Handbooks in Operations Research and Management Science: Simulation Shane G. Henderson,Barry L. Nelson,2006-09-02 This Handbook is a collection of chapters on key issues in the design and analysis of computer simulation experiments on models of stochastic systems. The chapters are tightly focused and written by experts in each area. For the purpose of this volume "simulation refers to the analysis of stochastic processes through the generation of sample paths (realization) of the processes. Attention focuses on design and analysis issues and the goal of this volume is to survey the concepts, principles, tools and techniques that underlie the theory and practice of stochastic simulation design and analysis. Emphasis is placed on the ideas and methods that are likely to remain an intrinsic part of the foundation of the field for the foreseeable future. The chapters provide up-to-date references for both the simulation researcher and the advanced simulation user, but they do not constitute an introductory level 'how to' guide. Computer scientists, financial analysts, industrial engineers, management scientists, operations researchers and many other professionals use stochastic simulation to design, understand and improve communications, financial, manufacturing, logistics, and service systems. A theme that runs throughout these diverse applications is the need to evaluate system performance in the face of uncertainty, including uncertainty in user load, interest rates, demand for product, availability of goods, cost of transportation and equipment failures. * Tightly focused chapters written by experts * Surveys concepts, principles, tools, and techniques that underlie the theory and practice of stochastic simulation design and analysis * Provides an up-to-date reference for both simulation researchers and advanced simulation users

Gold Metal Waters Brad T. Clark,Peter McCormick,2021-09-01 Gold Metal

Waters presents a uniquely inter- and transdisciplinary examination into the August 2015 Gold King Mine spill in Silverton, Colorado, when more than three million gallons of subterranean mine water, carrying 880,000 pounds of heavy metals, spilled into a tributary of the Animas River. The book illuminates the ongoing ecological, economic, political, social, and cultural significance of a regional event with far-reaching implications, showing how

this natural and technical disaster has affected and continues to affect local and national communities, including Native American reservations, as well as agriculture and wildlife in the region. This singular event is surveyed and interpreted from multiple diverse perspectives—college professors, students, and scientists and activists from a range of academic and epistemological backgrounds—with each chapter reflecting unique professional and personal experiences. Contributors examine both the context for this event and responses to it, embedding this discussion within the broader context of the tens of thousands of mines leaking pollutants into waterways and soils throughout Colorado and the failure to adequately mitigate the larger ongoing crisis. The Gold King Mine spill was the catalyst that finally brought Superfund listing to the Silverton area; it was a truly sensational event in many respects. *Gold Metal Waters* will be of interest to students and scholars in all disciplines, but especially in environmental history, western history, mining history, politics, and communication, as well as general readers concerned with human relationships with the environment. Contributors: Alane Brown, Brian L. Burke, Karletta Chief, Steven Chischilly, Becky Clausen, Michael A. Dichio, Betty Carter Dorr, Cynthia Dott, Gary Gianniny, David Gonzales, Andrew Gulliford, Lisa Marie Jacobs, Ashley Merchant, Teresa Montoya, Scott W. Roberts, Lorraine L.
