Open Source Intelligence Techniques Michael Bazzell,2016 This book will serve as a reference guide for anyone that is responsible for the collection of online content. It is written in a hands-on style that encourages the reader to execute the tutorials as they go. The search techniques offered will inspire analysts to think outside the box when scouring the internet for personal information. Much of the content of this book has never been discussed in any publication. Always thinking like a hacker, the author has identified new ways to use various technologies for an unintended purpose. This book will improve anyone's online investigative skills. Among other techniques, you will learn how to locate: Hidden Social Network Content, Cell Phone Owner Information, Twitter GPS & Account Data, Hidden Photo GPS & Metadata, Deleted Websites & Posts, Website Owner Information, Alias Social Network Profiles, Additional User Accounts, Sensitive Documents & Photos, Live Streaming Social Content, IP Addresses of Users, Newspaper Archives & Scans, Social Content by Location, Private Email Addresses, Historical Satellite Imagery, Duplicate Copies of Photos, Local Personal Radio Frequencies, Compromised Email Information, Wireless Routers by Location, Hidden Mapping Applications, Complete Facebook Data, Free Investigative Software, Alternative Search Engines, Stolen Items for Sale, Unlisted Addresses, Unlisted Phone Numbers, Public Government Records, Document Metadata, Rental Vehicle Contracts, Online Criminal Activity.

Afghanistan Provincial Reconstruction Team Handbook United States United States Army,2011-02 This handbook is a guide to the Provincial Reconstruction Team (PRT) in Afghanistan. It contains part of the ISAF PRT Handbook as well as background information on each of the Provinces. There is also a chapter on the Tactical Conflict Assessment and Planning Framework currently used in Afghanistan. The Government of the Islamic Republic of Afghanistan is combating an insurgency and simultaneously rebuilding its infrastructure to become a strong sovereign state no longer requiring assistance from the U.S. government (USG) or other nations. Key to the success of this effort is the provincial reconstruction team (PRT). The U.S. Army established PRTs from a need to stabilize the operating environment by developing the infrastructure and building capacity necessary for the Afghan people to succeed in a post-conflict environment. By design, PRTs have grown into interagency and multinational teams in both organization and scope. PRTs have become an integral part of International Security Assistance Force's long-term strategy to transition the lines of security, governance, and economics to the Afghan people. As we look to the future we know the PRT effort will draw to a close and transition its efforts toward the provincial government. Until that event occurs and while it occurs it remains vital that new PRT personnel are familiar with the concepts, structure, and management of PRTs and the lessons learned and best practices established by their predecessors. This handbook focuses on Afghanistan PRTs; the information contained in this handbook comes from multiple sources inside and outside the USG with the understanding that the way PRTs operate has changed and evolved over time.

The assumption is that none of the... instructors is an expert in the topic of intelligence. Even those who are former practitioners are likely to have only a limited knowledge of the very broad field of intelligence, as most spend their careers in one or two agencies at most and may have focused only on collection or analysis of intelligence or support to those activities. In each of the articles the intent is to identify the important learning points for students and the materials that an instructor can use to teach. This includes books, articles, and websites...

The Smart Nation Act Robert David Steele, 2006-01-01 There are immediate benefits to both national security and national prosperity of creating a government-wide open source intelligence program--preferably not managed by the intelligence specialists, who have repeatedly demonstrated their complete disdain for open sources of information. Those benefits would include the provision of an insurance policy for intelligence coverage of Third World security issues; an immediate increase in the timeliness, coverage and political utility of overtly available information; an immediate increase in open source information sharing across the departments and with the private sector; and finally, the provision of a foundation for a web-based OSINT exchange with allies, other nations and international groups -- p.33
