**Artificial Gravity** Gilles Clément, Angeli Buckley, 2007-05-28 This book reviews the principle and rationale for using artificial gravity during space missions, and describes the current options proposed, including a short-radius centrifuge contained within a spacecraft. Experts provide recommendations on the research needed to assess whether or not short-radius centrifuge workouts can help limit deconditioning of physiological systems. Many detailed illustrations are included.

**Singularities in 3d Gauge/gravity Duality** William Jensen Cottrell, 2017 In this thesis we explore the holographic duality between gravitational singularities in four dimensions and the infrared behavior of three-dimensional field theories. We primarily focus on antibrane and repulson singularities, though we will also discuss enhancon, conifold, and coordinate singularities at various points as well. For antibrane singularities dual to dynamical susy breaking we argue that curvature corrections are necessary in order to understand the resolution while for bulk theories dual to 3d  $[N]=4$  quiver gauge theories we show that repulsons are generically present when the field theory does not admit a susy FI deformation. Finally, we comment on the mechanisms that are at play to resolve these singularities.

*Greenglow* Ronald Evans, 2015-04-28 This book describes an exciting, but unfinished scientific adventure story. It tells of the epic struggle by scientists to wrest the secrets from nature of how to control the force of electromagnetism and how to control aerodynamic forces. Control of the force of

gravity has yet to be achieved. Analogies suggest where a breakthrough might be made. Greenglow & the search for gravity control follows the attempts mankind has made over the years to understand gravity as well as looking at more recent experiments to control it. The book is written by an engineer, who worked in the aerospace industry, and who persuaded BAE Systems to sponsor Project Greenglow, a small research programme aimed at investigating some ideas for controlling gravity. Based on analogies in nature, the book provides a road map for scientists, engineers and the general public who want to know more about gravity and our search to control it. Discovering nature's secrets is an exciting, but unfinished story - there is much we still don't know. The book describes the quest by scientists to gain control of gravity and electromagnetism, the two long-range forces of nature. Faraday discovered the secret of electromagnetic control. Newton began the search for gravity control, later continued by Einstein, but it eluded them. One day the secret will be discovered either by careful experimentation or, as is often the case, by stumbling across it by chance. In the future it is expected that gravity control will underpin a new method of propulsion and this book concludes with a look at some possible forms. Greenglow is a fascinating read for any aerospace engineers, physicists, experimental research scientists, science journalists, science historians, futurologists, UFO enthusiasts, Star Trekkies and general public interested in the breakthrough in understanding of how to control gravity.

Action Gravity Jeff Lee, 2021-02-09 The Cause of Gravity: The Holy Grail of all Scientific Revelation For over four centuries now, Natural Philosophers and Theoretical Physicists have been desperately searching for the answer to that elusive and intractable question that is still hanging around today: What is the true cause of Gravity? The present-day view by Theoretical Physics Academia is that gravity can be described as: curved, or warped, space, or spacetime. So, how does

this space, or spacetime, curve, or warp? Do certain particles of space get closer together in one vicinity of space and further apart in another? Are there compressions and rarefactions in space like there are in air? How can empty space form a path for a moving object to travel through if it is completely empty? The answer is that: Space is NOT empty. According to a brand-new type of physics called: Reality Physics, we now know that space is not empty but contains an active plenum structure that is continually being created by the active, two-dimensional, outward motion of Time with Space. What this actually means is that the Now Point in Time expands outward into space with an active, two-dimensional, omnidirectional, omnipositional displacement at the Speed of Light, or:  $c = 299,792,458$  meters per second, and that it also forms an inertial reference background pressure density throughout the universe. We find that by placing a body of mass into this active inertial reference background pressure density we can create a vicinity of less active pressure density at that location where the mass is located. This would, obviously, cause the greater pressure density surrounding the mass to implode with an accelerating motion down towards the surface of the mass body where the pressure density is less. We call this implodingly accelerating motion of the inertial reference background: Gravitational Acceleration, and this is what actually causes small objects to fall to the ground at the surface of the large body of mass. Gravity is an action, not a curvature or warpage of anything, and therefore it must be caused by an action, as revealed here by: ACTION GRAVITY of Reality Physics.

**Gravity Manipulation and its Binary Nature** Carlos Calvet, 2005-06-07 Scientific Study from the year 2003 in the subject Physics - Theoretical Physics, University of Barcelona, 13 entries in the bibliography, language: English, abstract: By assigning the elementary Planck units to the units of Newton's Gravitational Constant (G), it resulted that G is actually a function of vacuum (zero point)

energy (ZPE) and that it can be therefore manipulated. This paper cites and discusses some possible kinds of Gravity manipulation. ZPE appears to reduce gravity as it is inversely proportional to the gravitational force. From Coulomb's Constant, the "Planck charge" ( $q_P$ ) and the corresponding quantum vacuum (QV) lepton/photon ratio are calculated, the latter by dividing  $q_P$  by the Planck mass. The QV-lepton/photon ratio is very different to the analogous baryon/photon ratio that is predicted by Standard Model, demonstrating that the QV and space-time are two different entities (e.g., that they have a different number of dimensions). A dimensional model for the QV that evolves from, and is supported by, the lepton/photon ratio is presented herein, together with emerging technologies. By expressing natural constants in terms of Planck units, we found that the Universal Gravitation Constant is the inverse of vacuum density matter-equivalent and the square of Planck time, being the former equal to Planck mass divided by Planck volume. The corresponding new equation of gravitation presented here reveals that gravitation can be manipulated via vacuum energy. Additionally, from Coulomb's constant, we can derive the "Planck charge" and the corresponding density of virtual vacuum particle pairs. A discussion of the ramifications of these findings is also presented.

