The Story of the Selma Voting Rights Marches in Photographs David Aretha, 2014-01-01 The Civil Rights Act of 1964 was a momentous victory for civil rights activists, but one major obstacle remained in the path toward equal rights for African Americans: the right to vote. In the South, segregationists prevented African Americans from voting. Civil rights leaders believed it was time for strong action and chose Selma, Alabama, as the rallying point. There, the marches and protests captured the nation's attention. Through gripping primary source photographs, author David Aretha explores this important time in American history.

Sanskrit Computational Linguistics Gérard Huet, Amba Kulkarni, Peter Scharf, 2009-02-18 This volume constitutes the thoroughly refereed post-conference proceedings of the First and Second International Symposia on Sanskrit Computational Linguistics, held in Rocquencourt, France, in October 2007 and in Providence, RI, USA, in May 2008 respectively. The 11 revised full papers of the first and the 12 revised papers of the second symposium presented with an introduction and a keynote talk were carefully reviewed and selected from the lectures given at both events. The papers address several topics such as the structure of the Paninian grammatical system, computational linguistics, lexicography, lexical databases, formal description of sanskrit grammar, phonology and morphology,

machine translation, philology, and OCR.

Think DSP Allen B. Downey, 2016-07-12 If you understand basic mathematics and know how to program with Python, you're ready to dive into signal processing. While most resources start with theory to teach this complex subject, this practical book introduces techniques by showing you how they're applied in the real world. In the first chapter alone, you'll be able to decompose a sound into its harmonics, modify the harmonics, and generate new sounds. Author Allen Downey explains techniques such as spectral decomposition, filtering, convolution, and the Fast Fourier Transform. This book also provides exercises and code examples to help you understand the material. You'll explore:

- Periodic signals and their spectrums
- Harmonic structure of simple waveforms
- Chirps and other sounds whose spectrum changes over time
- Noise signals and natural sources of noise
- The autocorrelation function for estimating pitch
- The discrete cosine transform (DCT) for compression
- The Fast Fourier Transform for spectral analysis
- Relating operations in time to filters in the frequency domain
- Linear time-invariant (LTI) system theory
- Amplitude modulation (AM) used in radio

Other books in this series include **Think Stats** and **Think Bayes**, also by Allen Downey.

Game Physics Cookbook Gabor Szauer, 2017-03-24 Discover over 100 easy-to-follow recipes to help you implement efficient game physics and collision detection in your games About This Book Get a comprehensive coverage of techniques to create high performance collision detection in games Learn the core mathematics concepts and physics involved in depicting collision detection for your games Get a hands-on experience of building a rigid body physics engine Who This Book Is For This book is for beginner to intermediate game developers. You don't need to have a formal education in games—you can be a hobbyist or indie developer who started making games with Unity 3D. What You Will Learn Implement fundamental maths so you can develop solid game physics Use matrices to encode linear transformations Know how to check geometric primitives for collisions Build a Physics engine that can create realistic rigid body behavior Understand advanced techniques, including the Separating Axis Theorem Create physically accurate collision reactions Explore spatial partitioning as an acceleration structure for collisions Resolve rigid body collisions between primitive shapes In Detail Physics is really important for game programmers who want to add realism and functionality to their games. Collision detection in particular is a problem that affects all game developers, regardless of the platform, engine, or toolkit they use. This book will teach you the concepts and formulas behind collision detection. You will also be taught how to build a simple physics engine, where Rigid Body

physics is the main focus, and learn about intersection algorithms for primitive shapes. You'll begin by building a strong foundation in mathematics that will be used throughout the book. We'll guide you through implementing 2D and 3D primitives and show you how to perform effective collision tests for them. We then pivot to one of the harder areas of game development—collision detection and resolution. Further on, you will learn what a Physics engine is, how to set up a game window, and how to implement rendering. We'll explore advanced physics topics such as constraint solving. You'll also find out how to implement a rudimentary physics engine, which you can use to build an Angry Birds type of game or a more advanced game. By the end of the book, you will have implemented all primitive and some advanced collision tests, and you will be able to read on geometry and linear Algebra formulas to take forward to your own games! Style and approach Gain the necessary skills needed to build a Physics engine for your games through practical recipes, in an easy-to-read manner. Every topic explained in the book has clear, easy to understand code accompanying it.

