Best Practices in Computer Network Defense: Incident Detection and Response M. Hathaway,IOS Press,2014-01-21 The cyber security of vital infrastructure and services has become a major concern for countries worldwide. The members of NATO are no exception, and they share a responsibility to help the global community to strengthen its cyber defenses against malicious cyber activity. This book presents 10 papers and 21 specific findings from the NATO Advanced Research Workshop (ARW) 'Best Practices in Computer Network Defense (CND): Incident Detection and Response, held in Geneva, Switzerland, in September 2013. The workshop was attended by a multi-disciplinary team of experts from 16 countries and three international institutions. The book identifies the state-of-the-art tools and processes being used for cyber defense and highlights gaps in the technology. It presents the best practice of industry and government for incident detection and response and examines indicators and metrics for progress along the security continuum.This book provides those operators and decision makers whose work it is to strengthen the cyber defenses of the global community with genuine tools and expert advice. Keeping pace and deploying advanced process or technology is only possible when you know what is available. This book shows what is possible and available today for computer network defense and for incident detection and response.

Developing and Assessing Options for the Global SOF Network Thomas S. Szayna,William Welser (IV),2013 The January 2012 Defense Strategic Guidance calls for small-footprint, low-cost approaches where possible in ensuring U.S. security in a 21st-century world of transnational threats. In response, U.S. Special Operations Command (USSOCOM) has developed and put forth its Global SOF Network vision, which calls for a distributed overseas posture for Special Operations Forces (SOF) as part of a new approach based on creating a structure that responds more effectively to emerging threats and deters future ones. USSOCOM posits that increasing SOF forward presence and creating these networks will deepen existing partnerships as well as provide new ones. This, in turn, will provide greater insight regarding conditions on the ground, shape the environment more effectively, and better enable local SOF partners to meet security threats. Building and employing a global SOF network and strengthening partners forms the core of the Global SOF Network vision. USSOCOM asked RAND to develop options for implementing the vision by creating and then applying an analytically rigorous methodology, and to investigate whether changes to command and control arrangements or Department of Defense funding and budgeting processes might be needed for its effective execution.

From Defending Forward to A Global Defense-in-Depth Antulio J. Echevarria II.,Bert B. Tussing,2003-10-31 In July of last year, the Bush administration published the National Strategy for Homeland Security (NSHS) which, while commendable in many ways, failed to take into account the effects of globalization in planning for the nation's security. Safeguarding America's homeland in an era of globalization requires a more comprehensive approach based on a global defense-in-depth. The NSHS amounts to little more than a strategic directive for the newly formed Department of Homeland Security (DHS), rather than a national strategy. It focuses principally on activities that take place within the nation's borders, making only a brief genuflection to the need for international cooperation. Other than a passing reference to Northern Command and its envisioned responsibilities in civil support, the NSHS fails to address the roles that the U.S. military's combatant commands should play. Finally, the NSHS fails to incorporate newly emerging technologies into an overarching strategic concept, or way, that would contribute to keeping Americans safe. To be sure, an internal focus with regard to protecting the homeland is at least partially warranted. However, the NSHS's shortsightedness overlooks the ways in which globalization-which is increasing the real and virtual mobility of people, things, and ideas worldwide-exacerbates the problem of safeguarding the homeland. The increased mobility of people, things, and ideas means that an attack against the American homeland need not take place on U.S. soil, and that the range of potential negative effects that could result from such attacks has increased. Consequently, America's homeland security challenge cannot be seen as merely a national problem; it is a problem of global dimensions. To address homeland security in terms of today's challenges requires a global perspective. Accordingly,

the NSHS should establish a global defense-in-depth characterized by an improved defensive coverage that uses a worldwide continuum of networked surveillance and intelligence-gathering systems to cover multiple intercept points for people, weapons, and dangerous materials, and that is linked to resources dedicated to reacting instantly to identified threats. This network must also include local law enforcement viii agencies and organizations. One logical nexus for tying together these various elements is the new Terrorist Threat Integration Center (TTIC), established May 1, 2003. Much of the technology necessary to begin erecting such a continuum already exists, or is under development. A global defense-in-depth would entail extending the deployment of permanent chemical, biological, and radiological sensors-such as those currently being deployed in major U.S. cities and subway systems-beyond U.S. borders to key population centers overseas. It would also involve continuous monitoring and tracking of suspected terrorists and other criminals. While legal constraints can and should-limit the monitoring or tracking of personnel within the United States, such restrictions do not apply to monitoring physical structures, such as high-security areas and key pieces of infrastructure like bridges, tunnels, airports, and border crossings. In terms of cyber-security, a global defense-indepth would employ a more decentralized approach based on the cooperation and vigilance of individuals worldwide in both the public and private sectors. It would also include political, economic, and socio-cultural forms of national power in critical roles aimed at crushing an immediate threat as well as bringing about changes that would prevent its resurgence.

