful feel for narrative history, Mac Donald chronicles one of the most compelling and dramatic events of the 20th century.

Program Development in Computational Logic Maurice Bruynooghe,Kung-Kiu Lau,2004-06-17 1

The tenth anniversary of the LOPSTR symposium provided the incentive for this volume. LOPSTR started in 1991 as a workshop on logic program synthesis and transformation, but later it broadened its scope to logic-based program development in general, that is, program development in computational logic, and hence the title of this volume. The motivating force behind LOPSTR has been the belief that declarative paradigms such as logic programming are better suited to program development tasks than traditional non-declarative ones such as the imperative paradigm. Specification, synthesis, transformation or specialization, analysis, debugging and verification can all be given logical foundations, thus providing a unifying framework for the whole development process. In the past 10 years or so, such a theoretical framework has indeed begun to emerge. Even tools have been implemented for analysis, verification and specification.

However, it is fair to say that so far the focus has largely been on programming-in-the-small. So the future challenge is to apply or extend these techniques to programming-in-the-large, in order to tackle software engineering in the real world. Returning to this volume, our aim is to present a collection of

papers that reflect significant research efforts over the past 10 years. These papers cover the whole development process: specification, synthesis, analysis, transformation and specialization, as well as semantics and systems.

Distributed and Parallel Systems Peter Kacsuk,Robert Lovas,Zsolt Nemeth,2008-08-07 DAPSYS

(International Conference on Distributed and Parallel Systems) is an international biannual conference series dedicated to all aspects of distributed and parallel computing. DAPSYS 2008, the 7th International Conference on Distributed and Parallel Systems was held in September 2008 in Hungary. Distributed and Parallel Systems: Desktop Grid Computing, based on DAPSYS 2008, presents original research, novel concepts and methods, and outstanding results. Contributors investigate parallel and

distributed techniques, algorithms, models and applications; present innovative software tools, environments and middleware; focus on various aspects of grid computing; and introduce novel methods for development, deployment, testing and evaluation. This volume features a special focus on desktop grid computing as well. Designed for a professional audience composed of practitioners and researchers in industry, this book is also suitable for advanced-level students in computer science.

The Enigmatic Realm of **G A T Engine**: Unleashing the Language is Inner Magic

In a fast-paced digital era where connections and knowledge intertwine, the enigmatic realm of language reveals its inherent magic. Its capacity to stir emotions, ignite contemplation, and catalyze profound transformations is nothing in short supply of extraordinary.