Topological Gauge Theory, Cartan Geometry, and Gravity Derek Keith Wise, 2007

**Gravity** Chris Woodford, 2012-07-15 Gravity is everywhere. It is the force that keeps the earth orbiting around the sun. Yet, it has always been one of the most mysterious forces throughout human history. This book explores some of the scientists responsible for what we know about gravity and how this knowledge has impacted modern society.

Gauge/Gravity Duality Martin Ammon, Johanna Erdmenger, 2015-04-09 Gauge/gravity duality creates new links between quantum theory and gravity. It has led to new concepts in mathematics

and physics, and provides new tools to solve problems in many areas of theoretical physics. This book is the first textbook on this important topic, enabling graduate students and researchers in string theory and particle, nuclear and condensed matter physics to get acquainted with the subject. Focusing on the fundamental aspects as well as on the applications, this textbook guides readers through a thorough explanation of the central concepts of gauge/gravity duality. For the AdS/CFT correspondence, it explains in detail how string theory provides the conjectured map. Generalisations to less symmetric cases of gauge/gravity duality and their applications are then presented, in particular to finite temperature and density, hydrodynamics, QCD-like theories, the quark-gluon plasma and condensed matter systems. The textbook features a large number of exercises, with solutions available online at [www.cambridge.org/9781107010345](http://www.cambridge.org/9781107010345).

*Gravity* Joseph Midthun, 2022 A graphic nonfiction volume that introduces the force of gravity and its effects on Earth and the universe. Features include several photographic pages, a glossary, additional resource list, and an index--

*Introduction to Modified Gravity* Albert Petrov, 2020-07-27 This book reviews various modified gravity models, including those with modifications in the pure gravitational sector; those involving extra fields, that is, scalar-tensor and vector-tensor gravity theories; gravity models with Lorentz symmetry breaking; and nonlocal gravity models. The authors discuss both classical and quantum aspects of these theories. The book is unique in bringing together all the current alternatives to Einstein gravity in one source and serves as an excellent starting point for graduate students and other newcomers seeking an overview.

**Gravity** Laurentiu Mihaescu, 2019-04-15 Here is an addendum to the Prime Theory trilogy, a new book that is in fact a collection of the most important articles I wrote to complete this new

vision on physics. Gravity brings numerous clarifications and enhancements to my previous models of space, fields, particles and to the interactions described by the granular mechanics.

**Gravity, Particles and Space-Time** P I Pronin, G A Sardanashvily, 1996-04-12 This volume comprises original and review articles on the frontier problems of the gravitation theory, theoretical and mathematical physics. The volume is dedicated to the memory of Professor Dmitri Ivanenko who made the great contribution to the physical science of the twentieth century. H Goenner Classical and Quantum Gravity

Teleparallel Gravity Ruben Aldrovandi, Jose G Pereira, 2012-08-10 Teleparallel Gravity (TG) is an

alternative theory for gravitation, which is equivalent to General Relativity (GR). However, it is conceptually different. For example in GR geometry replaces the concept of force, and the trajectories are determined by geodesics. TG attributes gravitation to torsion, which accounts for gravitation by acting as a force. TG has already solved some old problems of gravitation (like the energy-momentum density of the gravitational field). The interest in TG has grown in the last few years. The book here proposed will be the first one dedicated exclusively to TG, and will include the foundations of the theory, as well as applications to specific problems to illustrate how the theory works.

*On the Nature and Origin of Time, Space, Gravity and Reality* Jonathan P. Sumber, DPM, 2016-04-30 This book is an in depth expose' of a system of physics, in which the atom is integrated within a more inclusive hybrid building block that combines dark energy and electromagnetic energy together within one system of physics that creates all the matter and the spacetime of our universe. The nature and the origin of matter, space, time, gravity, inertia, kinetic energy, and even consciousness are explained from within this hybrid system of physics, allowing the large-scale and the small-scale to be unified within it. To understand how the universe started out from an event that created the passage of time and three-dimensions of space out of a state where time passage and the three-dimensions of space did not previously exist, we must first come to understand the nature of other levels of order and dimensions that exist beyond the boundaries of

our perceived essence. This work explores some of those levels of order and dimensionalities that exist outside of our universe, while also revealing how these other dimensionalities take part in creating aspects of our universe as well as of our consciousness that we have not yet come to identify. If you've wondered how it is that the universe functions as it does on the large-scale level within the parameters of time and space as to the provisions of special and general relativity, while quantum particles have been shown to disobey many of those laws, this work will reveal a system of physics that bridges the gap between the large-scale and the small-scale as well as between time and space, which makes sense out of what had previously seemed to be a paradox.

**Slipstring Drive** Andrew L. Bender, 2006-11 Written for amateur physicists. This book takes you through the basics of string and M-theories so that you can embark on a faster than light voyage without violating physics. Andrew Bender proposes a method of travel by using gravity waves to completely isolate volumes of spacetime from the rest of the universe