Sanskrit Computational Linguistics Amba Kulkarni, Gérard Huet, 2008-12-18 This volume presents the proceedings of the Third International Sanskrit Computational Linguistics Symposium hosted by the University of Hyderabad, Hyderabad, India during January 15–17, 2009. The series of symposia on Sanskrit Computational Linguistics began in 2007. The first symposium was hosted by INRIA at Rocquencourt, France in October 2007 as a part of the joint collaboration between INRIA and the University of Hyderabad. This joint collaboration expanded both geographically as well as academically covering more facets of Sanskrit Computational Linguistics, when the second symposium was hosted by Brown University, USA in May 2008. We received 16 submissions, which were reviewed by the members of the Program Committee. After discussion, nine of them were selected for presentation. These nine papers fall under four broad categories: four papers deal with the structure of Panini's *Astadhyaya*?. Two of them deal with parsing issues, . . . two with various aspects of machine translation, and the last one with the Web concordance of an important Sanskrit text. If we look retrospectively over the last two years, the three symposia in succession have seen not only continuity of some of the themes, but also steady growth of the community. As is evident, researchers from diverse disciplines such as linguistics, computer science, philology, and vyākaraṇa are collaborating with the . . . scholars from other disciplines, witnessing the growth of Sanskrit computational linguistics as an emergent discipline. We are grateful to S.D. Joshi, Jan Houben, and K.V.R. Krishnamacharyulu for accepting our invitation to deliver the invited speeches.

Man in Adaptation William Petersen, Yehudi A. Cohen, 2022-04-13 Underlying the anthropological

study of man is the principle that there is a reality to which man must adapt if he is to survive. Reproduce, and to perpetuate himself. Populations must adapt to the realities of the physical world and maintain a proper fit between their biological makeup and the pressures of the various niches of the world in which they seek to live. Social groups-where culture is found-must develop adaptive mechanisms in the organization of their social relations if there is to be order, regularity, and predictability in patterns of cooperation and competition and if they are to survive as viable units. This three-volume set of readings presents an introduction to anthropology that is unified and made systematic by focus on adaptations that have accompanied the evolution of man, from non-human primate to inhabitant of vast urban areas in modern industrial societies. *Man in Adaptation: The Cultural Present* introduces Cultural Anthropology also from the point of view of adaptation and provides coherence for the study of human societies from man's social beginnings to the present. The book deals sequentially with the more and more complex technologies and political and social structures that have enabled different societies to make effective use of the energy potentials in their habitats. This and the two companion volumes are the first attempt to unify the disparate subject matter of anthropology within a single and powerful explanatory framework. They incorporate the work of the most renowned anthropological experts on man, and they illuminate clearly one of the most important concepts around which one can build an investigation of the nature and scope of anthropology itself. For these reasons, they are recognized as indispensable reading for every professional anthropologist and as perhaps the best available means of introducing new students to the field.

The Horse Story Aedan Lias,2014-01-01 Aedan Lias is a nine year old recently identified having the learning disability of Dyslexia. His challenges with school work have been very apparent during in his early years of schooling and he struggles to comprehend some of the basics of reading and writing. With two siblings that do not have Dyslexia, Aedan and his parents were frustrated at his learning restraints. With the recent identification of Dyslexia the opportunities to learn his own way have over shadowed the restraints of the issues associated with it. Aedan has embraced it and with the support of his mum and dad has started to concentrate on his ability to create and express himself with pictures and words alike. He has recently enjoyed writing a book titled 'Finny' that has received a lot of attention. Not only has he sold many copies of his book but was recently interviewed by Brisbane radio station B105 to talk about his book and personal story. Learning to read and write through creative and fun practices has turned a disability into an ability. He will always struggle with traditional methods but learning his way on his terms and concentrating on his strengths is proving to be successful. He now has the bold goal of having his book in every school in Australia and Britain. Brisbane City Council have taken the first step by kindly purchasing 10 copies of 'Finny' to stock in their Libraries. Eager to learn and keep moving forward he has already started to write his second book. His parents and Aedan know there is a long road ahead and they appreciate the fact that Aedan does not face this challenge in society alone and that other parents, kids, social groups, caring teachers and associations will make this road easier. Aedan would love to grow into an inspirational person to help others with their journey as others have done for him.

