Introduction to Art Image Access Murtha Baca,2002-07-25 With the proliferation of information on the World Wide Web and in other networked environments, one of the main things that users search for are images of works of art and architecture. End-users generally try to search for images by subject, a process that often proves unsatisfactory and frustrating. Cataloging images of works of art has always been challenging, but now that end-users need only have access to the Internet, the challenge is more daunting than ever. This illustrated book on using metadata standards and controlled vocabularies to catalog and provide accurate end-user access to images of works of art also focuses on decisions that must be made about the arrangement of visual records, descriptive principles and methodologies, and requirements for access. Introduction to Art Image Access addresses the issues that underlie a visual collection to make it accessible in an electronic environment. A glossary, selected bibliography, and list of acronyms and URLs are included.

**Data Mining on Multimedia Data** Petra Perner,2003-07-01 Despite being a young field of research and development, data mining has proved to be a successful approach to extracting knowledge from huge collections of structured digital data collection as usually stored in databases. Whereas data mining was done in early days primarily on numerical data, nowadays multimedia and Internet applications drive the need to develop data mining methods and techniques that can work on all kinds of data such as documents, images, and signals. This book introduces the basic concepts of mining multimedia data and demonstrates how to apply these methods in various application fields. It is written for students, ambitioned professionals from industry and medicine, and for scientists who

want to contribute R&D work to the field or apply this new technology.
