*Applications of Computer Algebra* Ilias S. Kotsireas, Edgar Martínez-Moro, 2017-07-26 The Applications of Computer Algebra (ACA) conference covers a wide range of topics from Coding Theory to Differential Algebra to Quantum Computing, focusing on the interactions of these and other areas with the discipline of Computer Algebra. This volume provides the latest developments in the field as well as its applications in various domains, including communications, modelling, and theoretical physics. The book will appeal to researchers and professors of computer algebra, applied mathematics, and computer science, as well as to engineers and computer scientists engaged in research and development.

*Computer Vision - ECCV 2020 Workshops* Adrien Bartoli, Andrea Fusiello, 2021-01-02 The 6-volume set, comprising the LNCS books 12535 until 12540, constitutes the refereed proceedings of 28 out of the 45 workshops held at the 16th European Conference on Computer Vision, ECCV 2020. The conference was planned to take place in Glasgow, UK, during August 23-28, 2020, but changed to a virtual format due to the COVID-19 pandemic. The 249 full papers, 18 short papers, and 21 further contributions included in the workshop proceedings were carefully reviewed and selected from a total of 467 submissions. The papers deal with diverse computer vision topics. Part IV focusses on advances in image manipulation; assistive computer vision and robotics; and computer vision for UAVs.

**Technology of Object-oriented Languages and Systems, TOOLS 10** Boris Magnusson, Bertrand Meyer, Jean-François Perrot, 1993

**Leading in Inter-Organizational Networks** Matthias Mitterlechner, 2018-08-31 In view of the rising importance and prevalence of network-based collaboration, this book aims to meet the need for more theory in this area. Theoretically conceptualizing and empirically describing the practice of reflexive leadership in inter-organisational networks, it explores how member organisations approach reflexive leadership and the associated challenges. Examining these questions from wider leadership theory perspectives as well as a tighter focus upon inter-organizational networks, the author specifically explores how reflexive leadership can be sustained and how social and political contexts may obstruct or support its use, acceptance and practice. Based on in-depth qualitative empirical fieldwork in the Swiss healthcare sector, the book offers a novel practice-theoretical model for use in inter-organizational networks.

*Electric Machines* Ion Boldea, Lucian N. Tutelea, 2021-10-08 This Second Edition extensively covers advanced issues/subjects in electric machines, starting from principles, to applications and case studies with ample graphical (numerical) results. This textbook is intended for second (and third) semester courses covering topics such as modeling of transients, control principles, electromagnetic and thermal finite element analysis, and optimal design (dimensioning). Notable recent knowledge with strong industrialization potential has been added to this edition, such as: Orthogonal models of multiphase a.c. machines Thermal Finite Element Analysis of (FEA) electric machines FEA-based-only optimal design of a PM motor case study Line start synchronizing premium efficiency PM induction machines Induction machines (three and single phase), synchronous machines with DC excitation, with PM-excitation, and with magnetically salient rotor and a linear Pm oscillatory motor are all investigated in terms of transients, electromagnetic FEM analysis and control principles. Case studies, numerical examples, and lots of discussion of FEM results for PMSM and IM are included throughout the book. The optimal design is treated in detail using Hooke-Jeeves and GA algorithms with case comparison studies in dedicated chapters for IM and PMSM. Numerous computer simulation programs in MATLAB® and Simulink® are available online that illustrate performance characteristics present in the chapters, and the FEM and optimal design case studies (and codes) may be used as homework to facilitate a deeper understanding of fundamental issues.

**Linear Genetic Programming** Markus F. Brameier, Wolfgang Banzhaf, 2007-02-25 Linear Genetic Programming presents a variant of Genetic Programming that evolves imperative computer programs as linear sequences of instructions, in contrast to the more traditional functional

expressions or syntax trees. Typical GP phenomena, such as non-effective code, neutral variations, and code growth are investigated from the perspective of linear GP. This book serves as a reference for researchers; it includes sufficient introductory material for students and newcomers to the field.

**Selberg Trace Formulae and Equidistribution Theorems for Closed Geodesics and Laplace** Steven Zelditch,1992 This work is concerned with a pair of dual asymptotics problems on a finite-area hyperbolic surface. The first problem is to determine the distribution of closed geodesics in the unit tangent bundle. The second problem is to determine the distribution of eigenfunctions (in microlocal sense) in the unit tangent bundle.

*Automatic Control in Space 1982* P. Th. L. M. Van Woerkom,2014-05-23 Automatic Control in Space 1982 covers the proceedings of the Ninth IFAC/ESA Symposium. Comprised of 62 chapters, this book covers issues relevant in aerospace, such as engineering, hardware, operations, and theories. This book discusses several topics that concern space explorations, such as L-SAT attitude and orbit control system; methods of dynamic flight control; methods of satellite attitude control using a bias-momentum; and ion sensor signal fluctuations. This text will be of great interest to engineers, researchers, and professionals whose work is in line with aerospace.

