The History of Greyhound Racing in New England Robert Temple,2010-12-27 Chapter One Greyhound Racing Comes To New England Before pari-mutuel greyhound racing came to New England in the mid-1930s it had a long uphill battle to overcome the regions puritanical resistance to gambling and what many felt was a moral injustice inherent in the sport which was promulgated by the image of dogs hunting down rabbits in what was known as coursing. With these objections in mind it is necessary to write a brief history of the reasons why the greyhound first came to America and how greyhound racing came about and evolved into a flourishing sport. Later chapters will explain in depth how its critics and changing consumer tastes eventually brought the sport down. A Brief History With the great western migrations of the mid-nineteenth century and the increased use of farmlands to feed the growing populations came the problem of protecting the crops from jackrabbits was paramount. The solution came from the railroad workers and settlers, many of whom emigrated from England and Ireland and were familiar with the greyhounds and their hunting skills. They began importing greyhounds and selling them to the farmers where they became valuable economic assets by keeping the rabbits away from their cash crops. Another purchaser was the U. S. Cavalry, including George Armstrong Custer, who utilized their skills for scouting enemy movement and hunting down game. Sources say that Custer coursed his greyhounds the night before the 1876 Battle of Little Big Horn and that the dogs survived the next days battle. Meanwhile, the farmers, looking for entertainment diversions, started racing their greyhounds in what were called coursing meets in which the greyhounds chased a live rabbit. Gambling at these meets was extensive. Coursings popularity spread rapidly, and not just in the farmlands. There even were meets in such locations as the mill towns of Lawrence and Lowell, Massachusetts and, of course, gambling was part of the action. There was also a spreading humanitarian backlash to coursing . As Frank G. Menke wrote in the 1942 edition of The Encyclopedia of Sports, Opposition to this form of sport developed. The humane people of the state rebelled at the idea of killing of the rabbit just to perpetuate a gambling diversion. They implored officials to make coursing null and voidand this was accomplished. The Mechanical Lure The next giant step to overcoming these objections and turning greyhound racing into a sport that quieted many of the humanitarian objections was accomplished by a gentleman named Owen Patrick Smith. He is one of the key figures in the history of the sport and was profiled in a long Aug. 27, 1973 Sports Illustrated article by Robert Cantwell. O. P. Smith (1869-1927), as he came to be known, was once hired to organize a coursing meet to promote the city of Hot Springs. He then turned his full attention to the invention of a mechanical lure for greyhound racing and in 1910 was granted a patent for the Inanimate Hare Conveyor. His breakthrough came at Emeryville, CA where a boxing promoter and businessman named George Sawyer built a track in 1919, utilizing the new device. In his Sports Illustrated article Cantwell writes of the 1,600 pounds of machinery to carry a one-pound rabbit which at times jumped the rail. Smith had another problem with the dogmen, Cantwell relates. They were of the belief that their greyhounds would feel deceived once they knew they were not chasing a live rabbit and never run ag

He discusses areas like the importance of box position; when greyhounds drop in class; the importance of the corner call; the break; the time factor; moving up a grade; front runners; class dogs going bad; improvement; utilizing replays; and money management. Includes an analysis of dogs with specific characteristics, which impact whether you'll see them as contenders or no factor entries.

How to Win Bets on Greyhound/Dog Racing Cyril Robert, 2017-08-31 This is the sector of the business that has basically fallen apart at the seams and most of the problems can be equated to the greed of the bookmaker. There are too many races covered in the shops now and that comment governs both horse and greyhound racing. Coupled with real racing, there are also the virtual events to take into account, apart from the lottery style ball games which are encouraged in licensed premises. I don't like to harp on about the old days but betting shops were never busier, in midweek, than when there was half decent racing from two meetings on the quarter and half hour mark, that fitted in conveniently with one dog programme which kept clients happy.

Prediction Markets Leighton Vaughan Williams, 2011-05-15 How does one effectively aggregate disparate pieces of information that are spread among many different individuals? In other words, how does one best access the 'wisdom of the crowd'? Prediction markets, which are essentially speculative markets created for the purpose of aggregating information and making predictions, offer the answer to this question. The effective use of these markets has the potential not only to help forecast future events on a national and international level, but also to assist companies, for example, in providing improved estimates of the potential market size for a new product idea or the launch date of new products and services. The markets have already been used to forecast uncertain outcomes ranging from influenza to the spread of infectious diseases, to the demand for hospital services, to the box office success of movies, climate change, vote shares and election outcomes, to the probability of meeting project deadlines. The insights gained also have many potentially valuable applications for public policy more generally. These markets offer substantial promise as a tool of information aggregation as well as forecasting, whether alone or as a supplement to other mechanisms like opinion surveys, group deliberations, panels of experts and focus groups. Moreover, they can be applied at a macroeconomic and microeconomic level to yield information that is valuable for government and commercial policy-makers and which can be used for a number of social purposes. This volume of original readings, contributed by many of the leading experts in the field, marks a significant addition to the base of knowledge about this fascinating subject area. The book should be of interest to anyone looking at monetary economics, economic forecasting and microeconomics.
