ICCES covers all aspects of applied sciences and engineering: theoretical, analytical, computational, and experimental studies and solutions of problems in the physical, chemical, biological, mechanical, electrical, and mathematical sciences. As such, the book discusses highly diverse topics, including composites; bioengineering & biomechanics; geotechnical engineering; offshore & arctic engineering; multi-scale & multi-physics fluid engineering; structural integrity & longevity; materials design & simulation; and computer modeling methods in engineering. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations.

Rhea 41070 Linda Mooney,2015-06-28 Bock Gammon is a freedom runner. A man with a space ship for hire. He has heard of Replacements and knows they exist, but he has never personally come across one. In fact, he finds the whole idea repugnant--growing a living being specifically for the purpose of harvesting his body parts. So do the governments in many of the galaxies who have declared Replacements illegal. Which is why he is stunned to discover his latest assignment is to bring a Replacement to one of the wealthiest men in the Chatta Dul system. If he hadn't so desperately needed the money, he wouldn't have accepted the job. It doesn't take long for Bock to realize that Rhea 41070 isn't just one-of-a-kind, she's also unlike any woman he has ever met. And the closer they get to the point of delivery, the more he knows he can't walk away and leave her behind to be dissected. Somehow, he has to find a way to save her, despite the odds and hundreds of well-armed men awaiting their return.
