NASA Historical Staff (U.S.)

Human Spaceflight Joseph A. Angelo,2014-05-14 Presents an introduction to human space exploration, discussing the evolution of space technology that has allowed the human race to go from merely orbiting the Earth to landing on the Moon and living for months in a space station.

The Lost Gemini Clayton Wood,2019-10 The magical kingdom of Havenwood is everything a girl could want...except a girl like Bella. For while everyone else there loves painting dragons, fairies, pixies, and other such creatures of light, and bringing those paintings to life, Bella finds herself drawn to the darkness. To death and rot and the undead. Her best friend is an undead dragon called Nemesis, after all. She just doesn't fit in...and she knows it. So when Gideon offers to take Bella to a faraway city to meet Petrusa, the Queen of the Dead, Bella jumps at the opportunity. Petrusa wants her to become a Necromancer like Bella's mother...a master of the dark arts. But the Pentad gets to Bella first, arresting her for painting without a license. And the sentence for her crime is death! Now Bella must use her dark magic to escape the Pentad's clutches, and return to Havenwood. For an army of unspeakable horror threatens to descend on the magical kingdom, and if she doesn't stop them, the kingdom of light will be plunged into eternal darkness!

Gemini - Steps to the Moon Shayler David,2001-09-01 In Gemini - Steps to the Moon, David Shayler, the author, tells the story of the origin and development of the programme and the spacecraft from the perspective of the engineers, flight controllers and astronauts involved. It includes chapters on flight tests, Extra Vehicular Activity (EVA), rendezvous and docking, as well as information from NASA archives and personal interviews.

Vickers VC10 Lance Cole,2020-12-28 “A comprehensive history of the VC10 . . . enhanced by the fabulous artwork and photographs . . . will take you back to the golden age of jet travel.” —Flight Line Book Review Designed and manufactured by the men who would make Concorde, the Rolls-Royce powered Vickers VC10, and its larger variant, the Super VC10, represented the ultimate in 1960s subsonic airliners. The VC10 was Britain’s answer to the Boeing 707 and the Douglas DC-8, but it could take off in a very short distance, climb more steeply, and land at slower speed than its rivals. These were vital safety benefits in the early years of the jet age. At one stage, the Super VC10 was the biggest airliner made in Europe and the fastest in the world. On entry into service, both the VC10 and the longer Super VC10 carved out a niche with passengers who enjoyed the speed, silence and elegance of the airliner. Pilots, meanwhile, loved its ease of flying and extra power. Yet the VC10 project was embroiled in machinations across many years and more than one government. Questions were asked in parliament and the whole story was enmeshed in a political and corporate affair that signified the end of British big airliner production. Yet the men who made the VC10 also went on to design and build Concorde. Many VC10 pilots became Concorde pilots. In service until the 1980s with British Airways, and until 2013 with the RAF, the VC10 became a British icon and a national hero, one only eclipsed by Concorde. It retains a place in the hearts and minds of enthusiasts the world over. “A good one-stop reference to the VC10.” —Scale Aviation Modeller International

Apollo 12 - On the Ocean of Storms David M. Harland,2011-02-26 In July 1969 the ‘amiable strangers’ that made up the crew of the historic Apollo 11 flight successfully achieved the first manned lunar landing. Several months later, three close friends set off on an even more challenging mission. Free of the burden of making history, the Apollo 12 astronauts were determined to really enjoy their experience while taking care of business. This is the story of their mission, told largely in their own words. Their exploits and accomplishments showed how conservative the inaugural mission had been. With its two moonwalks, deployment of the first geophysical station on the Moon, and geological sampling, Apollo 12 did what many had hoped would be achieved by the first men to land on the Moon. The Apollo 12 mission also spectacularly demonstrated the precision landing capability required for success in future lunar surface explorations. In addition to official documents, published prior to and after the mission, APOLLO 12 - ON THE OCEAN OF STORMS draws on the flight transcript and post-mission debriefing to recreate the drama.

Observatory Operations David R. Silva,Rodger Doxsey,2006 Proceedings of SPIE present the original research papers presented at SPIE conferences and other high-quality conferences in the broad-ranging fields of optics and photonics. These books provide prompt access to the latest innovations in research and technology in their respective fields. Proceedings of SPIE are among the most cited references in patent literature.