Cyber Operations in Dod Policy and Plans Congressional Research Service,2015-01-05 Cyberspace is defined by the Department of Defense as a global domain consisting of the interdependent networks of information technology infrastructures and resident data, including the Internet, telecommunications networks, computer systems, and embedded processors and controllers. Attacks in cyberspace have seemingly been on the rise in recent years with a variety of participating actors and methods. As the United States has grown more reliant on information technology and networked critical infrastructure components, many questions arise about whether the nation is properly organized to defend its digital strategic assets. Cyberspace integrates the operation of critical infrastructures, as well as commerce, government, and national security. Because cyberspace transcends geographic boundaries, much of it is outside the reach of U.S. control and influence. The Department of Homeland Security is the lead federal agency responsible for securing the nation's non-security related digital assets. The Department of Defense also plays a role in defense of cyberspace. The National Military Strategy for Cyberspace Operations instructs DOD to support the DHS, as the lead federal agency, in national incident response and support to other departments and agencies in critical infrastructure and key resources protection. DOD is responsible for defensive operations on its own information networks as well as the sector-specific agency for the defense of the Defense Industrial Base. Multiple strategy documents and directives guide the conduct of military operations in cyberspace, sometimes referred to as cyberwarfare, as well as the delineation of roles and responsibilities for national cybersecurity. Nonetheless, the overarching defense strategy for securing cyberspace is vague and evolving. This report presents an overview of the threat landscape in cyberspace, including the types of offensive weapons available, the targets they are designed to attack, and the types of actors carrying out the attacks. It presents a picture of what kinds of offensive and defensive tools exist and a brief overview of recent attacks. The report then describes the current status of U.S. capabilities, and the national and international authorities under which the U.S. Department of Defense carries out cyber operations. Of particular interest for policy makers are questions raised by the tension between legal authorities codified at 10 U.S.C., which authorizes U.S. Cyber Command to initiate computer network attacks, and those stated at 50 U.S.C., which enables the National Security Agency to manipulate and extrapolate intelligence data—a tension that Presidential Policy Directive 20 on U.S. Cyber Operations Policy manages by clarifying the Pentagon's rules of engagement for cyberspace. With the task of defending the nation from cyberattack, the lines of command, jurisdiction, and authorities may be blurred as they apply to offensive and defensive cyberspace operations. A closely related issue is whether U.S. Cyber

Command should remain a sub-unified command under U.S. Strategic Command that shares assets and its commander with the NSA. Additionally, the unique nature of cyberspace raises new jurisdictional issues as U.S. Cyber Command organizes, trains, and equips its forces to protect the networks that undergird critical infrastructure. International law governing cyberspace operations is evolving, and may have gaps for determining the rules of cyberwarfare, what constitutes an "armed attack" or "use of force" in cyberspace, and what treaty obligations may be invoked.

Innovations in Computer Science and Engineering H. S. Saini,Rishi Sayal,A. Govardhan,Rajkumar Buyya,2018-05-25 The book is a collection of high-quality peer-reviewed research papers presented at the Fifth International Conference on Innovations in Computer Science and Engineering (ICICSE 2017) held at Guru Nanak Institutions, Hyderabad, India during 18-19 August 2017. The book discusses a wide variety of industrial, engineering and scientific applications of the engineering techniques. Researchers from academic and industry present their original work and exchange ideas, information, techniques and applications in the field of Communication, Computing and Data Science and Analytics.

Global Trends 2040 National Intelligence Council,2021-03 The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come. -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Acquisition Management of the Global Transportation Network ,2001 This report discusses the acquisition management of the Global Transportation Network by the U.S. Transportation Command. This report is one in a series of audit reports addressing DoD acquisition management of information technology systems. The Global Transportation Network is a central database system that augments the business process of the U.S. Transportation Command for managing and controlling in-transit assets. In addition, the Global Transportation Network allows more than 6,000 registered users to monitor movements of resources affecting the readiness of missions. Since achieving initial operating capability in April 1997, the Global Transportation Network processes more than 2 million transactions per day. The Assistant Secretary of Defense (Command, Control, Communications, and Intelligence) designated the Global Transportation Network as a Major Automated Information System (Acquisition Category IAM). The U.S. Transportation Command funds Global Transportation Network development, deployment, and operations and maintenance with its Transportation Working Capital Fund. Through FY 2005, Global Transportation Network costs will amount to $300 million. In addition, $211 million is programmed for FY 2002 through FY 2007 for system modernization.

   Convergence National Defense University (U. S.),2013 The Center for Complex Operations (CCO) has produced this edited volume, Convergence: Illicit Networks and National Security in the Age of Globalization, that delves deeply into everything mentioned above and more. In a time when the threat is growing, this is a timely effort. CCO has gathered an impressive cadre of authors to illuminate the important aspects of transnational crime and other illicit networks. They describe the clear and present danger and the magnitude of the challenge of converging and connecting illicit networks; the ways and means used by transnational criminal networks and how illicit networks actually operate and interact; how the proliferation, convergence, and horizontal diversification of illicit networks challenge state sovereignty; and how different national and international organizations are fighting back. A deeper understanding of the problem will allow us to then develop a more comprehensive, more effective, and more enduring solution.