**The Power of Morality in Movements** Anders Sevelsted,Jonas Toubøl,2022-11-07 This Open Access book explores the role of morality in social movements. Morality has always been central to social movements whether it be in the form of the moral foundations of movement claims, politics and ideologies, the values motivating participation, the new moral principles envisioned and practiced among movement participants, or the overall struggle over society's moral values that movements engage in. This is evident in movements emerging from recent interlinked crises: the crisis of human rights, the climate crisis, and the developing crisis of democracy. In analyzing these current events through a variety of theoretical, methodological, and empirical lenses, this book brings morality to the forefront of the discussion, allowing for a rethinking of its role. The book is divided into five parts. The first part introduces and explores the central concept of the book, outlining the dominant existing approaches to morality and ethics in the extant movement and civil society literature. The following three parts investigate morality in relation to topics and movements that are either prominent to contemporary politics or salient to the question of morality. In these empirically informed parts, the authors apply a diverse selection of methods spanning fieldwork, historiography, traditional and novel statistical analytical methods, and big data analysis to a diverse selection of data. Topics discussed include refugee solidarity movements, male privilege and anti-feminism movement, environmental and climate justice movements, and religious activism. The fifth and closing part of the book focuses on the more abstract theoretical question of the relationship between morality and ethics and activist practices and points to future research agendas. This book will be of general interest to students, scholars and academics within the disciplines of political sociology, -science and -anthropology and of particular interest to academics in the subfields of social movement and civil society studies.

Languages and Compilers for Parallel Computing Larry Carter,Jeanne Ferrante,2003-06-29 In August 1999, the Twelfth Workshop on Languages and Compilers for Parallel Computing (LCPC) was hosted by the Hierarchical Tiling Research group from the Computer Science and Engineering Department at the University of California San Diego (UCSD). The workshop is an annual international forum for leading research groups to present their current research activities and the latest results. It has also been a place for researchers and practitioners to interact closely and exchange

ideas about future directions. Among the topics of interest to the workshop are language features, code generation, debugging, -timization, communication and distributed shared memory libraries, distributed object systems, resource management systems, integration of compiler and runtime systems, irregular and dynamic applications, and performance evaluation. In 1999, the workshop was held at the International Relations/Pacific Studies Auditorium and the San Diego Supercomputer Center at UCSD. Seventy-seven researchers from Australia, England, France, Germany, Korea, Spain, and the United States attended the workshop, an increase of over 50% from 1998.

*Expertise in Transition* Yrjö Engeström, 2018-06-30 This book challenges standard notions of expertise. In today's world, truly effective expertise is built on fluid collaboration between practitioners from multiple backgrounds. Such collaborative expertise must also be transformative, must be able to tackle emerging new problems and changes in its organizational framework. Engeström argues that the transition toward collaborative and transformative expertise is based on three pillars: expertise needs to be understood and cultivated as a collective activity; expertise needs to be built on flexible knot-working among diverse practitioners; and expertise needs to be fostered as the expansive learning of models and patterns of activity that are in progress. In this book, Engeström recasts expertise as fluid collaboration on complex tasks that requires envisioning the future and mastering change.

**Condensed Matter Field Theory** Alexander Altland, Ben D. Simons, 2010-03-11 This primer is aimed at elevating graduate students of condensed matter theory to a level where they can engage in independent research. Topics covered include second quantisation, path and functional field integration, mean-field theory and collective phenomena.

The Political History of Food Paul Ariès, 2023-07-04 How was human (in)equality built across the table? Why were the first great banquets at the origin of the communal goods of humanity? Who, after forcing men from eating bread, wanted to forbid them chestnuts and popularized the potato? The Egyptian food table invented the notion of symbols for food. The Greek food table invented the notion of sharing. The Roman food table invented the concept of pleasure. How was the person, caught eating and drinking alone, punished? Why did people die less of hunger in ancient times than in Africa in the 21st century? Why in China do people eat round things to show their love? How and why do we choose to eat this way? Why do societies choose to express their unity through their conception of the food table? Did the division in prehistoric societies first occur at the dinner table? Did

the first great civilizations make the food table a major political tool with the rationing and banqueting systems in Mesopotamia and Egypt? Were the Gallic food tables swept away by the political alliance between the Catholic Church and the new masters coming from the great invasions? Did the feudal politico-religious system durably structure our food table? Did absolute monarchy have to invent its own conception of the food table with music, dance and architecture? What were the great French revolutionary conceptions of the food table? Did the philosophy of the Enlightenment change our conception of the food table? Did the French Revolution impose a new way of eating with the adoption of the three-fold table service and the banning of cuisine made with mixtures and knots? Does the grammar of our food correspond to a social project? Was Robespierre afraid of the great popular banquets? Did the Republic enforce the eating of potatoes instead of the breadfruit tree (the chestnut tree)? How was the myth of Parmentier imposed on schools? What were the great food utopias in the history of the world? Paul Ariès invites you on a gourmet journey from prehistory to the present day. You will know (almost) everything about what our ancestors ate and drank. The prehistoric food table, the ancient food table, the Gallic food table... Paul Ariès shows how the tables of the world remain largely dependent on the tables of the past. This political history of food is the result of thirty years of teaching and research. Better known as a political scientist specializing in ecology than as a specialist of the food table, Paul Ariès has been teaching since 1988 in the most prestigious international hotel schools. He is the author of *La fin des mangeurs* (DDB), *Les Fils de McDo* (L'Harmattan), and *Manger sans peur* (Goliath).
