China's Golden Shield Greg Walton,International Centre for Human Rights and Democratic Development,2001 The advent of modern communication technology has brought new challenges for human rights advocates, particularly those living under repressive regimes. This report reveals how sophisticated technology, developed in Canada and promoted through a series of national and international processes, could undermine the principals enshrined in human rights agreements. It discusses China's Golden Shield project, which ultimately aims to integrate an online database with an all-encompassing surveillance network incorporating speech and face recognition, closed-circuit television, smart cards, credit records, and Internet surveillance technologies. It also provides a summary of Canada's trade promotion and human rights activities in China and a review of China's Internet regulations and domestic legislation.

Interest in data has been growing in recent years. Support for this peculiar class of digital information – its use, preservation and curation, and how to support researchers' production and consumption of it in ever greater volumes to create new knowledge, is needed more than ever. Many librarians and information professionals are finding their working life is pulling them toward data support or research data management but lack the skills required. The Data Librarian's Handbook, written by two data librarians with over 30 years' combined experience, unpicks the everyday role of the data librarian and offers practical guidance on how to collect, curate and crunch data for economic, social and scientific purposes. With contemporary case studies from a range of institutions and disciplines, tips for best practice, study aids and links to key resources, this book is a must-read for all new entrants to the field, library and information students and working professionals. Key topics covered include: • the evolution of data libraries and data archives • handling data compared to other forms of information • managing and curating data to ensure effective use and longevity • how to incorporate data literacy into mainstream library instruction and information literacy training • how to develop an effective institutional research data management (RDM) policy and infrastructure • how to support and review a data management plan (DMP) for a project, a key requirement for most research funders • approaches for developing, managing and promoting data repositories • handling and sharing confidential or sensitive data • supporting open scholarship and open science, ensuring data are discoverable, accessible, intelligible and assessable. This title is for the practising data librarian, possibly new in their post with little experience of providing data support. Forging the Shield Donald A. Carter,2015 This illustrated book that includes tables, charts, and maps primarily discusses the role of USAREUR (US Army Europe) in rearming and training the new German Army which was perhaps the Army's single greatest contribution toward maintaining security in Western Europe. Reamde Neal Stephenson,2011-09-20 "Stephenson has a once-in-a-generation gift: he makes complex ideas clear, and he makes them funny, heartbreaking, and thrilling." —Time The #1 New York Times bestselling author of Anathem, Neal Stephenson is continually rocking the literary world with his brazen and brilliant fictional creations—whether he's reimagining the past (The Baroque Cycle), inventing the future (Snow Crash), or both (Cryptonomicon). With Reamde, this visionary author whose mind-stretching fiction has been enthusiastically compared to the work of Thomas Pynchon, Don DeLillo, Kurt Vonnegut, and David Foster Wallace—not to mention William Gibson and Michael Crichton—once again blazes new ground with a high-stakes thriller that will enthrall his loyal audience, science and science fiction, and espionage fiction fans equally. The breathtaking tale of a wealthy tech entrepreneur caught in the very real crossfire of his own online fantasy war game, Reamde is a new high—and a new world—for the remarkable Neal Stephenson.

Health Data in the Information Age Institute of Medicine,Committee on Regional Health Data Networks,1994-01-01 Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data. Based on experience with databases now in operation and in development, Health Data in the Information Age provides a clear set of guidelines and principles for exploiting the potential benefits of aggregated health dataâ€without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. Health Data in the Information Age offers frank analysis and guidelines that will be invaluable to anyone interested in the operation of health care databases.

Blindsight Peter Watts,2006-10-03 Hugo and Shirley Jackson award-winning Peter Watts stands on the cutting edge of hard SF with his acclaimed novel, Blindsight Two months since the stars fell... Two months of silence, while a world held its breath. Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a biologist so radically interfaced with machinery that he sees x-rays and tastes ultrasound. You send a pacifist warrior in the faint hope she won't be needed. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. And you send a synthesist—an informational topologist with half his mind gone—as an interface between here and there. Pray they can be trusted with the fate of a world. They may be more alien than the thing they've been sent to find. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
