The Project Manager's MBA Dennis J. Cohen, Robert J. Graham, 2001-07-09
Project managers are no longer judged by the technical success of their projects alone. They're also held accountable for their contributions to the company's financial goals. Yet most project managers don't have the business knowledge necessary to make project-based decisions that lead to bottom-line success. In this book, Dennis Cohen and Robert Graham, both former university professors and experienced project management consultants, provide the skills that, until now, could only be gained through a graduate degree and years of hands-on experience. Cohen and Graham walk project managers through basic business concepts such as value creation, accounting and finance, strategy, and marketing. They connect these concepts to the decisions project managers face every day. And they make it easy to apply the resulting solutions on the job through a unique business systems calculator. Readers can use the online calculator in conjunction with the book to understand how different project variables affect business outcomes, to determine the overall impact of proposed project changes, and to evaluate the economic results of many decisions they make. Cohen and Graham's principles apply equally to projects in business, non-profit, and government

organizations. And each one is illustrated through case studies drawn from a range of industries, including pharmaceuticals, the technology sector, even the winemaking business. Whether the mandate is to get new products to market, improve the infrastructure, or better serve customers and clients, this book teaches project managers how to make day-to-day decisions from an upper-management perspective. And it provides a blueprint for planning and pitching potential projects that demonstrates a higher level of business savvy.

Metal Nanocluster Chemistry Manzhou Zhu, 2023-01-18 Atomically precise metal nanoclusters occupy the gap between discrete atoms and plasmonic nanomaterials, and they offer intriguing physical-chemical properties that can be rationalized in terms of their quantum size effects and discrete electronic states. The atomically precise nature of their structures lends them well to structure-property relationship elucidation, making them particularly useful for informing the rational design of nanoclusters with enhanced performance. *Metal Nanocluster Chemistry: Ligand-Protected Metal Nanoclusters With Atomic Precision* provides a concise introduction to the

study of these useful nanoclusters. Beginning with an introduction to the fundamental concepts of, and prospects for, metal nanoclusters, the book goes on to highlight synthetic methods for controllable preparation. The subsequent chapters then highlight characterization, mechanism of size growth and structure evolution, and physical-chemical properties. Later chapters examine theoretical approaches for calculating and evaluating structures and properties. They also highlight the assembly of nanocluster building blocks and their practical applications. Drawing on the knowledge of its expert author, Metal Nanocluster Chemistry is a useful introductory guide to these exciting structures. Provides a concise introduction to atomically-precise metal nanoclusters, ranging from characterization and property investigation to applications Includes insight into both current trends and future potential, encouraging and supporting further development Holistically combines physical approaches with theoretical calculation methods

Growth, Cancer, and the Cell Cycle Philip Skehan, Susan J. Friedman, 2012-12-06

Learning Theory in the Practice of Management Development Sara Grant, Aharon Kfir, Stephen A. Stumpf, Mary Anne Watson, 1998-05-21 The workplace is the ideal environment for tying together management theory and practice and yet, classes in many regular management development programs are conducted away from the work site, and class sizes are so large that individual instruction is difficult to achieve. In this book, the authors seek effective ways to merge theory with workplace practice, and advocate the modular preceptor method whereby participants work together in dyads and triads with a preceptor acting as advisor and instructor. Unlike traditional management development programs which do not usually lead to behavior changes, the modular preceptor model has behavior change as the basic aim. Participants can remain at work while experiencing individualized learning, developing problem solving skills, and acquiring new knowledge which can be immediately applied to work situations. Various ways of learning, such as passive (lecture, case study, discussion) and experiential (role playing, games, sensitivity training) are examined. No single mode of learning can be comprehensive and adequate for all situations. The authors contend, however, that experiential learning is most effective for increasing the will and competence to learn and for using what is learned to change manager behavior. The purpose of the modular preceptor approach is not to present answers to specific managerial or organizational problems, but to help the participant acquire new problem definition and problem solving skills, and the confidence

to apply them on the job. This book also analyzes the contribution of the behavioral sciences to the philosophies and techniques behind management instruction, and examines the role of the university in management development and the future direction of MBA programs. For anyone concerned with meaningful and effective management development, this book is an invaluable resource.

Prospective Evaluation of Applied Energy Research and Development at DOE (Phase One) National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Prospective Benefits of DOE's Energy Efficiency and Fossil Energy R&D Programs, 2005-06-27

In 2001, the National Research Council (NRC) completed a congressionally mandated assessment of the benefits and costs of DOE's fossil energy and energy efficiency R&D programs, *Energy Research at DOE: Was It Worth It?* The Congress followed this retrospective study by directing DOE to request the NRC to develop a methodology for assessing prospective benefits. The first phase of this project—development of the methodology—began in December 2003. Phase two will make the methodology more robust and explore related issues, and subsequent phases will apply the methodology to review the prospective benefits of different DOE fossil energy and energy efficiency R&D programs. In developing this project, three considerations were particularly important. First, the study should adapt the work of the retrospective study. Second, the project should develop a methodology that provides a rigorous calculation of benefits and risks, and a practical and consistent process for its application. Third, the methodology should be transparent, should not require extensive resources for implementation, and should produce easily

understood results. This report presents the results of phase one. It focuses on adaptation of the retrospective methodology to a prospective context.

Planning the Development of Builders, Leaders and Managers for 21st-Century Business: Curriculum Review at Columbia Business School N. Capon, 2012-12-06

Business and management education has an important impact on business practice throughout the world. To a very large extent, possession of the MBA degree is a passport into the upper reaches of management, and CEOs of many major corporations have earned an MBA. It is a reasonable inference that the education received by these leaders and managers during their MBA experience has an important impact on the way that businesses throughout the world are led and managed and that major corporate decisions are made. The heart of the MBA education is the curriculum, and curriculum design is perhaps the most important strategic function for a business school faculty to undertake. In order to understand the many issues concerning this contemporary curriculum review, this book examines three related contextual domains. First, it details the long-term growth of business and management education. Second, it examines the major theoretical and empirical literatures on organizational evolution and decision making, paying special attention to decision making in institutions of higher education. Finally, the book describes the previous major curriculum review at Columbia Business School in the late 1950s and the subsequent changes that formed the curriculum that was changed in 1992. This book demonstrates what can be achieved by an institution that sets high

standards for its business education, and assists faculty and administrators in other schools of business and management as they contemplate revision of their curricula. In addition, it provides a prime example of curriculum design effort in one of the leading institutions worldwide. Finally, it will be of interest to scholars in several different fields, notably, higher education curriculum review, organizational decision making and long-run organizational evolution.