Community Translation Mustapha Taibi,Uldis Ozolins,2016-02-25 Investigating an important field

within translation studies, Community Translation addresses the specific context, characteristics and needs of translation in and for communities. Traditional classifications in the fields of discourse and genre are of limited use to the field of translation studies, as they overlook the social functions of translation. Instead, this book argues for a classification that cuts across traditional lines, based on the social dimensions of translation and the relationships between text producers and audiences.

Community Translation discusses the different types of texts produced by public authorities, services and individuals for communities that need to be translated into minority languages, and the socio-cultural issues that surround them. In this way, this book demonstrates the vital role that community translation plays in ensuring communication with all citizens and in the empowerment of minority language speakers by giving them access to information, enabling them to participate fully in society.

Endurance Rick Broadbent, 2016-04-21 Shortlisted for the William Hill Sports Book of the Year A runner must run with dreams in his heart. Emil Zatopek. In the summer of 1952 Emil Zatopek became the king of the running world with an unprecedented distance treble at the Olympic Games in Helsinki. Together with his wife Dana, who won another gold medal in the javelin, they were the embodiment of sporting romance. Born on the same day, they were champions on the same day too. Yet in 1968 this affable but eccentric Czech soldier was betrayed by his Communist paymasters and cast out into wilderness. Hidden from world view, monitored by the secret police and forced to live in a caravan in mining country, he became the invisible hero. 'Endurance' is the first biography to document the remarkable rise, fall and rehabilitation of a man voted the 'greatest runner of all time' by 'Runner's World' in 2013. It is also the story of a golden age of sport played out against a backdrop of Cold War politics and paranoia. From the London Olympics of 1948 to Czech concentration camps, this is an uplifting and harrowing story of survival. As Emil rises to global fame, his old coach is locked up and tortured by StB henchmen. Their diverging paths expose the fickleness of popularity and eventually cross again when Zatopek's world is torn asunder. All both men can do is endure. The running world of this era is brought to life by dramatic accounts of Zatopek's great triumphs, manifold records and a rich collection of characters vying to dethrone him. In Britain the sharp-tongued Gordon Pirie falls foul of the media as he becomes obsessed with Zatopek and adopts increasingly-masochistic methods; mild-mannered marathon champion Jim Peters begins a quest that would make "women weep and grown men lose their lunch". In France Alain Mimoun crawls from the bloody carnage of his war-time exploits to overcome racial snubs and become known as Zatopek's Shadow; and in the Soviet Union, the tragic figure of Vladimir Kuts is moulded into a brutal running machine at huge cost. Only Zatopek

manages to bridge this East-West divide as a savage power struggle is fought in both the Olympic arena and in the corridors of power. Due to extensive access to those involved, including Dana herself, award-winning Times author Rick Broadbent has written a vivid history involving blood and guns and a love that sustained the cruellest twists of fate. From heady nights at White City to the brave resistance during the Prague Spring, this is a book that plants the son of a carpenter at the very centre of a revolution. Whether talking to his rivals on the track or Red Army troops as tanks roll into Prague, Zatopek's humanity shines through and carries all. With traces of 'Chariots of Fire' and Laura Hillenbrand's 'Unbroken', Endurance is both a wonderful love story and a landmark tale of hope and strength in the face of crushing opposition. It's at the borders of pain and suffering that the men are separated from the boys. Emil Zatopek
