Representation of Disability in Children's Video Games Krystina Madej,2024-01-10 Representation of Disability in Children's Video Games looks at how children's engagement with characters and stories in video games helps create the perception of disability they have as teens and adults. Drawing on child development theory supported by neuroscience, the book shows how the scaffold of information, the schema, adults have of disability is first created at a very young age as they interact through game play with characters with disabilities. Positing that early video game play experiences should provide exposure to narrative schemas that add understanding and help create meaning about the disability represented, the book presents how such representation in children's video games maps against cognitive development, and the psychomotor and cognitive needs and abilities of children ages 3 to 12. Close reading of over 40 PEGI 3 and PEGI 7 (ESRB E, 10+) games and analysis of games as diverse as Backyard Baseball and Sly Cooper helped define broad categories of representation: representation can be cosmetic, providing exposure but not gameplay utility; it can be incidental, used as a device that provides purpose for the narrative; or it can more authentically represent the disability as integral to the character and their life. The book provides readers with an overview of contemporary games that betters their understanding of how children's games present disability and how children create their perceptions through interaction with characters and stories. This book will be of interest to academics and students of game studies, in particular topics such as behavioural science, ethics, and HCI, as well as sociology, communications, and digital media.

The Information Superhighway and Private Households Walter Brenner, Lutz Kolbe, 1996-01-30 Wolfgang Glatthaar International Business Machines (IBM), Gennany The rapid developments in information technology (IT) will continue through the coming years. New application areas will be added. Whereas the use of information technology in the past decade has been concentrated primarily on business and public administration, in future the suppliers of information technology will develop an increasing number of applications for the private household (see fig. 1). Traditional perspective: New perspective: 'IT-solutions for the company' private household ~ \ \ \ \ \ \\ \\ \\ Fig. 1. New perspective on information technology This development has already generated considerable market dynamics. Latest forecasts for the USA suggest that by 1996 at the latest the private household will present greater sales potential for home computers than business and public administration. VI Preface Up to now the use of information technology in the private household has not been regarded as highly significant by either business or science, even though PCs have become widespread in the private sphere. In the ESPRIT framework there have been individual projects dealing with home networks, and in a number of Asian and European countries, as well as America, experiments with interactive television are taking place. Internet and commercial online services are experiencing rapid growth. This application area for information technology in the private household, which is generating increasing business attention, must also be the subject of appropriate research activities.