   Global Defense Procurement and the F-35 Joint Strike Fighter Bert Chapman,2018-12-27 This book analyzes the development and evolution of the F-35 Joint Strike Fighter, a multinational aircraft endeavor involving the U.S. and many of its allies. The author provides a historical overview of jet fighter aircraft, discussing the different generations of these planes and their technical characteristics, as well as an outline of emerging international geopolitical and security trends the F-35 may see combat in. By examining the role of defense industries, domestic politics, and governmental oversight of the Joint Strike Fighter in various countries, the author concludes that this aircraft will be deployed in most of these countries to replace their aging jet fighter fleets and combat potential military aggression from China, Russia, and other revisionist international powers.

The 188 revised full papers presented were carefully reviewed and selected from 430 submissions. The papers are organized in topical sections on multimedia services, antennas, transmission technologies and wireless networks, communication theory, telecommunication pricing and billing, network performance and telecommunication services, active network and mobile agents, optical photonic techniques, optical networks, ad-hoc networks, signal processing, network performance and MPLS, traffic engineering, SIP, Qos and switches, network operation management, mobility and broadband wireless, cellular system evolution, personal communication, satellites, mobility management, network reliability, ATM and Web services, security, switching and routing, next generation systems, wireless access, Internet, etc.

   The Economics of the Global Defence Industry Keith Hartley,Jean Belin,2019-11-08 This book makes an original contribution to our knowledge of the world's major defence industries. Experts from a wide range of different countries – from the major economies of North America and Western Europe to developing economies and some unique cases such as China, India, Singapore, South Africa and North Korea – describe and analyse the structure, conduct and performance of the defence industry in that country. Each chapter opens with statistics on a key nation's defence spending, its spending on defence R&D and on procurement over the period 1980 to 2017, allowing for an analysis of industry changes following the end of the Cold War. After the facts of each industry, the authors describe and analyse the structure, conduct and performance of the industry. The analysis of 'structure' includes discussions of entry conditions, domestic monopoly/oligopoly structures and opportunities for competition. The section on 'conduct' analyses price/non-price competition, including private and state funded R&D, and 'performance' incorporates profitability, imports and exports together with spin-offs and technical progress. The conclusion explores the future prospects for each nation's defence industry. Do defence industries have a future? What might the future defence firm and industry look like in 50 years' time? This volume is a vital resource and reference for anyone interested in defence economics, industrial economics, international relations, strategic studies and

public procurement.

Guide to Network Defense and Countermeasures Randy Weaver,2013-01-01 GUIDE TO NETWORK DEFENSE AND COUNTERMEASURES, International Edition provides a thorough guide to perimeter defense fundamentals, including intrusion detection and firewalls. This trusted text also covers more advanced topics such as security policies, network address translation (NAT), packet filtering and analysis, proxy servers, virtual private networks (VPN), and network traffic signatures. Thoroughly updated, the new third edition reflects the latest technology, trends, and techniques including virtualization, VMware, IPv6, and ICMPv6 structure, making it easier for current and aspiring professionals to stay on the cutting edge and one step ahead of potential security threats. A clear writing style and numerous screenshots and illustrations make even complex technical material easier to understand, while tips, activities, and projects throughout the text allow students to hone their skills by applying what they learn. Perfect for students and professionals alike in this high-demand, fast-growing field, GUIDE TO NETWORK DEFENSE AND COUNTERMEASURES, International Edition, is a must-have resource for success as a network security professional.

Bouncing Back from War Trauma U S Military,Department of Defense (Dod),Katherine Linton,2019-08-06 Thirteen years ago, the United States entered into a Global War on Terror (GWOT) and has deployed over 2.5 million troops in three operations: Operation Enduring Freedom (OEF) in Afghanistan, the Philippines and other locations; Operation Iraqi Freedom (OIF); and Operation New Dawn (OND) in Iraq. Approximately 42 percent of servicemembers have deployed more than once in support of GWOT. As with earlier wars, the GWOT wrought physical and psychological war trauma to wounded warriors - and these visible or invisible injuries affect their lives forever. But the effects and recovery vary from person to person. This paper asks whether the visibility of the injury plays a role in a wounded warrior's resiliency. Ultimately, I find the visibility of the injury has some influence on a wounded warrior's resiliency across four recurring resiliency themes: first, a wounded warrior's personal support network; second, his or her core convictions; third, the types of rehabilitative programs available; and fourth, his or her military identity and experience. Although the overall percentage of troops with visible injuries is small, the prevalence of invisible wounds in the 2.5 million GWOT veterans is astounding. Experts estimate at least 50 percent of GWOT veterans will seek treatment for one or more problems such as Post Traumatic Stress Disorder (PTSD), Traumatic Brain Injury (TBI), depression, suicide attempt, and/or substance abuse. Studies also show that 31.8 percent of wounded warriors with visible injuries also suffer from PTSD. Traumatic Brain Injury (TBI) is another invisible injury in GWOT wounded warriors, affecting nearly 20 percent. When visible and invisible injury prevalence is combined, one can see the

impact the Global War on Terror has had on our servicemembers and their lives now as wounded warriors.
