East German Motor Vehicles in Pictures Christian Suhr, 2014-08-01 The post-war development of the automotive industry in East Germany (the German Democratic Republic) is quite a different story from that of the West. For many years after the Second World War the industry in the two halves of Germany grew in different directions. Automotive development in West Germany was aided and abetted by cash and investments from America and the Allies, while, for a time, industries of all types in East Germany suffered a certain amount of asset stripping and disinvestment. There was also a stark contrast between the state-driven production methods in the German Democratic Republic and the market-focused development in the West, which today, two decades after the collapse of the GDR, is hard to imagine. The GDR automotive industry and the vehicles it produced are explored in this book with neither political or economic bias, nor really with emphasis on the technical expertise that went into the cars' development--instead, the book celebrates the vehicles themselves. It is a pictorial documentation of over forty years of automotive manufacture in the GDR, and the most comprehensive record of these vehicles ever published. Here, for the first time in English, is a complete pictorial record of all those East German cars, trucks and buses. The authors have tracked down an example of every marque manufactured, and they are all featured here, with portraits taken in the authentic surroundings of the former East Germany, and each vehicle described by a marque expert to ensure accuracy of information. At last, automotive enthusiasts of all persuasions can indulge in this truly fascinating voyage of discovery.

Intelligent Robotics and Applications Ming Xie, Youlun Xiong, Caihua Xiong, Zhencheng Hu, 2009-12-16 The market demands for skills, knowledge and personalities have positioned robotics as an important field in both engineering and science. To meet these challenging demands, robotics has already seen its success in automating many industrial tasks in factories. And, a new era will come for us to see a greater success of robotics in non-industrial environments. In anticipating a wider deployment of intelligent and autonomous robots for tasks such as manufacturing, eldercare, homecare, edutainment, search and rescue, de-mining, surveillance, exploration, and security missions, it is necessary for us to push the frontier of robotics into a new dimension, in which motion and intelligence play equally important roles. After the success of the inaugural conference, the purpose of the Second International Conference on Intelligent Robotics and Applications was to

provide a venue where researchers, scientists, engineers and practitioners throughout the world could come together to present and discuss the latest achievement, future challenges and exciting applications of intelligent and autonomous robots. In particular, the emphasis of this year's conference was on "robot intelligence for achieving digital manufacturing and intelligent automations." This volume of Springer's Lecture Notes in Artificial Intelligence and Lecture Notes in Computer Science contains accepted papers presented at ICIRA 2009, held in Singapore, December 16-18, 2009. On the basis of the reviews and recommendations by the international Program Committee members, we decided to accept 128 papers having technical novelty, out of 173 submissions received from different parts of the world.

Video Games Around the World Mark J. P. Wolf,2015-05-22 Thirty-nine essays explore the vast diversity of video game history and culture across all the world's continents. Video games have become a global industry, and their history spans dozens of national industries where foreign imports compete with domestic productions, legitimate industry contends with piracy, and national identity faces the global marketplace. This volume describes video game history and culture across every continent, with essays covering areas as disparate and far-flung as Argentina and Thailand, Hungary and Indonesia, Iran and Ireland. Most of the essays are written by natives of the countries they discuss, many of them game designers and founders of game companies, offering distinctively firsthand perspectives. Some of these national histories appear for the first time in English, and some for the first time in any language. Readers will learn, for example, about the rapid growth of mobile games in Africa; how a meat-packing company held the rights to import the Atari VCS 2600 into Mexico; and how the Indonesian MMORPG Nusantara Online reflects that country's cultural history and folklore. Every country or region's unique conditions provide the context that shapes its national industry; for example, the long history of computer science in the United Kingdom and

Scandinavia, the problems of piracy in China, the PC Bangs of South Korea, or the Dutch industry's emphasis on serious games. As these essays demonstrate, local innovation and diversification thrive alongside productions and corporations with global aspirations. Africa • Arab World • Argentina • Australia • Austria • Brazil • Canada • China • Colombia • Czech Republic • Finland • France • Germany • Hong Kong • Hungary • India • Indonesia • Iran • Ireland • Italy • Japan • Mexico • The Netherlands • New Zealand • Peru • Poland • Portugal • Russia • Scandinavia • Singapore • South Korea • Spain • Switzerland • Thailand • Turkey • United Kingdom • United States of America • Uruguay • Venezuela
