Decoding the Message of the Pulsars Paul A. LaViolette,2006-04-21 Paul LaViolette's 25 years of research into the precisely timed radio pulses from extraterrestrial sources known as pulsars shows that they are distributed in the sky in a nonrandom fashion, often marking key galactic locations, and that their signals are of intelligent origin, warning about a past galactic core explosion that could recur in the near future.

The Starfleet Messages Catherine Richardson,2010-05-11 What are the choices that free us? What would it mean to live adventurously, beyond depression and fear? How can we rise beyond ourselves to embrace the God within us? Channeled in plain and inspiring words from a group of beings known as the Galactic Frequency Council, *The Starfleet Messages: A Galactic Guide to Spiritual Expansion* is more than a toolkit for spiritual expansion – it is an invitation to join in the great work of creating the world we live in.

Decoding the Message of the Pulsars Paul A. LaViolette,2006-04-21 A new interpretation of nearly 40 years of interstellar signals and the prophetic message they contain • Contains extensive analysis of pulsar data, revealing new ideas about the origins and functions of pulsars • Provides proof of an extraterrestrial communication network • Includes information about the formation of crop circles and force-field-beaming technology In 1967, astronomers began receiving and cataloging precisely timed radio pulses from extraterrestrial sources, which they called pulsars. These pulsars emit laserlike radio beams that penetrate through space much like searchlight beams. Paul LaViolette, who has been researching pulsars for over 25 years, shows that while these pulsars have long been assumed to be spinning stars, the true nature of these radio sources has been grossly misunderstood. In *Decoding the Message of the Pulsars*, LaViolette shows that pulsars are distributed in the sky in a nonrandom fashion, often marking key galactic locations, and that their signals are of intelligent origin. Using extensive scientific data to corroborate his theory, he presents evidence of unusual geometric alignments among pulsars and intriguing pulse-period relationships. Equally compelling is the message LaViolette contends is being sent by these extraterrestrial beacons: a warning about a past galactic core explosion disaster that could recur in the near future.

How to Speak Wookiee Wu Kee Smith,2011-08-31 Everyone's been there you're playing holo chess with a Wookiee, and things get out of hand. You've done something to offend him, but you don't know what. How can you defuse the situation? Better yet, how can you make sure you never end up there again? With intergalactic travel easier than ever, Wookiees can now be found on nearly every planet in the galaxy and on starships everywhere in between. This helpful guide teaches citizens of the galaxy key phrases in the Wookiee language, eliminating near-fatal encounters with notoriously short-tempered Wookiees while smoothing the way to lasting partnerships and friendships. The handy sound module recorded by Chewbacca himself! demonstrates proper pronunciation of ten key phrases.

Satellite Communication Systems Design S. Tirró,1993-06-30 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up-to-date information on international recommendations, system architectures, and equipment standards. It is therefore necessary to involve many authors, each possessing a good level of knowledge in a particular discipline. The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems, without any major reference to other textbooks specializing in particular disciplines. The obvious consequence of this approach has been the large size of the book, with the advantages, however, of practically complete independence from other books, more systematic discussion of the subject matter, and better readability. After the required background information, emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems. The book may be divided in five parts as follows: • The first five chapters provide most of the required background information. • Chapter 6 is an introductory outline of satellite communication systems. • Chapters 7 to 13 deal with the various aspects of technical system design. • Chapter 14 discusses system economics. • Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications.

Communication with Extraterrestrial Intelligence John Billingham,Rudolf Pešek,2013-10-22 Communication with Extraterrestrial Intelligence is devoted to the concepts and studies related to the science, technology, and observational techniques of communication with extraterrestrial intelligence (CETI). Topics covered range from the search for extraterrestrial intelligence (SETI) to the theory of interstellar communication; the problem of the origin of life; radio signals from extraterrestrial civilizations; and interstellar communication by neutrino beams. An infinitely expandable space radiotelescope is also described. This book is comprised of 21 chapters and opens with a discussion on the CETI activities of the International Academy of Astronautics (IAA) from 1965 to 1976 and describes the outlook for the IAA CETI Standing Committee. The following chapters sketch the background and rationale for a SETI program; the significance of the detection of signals and of information that may be contained in signals from extraterrestrial civilizations; an extended Drake's equation, the longevity-separation relation, equilibrium, inhomogeneities, and chain formation; and the physical and psychological basis for the belief that a band of frequencies called the water hole is a prime band for SETI. This monograph will appeal to practitioners in the fields of astrophysics, astronomy, planetary formation, exobiology, and biological evolution.

