*Price Elasticities of Demand for Motor Gasoline and Other Petroleum Products* Terry H.

Morlan,1981 Research results for short-term and long-term petroleum elasticities are summarized, and existing Energy Information Administration (EIA) models of energy demand are used to develop estimates of price response for 1-, 3-, 5-, and 10-year intervals. In the short-run, elasticities reported for most petroleum products in most end-uses generally range from -.1 to -.4 although the numerous research estimates for gasoline demand elasticity are clustered in the more elastic range of -.1 to -.3. EIA models used in this analysis fall within these ranges and tend toward the higher (in absolute terms) end of the elasticity range. In transportation uses, for which most of the research has centered on gasoline, petroleum demand has been shown to be less responsive to price than the other sectors, with long-term gasoline estimates generally falling in the range of -.3 to -.9. In investigating the price sensitivity for periods up to 10 years using the EIA Demand Analysis System, petroleum product elasticities in all sectors are typically between -.4 and -.1. For automobile gasoline demand, the greatest proportion of the 10-year price response is manifested in increased cutbacks in travel. The model studies show that, given continued increases in the price of oil, the proportion of consumer budgets as well as industrial production costs allocated for petroleum products will increase; that petroleum prices will be volatile in instances of temporary oil shortages; and that market forces can achieve long-term conservation of petroleum, but at the cost of greater proportional increases in oil prices.

*Foundations of Natural Gas Price Formation* Sergei Komlev,2020-09-25 Natural gas pricing should be as critically important to the general public as it is to industry specialists. Pricing is the basis of balancing the interests of European and Asian consumers of power and electricity with those of the limited number of potential suppliers of natural gas. Given that natural gas is a foundational transition fuel source that will not be supplanted by renewals for many, many years, the consequences of market failure from incorrect pricing mechanisms could result in the industry missing the new investment cycle. In addressing the critical balancing role of natural gas pricing, 'Foundations of Natural Gas Price Formation' presents an in-depth analysis of the fundamentals of natural gas price formation and outlines the distinctive characteristics of natural gas that make it a unique commodity by examining the specific factors underpinning gas pricing that result in a hybrid pricing system special to natural gas. The book argues that the patrons of spot pricing through gas hubs are promoting an incorrect understanding of gas markets that will lead to market failure and to potential critical supply shortages in the near future. 'Foundations of Natural Gas Price Formation' defends the system of oil-indexed pricing as an accurate, market-based mechanism that has stood the test of time.

Urban China The World Bank;Development Research Center of the State Council,2014-07-29 In the last 30 years, China's record economic growth lifted half a billion people out of poverty, with rapid urbanization providing abundant labor, cheap land, and good infrastructure. While China has avoided some of the common ills of urbanization, strains are showing as inefficient land development leads to urban sprawl and ghost towns, pollution threatens people's health, and farmland and water resources are becoming scarce. With China's urban population projected to rise to about one billion – or close to 70 percent of the country's population – by 2030, China's leaders are seeking a more coordinated urbanization process. Urban China is a joint research report by a team from the World Bank and the Development Research Center of China's State Council which was established to address the challenges and opportunities of urbanization in China and to help China forge a new model of urbanization. The report takes as its point of departure the conviction that China's urbanization can become more efficient, inclusive, and sustainable. However, it stresses that achieving this vision will require strong support from both government and the markets for policy reforms in a number of area. The report proposes six main areas for reform: first, amending land management institutions to foster more efficient land use, denser cities, modernized agriculture, and more equitable wealth distribution; second, adjusting the hukou household registration system to increase labor mobility and provide urban migrant workers equal access to a common standard of public services; third, placing urban finances on a more sustainable footing while fostering financial discipline among local governments; fourth, improving urban planning to enhance connectivity and encourage scale and agglomeration economies; fifth, reducing environmental pressures through more efficient resource management; and sixth, improving governance at the local level.
