Introduction to Google Translate Gilad James, PhD, Google Translate is a multilingual translation service provided by Google. It allows users to translate words, phrases, and entire documents between multiple languages. The service was launched in April 2006 and has since been constantly updated to provide more accurate translations. Initially offering translations in only two languages, Google Translate now supports over 100 languages. The translation process works by analyzing the text or document input by the user, breaking it up into smaller segments, and then using statistical algorithms to match these segments with translations from its database. Google Translate has been a helpful tool for people to communicate across different languages, whether it be for business or personal use. However, it must be noted that automated translations often carry a high risk of inaccuracies due to the complexities inherent in language and the nuances of different cultures and contexts. It is always recommended to use translations as a starting point, and then have a native speaker review and refine the language to ensure accuracy.

Analysing English-Arabic Machine Translation Zakaryia Almahasees, 2021-11-30
Machine Translation (MT) has become widely used throughout the world as a medium of communication between those who live in different countries and speak different languages. However, translation between distant languages constitutes a challenge for machines. Therefore, translation evaluation is poised to play a significant role in the process of designing and developing effective MT systems. This book evaluates three prominent MT systems, including Google Translate, Microsoft Translator, and Sakhr, each of which provides translation between English and Arabic. In the book Almahasees scrutinizes the capacity of the three systems in dealing with translation between English and Arabic in a large corpus taken from various domains, including the United Nation (UN), the World Health Organization (WHO), the Arab League, Petra News Agency reports, and two literary texts: *The Old Man and the Sea* and *The Prophet*. The evaluation covers holistic analysis to assess the output of the three systems in terms of Translation Automation User Society (TAUS) adequacy and fluency scales. The text also looks at error analysis to evaluate the systems' output in terms of orthography, lexis, grammar, and semantics at the entire-text level and in terms of lexis, grammar, and semantics at the collocation level. The research findings contained within this volume provide important feedback about the capabilities of the three MT systems with respect to English-Arabic translation and paves the way for further research on such an important topic. This book will be of interest to scholars and students of translation studies and translation technology.

Exploring the Situational Interface of Translation and Cognition Maureen Ehrensberger-Dow, Birgitta Englund Dimitrova, 2018-08-02 The contributions of this volume explore the dynamics of the interface between the cognitive and situational levels in translation and interpreting. Until relatively recently, there has been an invisible line in translation and interpreting studies between cognitive research (e.g., into mental processes or attitudes) and sociological research (e.g., concerning organization, status, or institutions). However, rapid developments in translation and interpreting practices (professional, non-professional) have brought to the fore the need to rethink theoretical perspectives and to apply new research methods. The chapters in this volume aim to contribute to this discussion through conceptual and/or empirical research. Drawing on different theoretical and methodological frameworks, they offer insights into diverse translation and interpreting situations, in a number of different countries and cultures, and their consequences for individual and collective cognition. Machine Learning in Translation Corpora Processing Krzysztof Wolk, 2019-02-25 This book reviews ways to improve statistical machine speech translation between Polish and English. Research has been conducted mostly on dictionary-based, rule-based, and syntax-based, machine translation techniques. Most popular methodologies and tools are not well-suited for the Polish language and therefore require adaptation, and language resources are lacking in parallel and monolingual data. The main objective of this volume to develop an automatic and robust Polish-to-English translation system to meet specific translation requirements and to develop bilingual textual resources by mining comparable corpora.