Gemini Game Michael Scott,1993 A Virtual Reality Adventure At fourteen, twins Liz and BJ are smart gamemakers whose high-tech computer games sell in millions. But when their game Night's Castle becomes infected with a virus they are in trouble with the police. They must grab enough time to re-enter the VR world of Night's Castle and see if they can source the virus - if not they are ruined. Set in a city of the future, this book is a vivid and tense exploration of the VR world.

The Gemini Mysteries 1: The North Star Shepherd,2019-09-24 Join the Gemini Detective Agency and help the teenage sleuths solve the theft of a priceless necklace! Twins Zach and Evie Mamuya and their friend Vishal Desai make up the Gemini Detective Agency, which is mainly an excuse to get pizza together or hit the go-kart track. But when a priceless diamond necklace known as the North Star is stolen before an auction, the kids tag along with the twins' crime reporter mom and find a few clues that make them think this was no ordinary robbery. With the help of their classmate Sophia Boyd, the Gemini Detective Agency is on the case! Will they be able to sort through the clues and solve the mystery in time? Readers will love this interactive mystery, where clues can be found throughout the illustrations at the end of each chapter! The Gemini Mysteries: The North Star is an action-packed novel full of twists and turns that will keep readers guessing until the very end.

Biological and Medical Research in Space David Moore,Peter Bie,Heinz Oser,2012-12-06 Life Science studies in space were initially driven by the need to explore how man could survive spaceflight conditions; the effects of being launched under high accelerations, exposed to weightlessness and radiation for different periods of time, and returned to Earth in safety. In order to substantiate the detailed knowledge of potentially adverse effects, many model experiments were launched using organisms which ranged from bacteria, plants, invertebrates, rodents and primates through to man. Although no immediate life threatening effects were found, these experiments can be considered today as the precursors to life science research in space. Many unexplained effects on these life forms were attributed to the condition of weightlessness. Most of them were poorly recorded, poorly published, or left simply with anecdotal information. Only with the advent of Skylab, and later Spacelab, did the idea emerge, and indeed the infrastructure permit, weightlessness to be considered as an extended tool for research into some fundamental mechanisms or processes associated with the effect of gravity on organisms at all levels. The initial hypothesis to extrapolate from hypergravity through 1 x g to near 0 x g effects could no longer be retained, since many of the experiment results were seen to contradict the models or theories in the current textbooks of biology and physiology. The past decade has been dedicated primarily to exploratory research.

Go, Flight! Rick Houston,J. Milt Heflin,2015-09-28 At first glance, it looks like just another auditorium in just another government building. But among the talented men (and later women) who worked in mission control, the room located on the third floor of Building 30--at what is now Johnson Space Center--would become known by many as the Cathedral. These members of the space program were the brightest of their generations, making split-second decisions that determined the success or failure of a mission. The flight controllers, each supported by a staff of specialists, were the most visible part of the operation, running the missions, talking to

the heavens, troubleshooting issues on board, and, ultimately, attempting to bring everyone safely back home. None of NASA's storied accomplishments would have been possible without these people. Interviews with dozens of individuals who worked in the historic third-floor mission control room bring the compelling stories to life. Go, Flight! is a real-world reminder of where we have been and where we could go again given the right political and social climate.

Workshop on Exercise Prescription for Long-Duration Space Flight Bernard A. Harris (Jr.),1989 The National Aeronautics and Space Administration has a dedicated history of ensuring human safety and productivity in flight. Working and living in space long term represents the challenge of the future. Our concerns are no longer getting a man into space but in determining the effects on the human body of living in space. Space flight provides a powerful stimulus for adaptation, such as cardiovascular and musculoskeletal deconditioning. Extended-duration space flight will influence a great many systems in the human body. We must understand the process by which this adaptation occurs. The NASA is aggressively involved in developing programs which will act as a foundation for this new field of space medicine. The hallmark of these programs deals with prevention of deconditioning, currently referred to as countermeasures to zero g. Exercise appears to be most effective in preventing the cardiovascular and musculoskeletal degradation of microgravity. This document is a culmination of discussions from an exercise workshop held at the NASA Johnson Space Center. The proceedings from this session provide a comprehensive review of the physiology of exercise and recommendations on the use of exercise as a countermeasure for adaptation to a microgravity environment.