Low Frequency Radio Astronomy and the LOFAR Observatory George Heald,John McKean,Roberto Pizzo,2018-10-11 This book presents lecture materials from the Third LOFAR Data School, transformed into a coherent and complete reference book describing the LOFAR design, along with descriptions of primary science cases, data processing techniques, and recipes for data handling. Together with hands-on exercises the chapters, based on the lecture notes, teach fundamentals and practical knowledge. LOFAR is a new and innovative radio telescope operating at low radio frequencies (10-250 MHz) and is the first of a new generation of radio interferometers that are leading the way to the ambitious Square Kilometre Array (SKA) to be built in the next decade. This unique reference guide serves as a primary information source for research groups around the world that seek to make the most of LOFAR data, as well as those who will push these topics forward to the next level with the design, construction, and realization of the SKA. This book will also be useful as supplementary reading material for any astrophysics overview or astrophysical techniques course, particularly those geared towards radio astronomy (and radio astronomy techniques).

Communications Standard Dictionary Martin H. Weik,2012-12-06 Communications * Standard Dictionary is a comprehensive

compilation of terms and definitions used in communications and related fields. Communications is defined as the branch of science and technology concerned with the process of representing, transferring, and interpreting the meaning as signed to data by and among persons, places, or machines. Communication is defined as the transfer of information between a source (transmitter, light source) and a sink (receiver, photodetector) over one or more channels in accordance with a protocol, and in a manner suitable for interpretation or comprehension by the receiver; or as a method or means of conveying information of any kind from one person or place to another. In short, communications is a branch of science and technology, whereas communication pertains to the actual transfer of information. Thus, the word communication should be used as a modifier, as in communication center, communication deception, and communication line, just as in the field of electronics one speaks of electronic devices and electronic circuits.

The Thogchag Vigil Pritam Vachani, 2019-09-28 THE THOGCHAG VIGIL is set in a futuristic scenario, and deals with Artificial Intelligence (AI) where it is possible to control and manipulate the minds of others. Following an intense 200 year galactic war those, that survive, use this AI to create a New World Order where the Code of Conduct, amongst other stipulations, strictly bars and punishes homosexuality. It is in an age where organ replacement has reached such sophisticated levels that persons can live up to several hundred years. In addition, almost all activities are being done by robots. Long lives with very little work leads to extreme permissiveness. On the other hand, there is a Group that believes in Buddhism and traditional family values, and gradually increases its influence to negate or neutralise the hedonistic aspects of those in power. Buddhist Thogchags are medallions made from meteorites that magically descended on Earth centuries back. Their fostering of justice and catalytic influence for righteous change makes fascinating reading.

A Model of Creation Hans J. Zeunert, 2012-11-01 This paperback, just as we have with both issues of the Unified Mind Theory is identical to the hardcover issue, only its binding is different. Two books provide for a greater platform to describe the same thing. One looks great on the shelf, while the less fancy copy may attract the prudent student. Enlightenment for 20 bucks! A Model of Creation shows us a new way to look at Creation, the universe and the formation of life. We are liberated from a narrow, 4-dimensional view of the world with its assumption of bigbang and antimatter as the foundation to its evolution. We are lifted to a clearer vision where mass is recycled on a continuous basis and therefore by definition not real. What is not now does not exist since reality does not change! Creation is real. It is recessional velocity which drives and shapes the universe.

Ancient Designs Richard Hage, 2004-02-18 Jareth Sykr, President and technical lead of Sykr Corp, is a lone technological visionary in a galaxy of technological stagnation and industrial ruin. The Society for Ethical Development, led by anti-technology zealots since its inception following the past great galactic war, has ensured that the galactic infrastructure and will to conceive and implement technology has been lost to the past. Jareth Sykr has forsaken the ways of the Society and seeks to recover and understand lost ancient technology. He and his team of archeo-technologists and engineers uncover lost technologies from across the span of ages and space. Galactic clients increasingly see the benefits of his recovered and re-engineered technologies, and Sykr Corp grows as an increasing threat to the power of the Society. Society supported assassins and mercenaries seek to destroy Jareth and his corporation before they can further corrupt the galaxy. As the galaxy struggles with its stagnation, an overwhelming threat rains down upon it from across the extra-galactic void. A galactic emperor, unsatisfied with his domain, leads his armada of planet-ships to capture the ill-prepared galaxy, which is a realm he finds more to his liking.
