Graphic Science and Design Thomas Ewing French, Charles J. Vierck, Robert Jay Foster, 1984

Interactive Graphics in CAD Y. Gardan, Lucas, 2012-12-06 In a society in which the use of information technology is becoming commonplace it is natural that pictures and images produced by electronic means should be increasing in importance as a means of communication. Computer graphics have only recently come to the attention of the general public, mainly through animated drawings, advertisements and video games. The quality of the pictures is often such that, unless informed of the fact, people are unaware that they are created with the help of computers. Some simulations, those developed in connection with the space shuttle for example, represent a great and rapid progress. In industry, computer graphic techniques are used not only for the presentation of business data, but also in design and manufacture processes. Such computer-assisted systems are collectively represented by the acronym CAX. In CAD/CAM (computer-assisted design/manufacture), interactive graphic techniques have attained considerable importance. In CAD/CAM systems a dialogue can be established between the user and the machine using a variety of easy to operate communication devices. Due to the recent developments in hardware and software (for modelling, visual display, etc), a designer is now able to make decisions based on the information presented (plans, perspective drawings, graphics, etc) with the help of interactive, graphic techniques. These constitute the most visible and perhaps most spectacular aspect of CAD/CAM systems.
